Wilson-Hoyt Co's Concrete Benches

The accompanying illustration shows the concrete-steel bench construction of the Wilson-Hoyt Co., 1 Madison ave., New York City. The photograph was taken at the establishment of Charles Weber, Lyabrook, L. I., N. Y., where this type of bench has been very largely installed. The Wilson-Hoyt Co. undertake to build these benches entirely, or to furnish molds and other auxiliaries where-with florists can build them themselves. For simplicity in construction this type of bench has much to recommend it. Its solidity and finish is apparent in the illustration. Mr. Weber is highly pleased with his benches, and emphasizes the fact that he cut Imperial Carnations from them at Christmas with stems running to 42 inches in length.

Newport (R. I.) Carnation Notes

At the Stewart Ritchie place, the Carnations, which is the principal crop there, are at their best and look the pink of perfection. When benched the plants were smaller than usual, but were not rushed at the start and have since made up for the little time then lost. As to varieties: Pink Enchantress is grown in greater quantity than any other and has again proven satisfactory in every way. Winsor, in color, is not keeping up to the standard, and Viola Sinclair, which is of a pretty shade when it comes true, is given to coming streaky and will be discarded. White Queen is still grown on account of its free blooming qualities—in this particular having just what White Perfection, which is a better flower, lacks—and as a late bloomer the White Lawson gives good satisfaction. As a red or scarlet I should have said Beacon has given good satisfaction and will be more largely grown next year. The demand for crimson and yellows is so small that no place is found for them here.

At John Chase's, Pink Enchantress is also the leader, and of much the same shade, being tested here, is the Mrs. Chas. Knopf, but it has not proven equal. Winona has proved superior to Winsor and the latter will have to go, the streaky coloring being its chief defect. In whites, White Enchantress, White Lawson and White Perfection are grown but, as the latter splits badly, it is likely to be discarded. Beacon has proved to be all that is desired in a red Carnation and is grown more largely; in fact, to date, it has produced more blooms than any other variety on this place, the next freest being Winona.

Stewart Ritchie has commenced to build a new house for Summer Roses, dimensions 100x28; the work is being done by his regular help, his son James being in charge. The old range of plant houses is also to be remodelled. At the time of the recent blizzard some sharp work, in the way of placing supports, had to be done in the range to keep them from collapsing with their load of snow.

A new house, 55x18, is being built by John Chase for starting early vegetables and flower seeds.

ALEX. MACLELLAN.

New Carnation Lady Algy

We are informed by Mr. A. H. Wingett of Lenox, Mass., that this new Carnation, which we figured and described on page 176 of our Jan. 29 issue, bears flowers averaging about $3\frac{1}{2}$ in. across, which are carried on stems $2\frac{1}{2}$ to 3 ft. long.

Carnations at Berlin, Conn.

I have several new varieties of Carnations, but am sorry to say I am not able to place them on exhibition at the Pittsburgh convention, as my stock is not large enough this season to cut the required number of blooms. The following is a description of my productions that have received high honors wherever exhibited. Almira and Elizabeth are registered:

Almira, a large pink variety, a little deeper shade than Lawson, upright in growth, healthy, and a very free bloomer. The petals are fringed and the calyx is perfect, with a good long stem that holds the flower up in grand style; size, 3" to $3\frac{3}{4}$ ".

Elizabeth, a beautiful deep red, an ideal color, full center, not fringed, good stem and excellent calyx. It is a free bloomer, without surplus grass, does not turn dark or discolor after cutting, and is a most wonderful keeper. This Carnation is a marvel of beauty and good points; size, 3" to $3\frac{1}{4}$ ".

Tanagu, another deep red, a beautiful color, with fringed petals; habit like Harlowarden, but more robust in growth. It is a good healthy sort and an excellent keeper. The calyx and stem are perfect. It is a leader as a commercial red; size, $2\frac{3}{4}$ " to $3\frac{3}{4}$ ".

W. H. SHUMWAY.

Books Received

SWEET PEAS UP-TO-DATE.—W. Atlee Burpee & Co., Philadelphia, Pa.

As stated in the preface, the present book is a revise of a former work, issued by the same firm in 1903, entitled "All About Sweet Peas." This new brochure has been written by Mr. George W. Kerr, a gentleman who has had many years' experience in England, both in the growing and exhibiting of Sweet Peas, and who has been with the Burpee firm at their Fordhook Farms (Pa.) during the past two seasons.

In the introduction credit is given to the results obtained by Henry Eckford and Thos. Laxton of England, the former of whom started his great life work on the improvement of Sweet Peas in 1870, and the latter his endeavors in 1877; also to Silas Cole, originator of the Spencer type, and to W. J. Unwin who founded the Unwin type, both these men also of England.

The contents include chapters on Soil and Preparation; Sowing and Planting; Sowing Out of Doors; Staking and Trellising (this chapter illustrated by four of the most practical forms of trellises which have given entire satisfaction at Fordhook Farms); Cultivating, Manuring and Watering; Winter Blooming Sweet Peas (credit being given to Anton C. Zvolanek of Bound Brook, N. J., for his improvements in early flowering Sweet Peas); Seed and Slow Germination; Insect Pests and

New Carnation Princess Charming

H. Eichholz, Waynesboro, Pa., Grower.

Awarded a Preliminary Certificate at Pittsburgh

Blight; ending with a chapter on the Spencer types. A useful reference list of "Spencer" Sweet Peas, including those introduced up to 1909 and advance trials of varieties to be introduced in 1910, follows.

On page 33 will be found a list of the "Unwin" types of Sweet Peas, up to the 1909 introductions. This is followed by a "General List of Sweet Peas," occupying 22 pages.

A list of the best 12 varieties of "Spencer's" is followed by a similar list of the best 12 varieties of the older or grandiflora type. The best varieties for truckers and market gardeners are enumerated, and chapters on how to exhibit Sweet Peas and the use of these flowers for table and other decorations closes the informative part of the book.

A letter is given from the Rev. W. T. Hutchins, written from Santa Rosa, Cal., where he is now located, in which that gentleman conclusively shows that he is as great an enthusiast as ever on the Sweet Pea; he states that he is preparing to plant for next season 200 of the best sorts.

Carnation May Day

This is a variety introduced by the E. G. Hill Co., of Richmond, Ind., last year. The flowers are of an excellent shade of satin pink, mounted on a fine stem with strong calyx. It is a wonderfully free bloomer, 20 to 24 flowering shoots being found on most plants. It is considered to be a very fine commercial variety.

The Florists' Exchange Design Book

The new edition of the Design Book, now ready for delivery, will be found a decided improvement upon all former issues; it has been completely remodeled and contains 80 pages, covering a multiplicity of designs. It will be freely admitted the most valuable compendium of its character ever offered to the trade, as well as the cheapest. It is sold only in connection with a subscription for this paper; The Florists' Exchange two years and one copy of the Design Book, new or renewal subscription, for \$2.50.

Subscribers who have been patiently waiting for the new edition should receive their copy early in next week.

S. A. F. and O. H.

Change in Registration

S. Cockburn & Sons of Woodlawn, N. Y., make application to have the name of their Chrysanthemum, previously registered as Dr. Frederick A. Cook, changed to Mrs. Jane Cockburn. Public notice is hereby given of the application and unless objections to the change are received within 20 days from publication of this notice the change will be made.

H. B. DORNER, Secretary.

January 20, 1910.

[This notice was published in our issue of Jan. 29, the name then given being Mrs. Jane Cochran whereas it should have been Mrs. Jane Cockburn as now corrected. The variety referred to is an early pink, stock of which will shortly be placed on the market.—Ed.]

Resignation of Mr. H. B. Beatty

Owing to impaired health, Mr. H. B. Beatty, treasurer of the S. A. F. & O. H., tendered his resignation as treasurer at a meeting of the executive board held at Pittsburgh, Pa., January 26 to 28, 1910. The resignation was accepted by the board. The appointment of Mr. Wm. F. Kasting of Buffalo, N. Y., as the successor of Mr. Beatty, was confirmed. Mr. Wm. F. Kasting having been duly qualified according to Article II, section 3, paragraph (d), is now treasurer of the Society.

Following are the resignation of Mr. Beatty and the resolutions passed by the board.

Pittsburgh, Pa., Jan. 27, 1910.

Mr. F. R. Pierson, President,
Society of American Florists and Ornamental Horticulturists,
Fort Pitt Hotel, City.

Dear Sir: I hereby tender my resignation as treasurer of the Society of American Florists and Ornamental Horticulturists, to take effect as soon as my successor can be elected and qualified.

As a large majority of the directors of the Society are in the city, I trust that you may be able to get them together today or tomorrow to elect my successor, as I desire to turn over all funds of the Society as soon as possible.

Very truly yours,

H. B. BEATTY.

Fort Pitt Hotel, Pittsburgh, Pa., Jan. 27, 1907.

WHEREAS, The executive committee of the Society of American Florists and Ornamental Horticulturists has received the resignation of Mr. H. B. Beatty, as treasurer of the Society.

THEREFORE, BE IT RESOLVED, That in accepting this resignation we desire to place on record our appreciation of his long and valued services to the Society, and his unbounded liberality with the office. We part with him with the greatest regret, which we feel sure will be shared by every member of the Society. It is only our consideration for his impaired health, which we are assured is due to overwork in his many interests, that compels us, reluctantly, to accept his resignation at this time.

H. B. DORNER, Secretary.

The American Carnation Society

The nineteenth annual meeting of this Society at Pittsburgh last week shows every evidence of having given eminently successful results, both as to the proceedings and the meeting.

Carnationists, generally, should pay attention to the recommendations in President Albert M. Herr's address which we reported in full on page 168 of our previous issue. There were many suggestions embodied therein which, if carried out, will enhance the interests of Carnation growers generally and the Society itself, as well as enlarge the value of that organization in the public eye, and tend to the betterment of business conditions among its members.

Mr. Herr's suggestion that a tag be attached to each bunch of flowers sent into the market, the tag to be marked with the letters "A. C. S." and to be used only by paid-up members of the Society, is one that, if carried into effect, will make the Society known throughout the length and breadth of the country, and should prove a "hall mark" for good flowers.

The enlargement of the market for Carnations is to be sought in the vending of same at fair prices to the actual consumer. When Carnations wholesale at \$2 per 100, the final purchaser should not be charged from 10c. to 15c. each for the blooms.

President Herr's suggestion that a report from those who buy novelties in the first year of their dissemination be sent in to the secretary on Dec. 1 of the following Winter, giving their honest opinions of the variety from the buyer's point of view, is a good step forward. Reports from fifty growers from fifty different parts of the country on one particular variety should prove conclusive as to the value of said variety. As the circulation of these reports will be limited to the members of the A. C. S. only, their publication should largely augment the Society's ranks.

The next convention is to be in Boston and to be held conjointly with that of the National Flower Show. This will set back the hitherto accepted date of exhibition by some two months, but compensation therefor will be found in the greater interest and larger trade attendance.

Illinois State Florists' Association

It is hoped that many of the florists of Chicago and vicinity will attend the fourth annual convention of the Illinois State Florists' Association, to be held at the seat of the University of Illinois, Champaign—Urbana, Feb. 15 and 16. Preparations are well under way to make it one of the most interesting conventions of this growing young Society. The florists of the State ought to take advantage of this favorable opportunity to gain an object lesson in greenhouse building, and visit the College of Agriculture, as its equipment is model in all respects, and as nearly perfect as one could find.

The headquarters during the convention will be the Beardsley Hotel in Champaign. A banquet will be held there on Tuesday evening, Feb. 15, taking the place of supper, and beginning shortly after the regular supper hour. The sessions of the convention will be held in Morrow Hall, in the Agricultural Building, on the University campus.

The exhibition of cut flowers and novelties will be held in the foyer of the beautiful new auditorium. It has been decided not to hold a show of heavy trade exhibits, this being advised by the authorities of the University. All florists who have it in their power to show anything in cut flowers which will add to the attraction of the display are urged to lend their assistance.

A meeting of the executive committee of the Association met in Chicago this week to work up interest in the attendance at the convention and in the exhibition. The Association officers and local managers are working hard to make this convention a success and will appreciate the cordial support of florists from all parts of the State. The officers are: C. E. Gullett, Lincoln, president; Geo. B. Franks, Champaign, vice-president; J. F. Ammann, Edwardsville, secretary; Frank L. Washburn, Bloomington, treasurer.

The Coming Orchid Exhibition at Boston

We are publishing in this issue the complete Schedule of the exhibition of Orchids and other plants which is to take place at Boston toward the close of May next. Since the issue of the Preliminary Schedule, nearly one year ago, the classes have been increased from twelve to thirty-seven, and the possibilities of prize winning on the part of those maintaining small collections considerably widened: which is to be commended.

Classes 7 to 12 offer advantages to other than Orchidists and, as usual, the Massachusetts Horticultural Society will undoubtedly recognize at that time any exhibit of special merit in the way of new plants, which may be staged at that time.

Great commendation is due the officers of this progressive Society for the innovation, and it is our hope that the Orchid exhibition of 1910 will, in every way, be such a success as to warrant the holding of a second one, equally extensive, by 1915, if not before.

Look Out for 1911, Banner Exhibition Year!

Boston, again a favored city.
The National Flower Show.
The American Carnation Society Exhibition.
The American Rose Society Exhibition.

All going on at one time.

The selfsame week that the announcement was made (at the close of the National Flower Show, held at Chicago in November, 1909) of the likelihood of another show, to be held in the East, under the auspices of the Society of American Florists, The Florists' Exchange instituted an investigation, on its own account, as to the most desirable city in which to hold this show, and announced, as its conclusion, as may be recalled, that Boston offered greater advantages than even New York, and therefore was the logical strategic point. This decision has since been confirmed by the National Flower Show Committee, and the preparations already under way for the grand event give assurance that the most brilliant horticultural event to date will be that of the National Spring Flower Show of 1911.

As to patronage, not only will the citizens of Boston be present in great multitudes, but there will be such a gathering of horticulturists in that city as has never before been assembled.

Convention Western N. Y. Hort. Society

The annual convention of the Western New York Hort. Society opened its fifty-fifth annual meeting in Rochester, N. Y., Jan. 26. Eight hundred members were in attendance when President Wm. C. Barry called the meeting to order.

The main feature of the opening meeting was President Barry's address, which was characteristic of the speaker. After mentioning in a general way the work of the Society, asserting that it was up-to-date, enthusiastic and, despite its advanced years, showed no evidence of decay, the major portion of the address was given up to the supreme importance of irrigation, and the president warned the grower of fruits that in order to be successful he should inform himself of what his neighbors and competitors were doing, and conduct his business on business principles.

On the morning of Jan. 27 it was estimated that 1200 fruit growers were in attendance at Convention Hall. The morning session opened with an address by Professor H. Stewart, botanist, N. Y. State Experiment Station, on "Plant Diseases of Present Interest;" he was followed by Professor L. H. Bailey of Cornell, Professor Parrot, entomologist, N. Y. State Experiment Station, and others. The chairman of the Nominating Committee, David K. Bell, recommended the following nominations for officers:

President, Wm. C. Barry, Rochester, N. Y. Vice-presidents: S. D. Willard, Geneva, N. Y.; J. S. Woodward, Lockport; S. D. Wadhams, Clarkson; Albert Wood, Carleton; Edward Van Alstyne, Kinderhook; D. K. Bell, Rochester. Secretary-Treasurer, John Hall, Rochester. Executive Committee: C. M. Hooker, Rochester; H. L. Wiley, Cayuga; D. Tenny, Eaton; Dewane Boyce, Medina; I. H. Dewey, Rochester. The report of the committee was unanimously accepted.

The exhibits of fruit and spraying machines were of much interest. On the evening of the 27th the public was admitted and entertained with a lecture and lantern slides, showing the various methods of attacking diseases. Methods of spraying were given and much interest was evidenced by the general public in the up-to-date contrivances for the eradication of the pests peculiar to fruit and other trees.

It goes without saying that the fifty-fifth meeting of the Society stands out as the most successful one held to date.

H. B. S.

Does Man's Mind Have Power Over Plant Life?

Editor The Florists' Exchange:

In these days when so much is being said and written with regard to the influence of mind over matter, it has occurred to me that it might be profitable, if possible, to learn something about the power of the mind over plant life. For the sake of argument and at the risk of being called cranky, and that such ideas are absurd, I am going to say that within certain limits man's mind does have power over plant life. If such a statement is true then there ought to be a way to prove it.

It has been said of Burbank that he makes up his mind and wills what he wishes to get. Others have been credited with the same story. Whether this is true or not it does seem that man usually gets what he wishes for, within certain limits. How easy it is to weave a plausible even if somewhat romantic story out of the development of some of our florists' plants of today. Take, for instance, the *Neprolepis* tribe. How remarkably well it has responded to the touch of man. Does it take much imagination to think that somebody thought or wished for a more beautiful form than *N. exaltata*, and thus *Bostoniensis* came into life? After *Bostoniensis* how easy to wish for a more wavy, or curled, or crested, or dwarf, or lighter green, or darker green, or in fact any of the beautiful forms such as are now in existence.

Again, take the *Carnation*—look at the *Fisher* tribe, are they all accidents? Mr. Fisher sent out Mrs. T. W. Lawson, a beautiful dark pink. Very soon somebody wished a white, a red, a light pink, a variegated, and lo! here they come.

The same may be said of *Euchantress*, or the *Killarney* Rose. Doubtless the introducers being so well satisfied, did not dream of a white *Killarney*. Of course, it will be argued if there is anything logical in the above the same thought should bring a crimson, yellow or any other shade of *Killarney*. As I said before, there are certain limits. Now, Mr. Editor, in conclusion I would like, if possible, to have the gentlemen who introduced the varied forms of *Neprolepis*, and the different colored *Carnations* to say through your columns whether such a form, as it appeared, was according to their wish, or was it only that a different form appeared and they simply selected it. It would at any rate be of value to science if these gentlemen would put on record just under what conditions these forms appeared.

College Park, Maryland.

THOS. H. WHITE.

How Can the Condensation be Stopped?

Editor The Florists' Exchange:

We have recently completed a potting shed along the end of a block of greenhouses, 18 ft. wide, 12 ft. of the roof of which is sheathed with common Virginia pine boards and covered with prepared roofing; the balance is a row of hothead sash, under which we have a propagating bench. We maintain a temperature inside of from 52° to 58°, but the condensation on the sheathing is something fierce, dripping everywhere, and soaking the sheathing which will be rotted out in a short time. Can you, or some of your many readers, tell us the most effective and least expensive remedy. The heated portion of the shed, where the condensation occurs, is 150 ft. long.—H. J., Md.

Those Papers on "Exhibitions"

Editor The Florists' Exchange:

I see by my friend MacLellan's report of the proceedings of the Newport Hort. Society, at its last meeting, that a committee was appointed to prepare papers on all the leading phases of that all important subject, "Exhibitions." Considering how peculiarly and well fitted each member of that committee is to treat on the subject given him, I am sure many others will feel just as I do that at least the gist of these papers should appear in the "EXCHANGE."

Mr. Robertson, who has been given the subject, "The Mission and Utility of Exhibitions," will not merely state that exhibitions are sometimes a source of financial benefit to members and others. Mr. Hammond, whose paper will treat on "How to Prepare for the Exhibition," will not confine himself to a statement of how best to fill out an entry blank. Mr. Butterson knows a great deal more about "Staging Exhibits" than to content himself with telling how to carry a large *Palm* or *Fern* into the hall and how to stick a few *Dahlias* effectively in a large or small vase. Mr. Gardner's experience in judging is such that a great deal more may be expected from him than an assertion of his conviction that the very best in its class should (if the rules have been complied with) get first prize. Mr. Forbes will, without doubt, tell of some other and more effective method of increasing the attendance than free admission or open Sunday exhibitions.

Admitting the foregoing, Mr. Editor, help the cause by opening your pages to whatever our friend, your Newport representative, sends you with reference to this matter. D. M.

Parasitic Plants on Rhododendrons

Editor The Florists' Exchange:

It was with pleasing gratification that I read the valuable contributions by your esteemed correspondents, Mr. Thos. Meehan and others, which my articles of Jan. 8, page 53, on "Parasitic Plants on Rhododendrons," had called forth, all of which, in the main point at issue, substantiate my views on the subject. Your able exponent, Mr. J. P. Pedersen, touches very briefly on mycorrhiza or fungus roots, which cannot in the true sense of the word be called, or looked upon as having

any parallel with parasitic plants. The fungi which form the mycorrhiza belong to those kinds which usually occur in the humus of woods and fields. They do not seem to act in any way injuriously to the root, but, on the contrary, stimulate it to renewed growth, and, no doubt, the root in its turn stimulates the growth of the fungus, nourishing it with its own sap, and, as Mr. Pedersen says, the partnership is beneficial to both kinds of plants, but the fungi cannot justly be termed a parasite in this case. Scientists tell us that lichens are not single, independent plants, but are constituted by the union of a fungus and an alga, so intimately associated as to appear to form a single individual. The alga, in virtue of its possessing chlorophyll, can supply the fungal constituent with organic food, while the fungus provides the algal constituent with water and mineral salts. At first sight, therefore, the association seems to be one of mutualism, i. e. a partnership fraught with equal benefits to the parties associated. Yet we are again told that while the fungus cannot exist apart from the alga, the latter can and does live independently. How widely distributed in Nature this arrangement of mycorrhiza is may be gathered from the fact that all our forest trees, such as Oaks, Beeches, Birches, Alders, Conifers, and also *Poplars*, *Willows* and *Limes*, are provided, where they grow in humus, with mycorrhiza. They will, however, develop normal rootlets and root-hairs if they are grown in purely mineral soils. While not being aware of any parasite indigenous to the root of the *Rhododendron*, yet this discussion has, as all healthful discussions will do, opened up a wider field of vision and has probably given us the clue to the expressions of my nurserymen friend which opened up this series of articles, and was a natural view to take, if the fungus or mycorrhiza root was looked upon by him as a close parallel to parasites; yet it is evident that there can be no analogy between a plant that is distinctly dependent and plants that are inter-dependent and independent.

Like your correspondent, Mr. Scott, I have handled *Rhododendrons* by the thousand, aye, by the hundred thousands, growing them from seed up through the various stages of development, grafting hybrids by the ten thousands, until ready to ship to America, and all over Great Britain and Ireland; yet I have not seen them grow in marl, but do not doubt the statement made by this gentleman, as clay predominates over lime or chalk in a marly soil. I have also been informed by letter, in regard to this discussion, that green manure should not be used to plant *Rhododendrons*. We all know, or should know, that green manure, during the process of fermentation, is injurious to nearly all vegetation.

A leading English statesman, on lecturing in the interests of agriculturists, told them that the best way to manure their land was to "manure it with brains," and I think that this aphorism is equally applicable, and probably more so, to horticulturists, as their profession opens up a wider and more varied field for the use of this necessary, yet sometimes too scarce a commodity.

—INQUIRE.

Why the Small Rose Grower Should Join the American Rose Society

A paper read by A. Fahrenwald of Roslyn, Pa., before the Florists' Club of Philadelphia, Feb. 1, 1910.

I have often wondered why so many small Rose growers give the Rose Society the cold shoulder. The large Rose growers all seem to be members. Why should this be so? Has the small grower no benefit to expect as a member of the American Rose Society, or is he prejudiced against it? Surely there is no cause for either of these reasons. The most of the small growers have not come near enough to see and understand. It is time then that they make an earnest effort to see and understand, and by doing so they will soon recognize the value of this organization in the many tasks which it endeavors to fulfill, every one being of vital interest to every Rose grower.

As I said before, the large growers are all members. Now, did you ever stop to think why they are? Surely not for the fun of it. They are all too shrewd business men. The money they invest this way must bring them some interest. "Light your pipe," as they say, and think this over, it is worth while.

It is high time that we, as Rose growers, took notice that the *Carnation* is pushing the Rose into second place in the favor of the public.

It is impossible for me, in this short paper, to go into all the different subjects of usefulness of the American Rose Society, to pluck them apart and hold them up to the searchlight. I will merely confine myself to the yearly exhibition and convention, its value as an education and inspiration.

On March 16, 1910, the yearly exhibition and convention will be held in New York City. Now, fellow members, this gives you a fine opportunity to realize the value of such an exhibition as an education and inspiration. Most of us think we grow better Roses than the other fellow. An exhibition will open our eyes. Roses that at home we thought wonderful often diminish decidedly in our estimation when placed in competition with others. Here is the education if we want to see it. We are in this business for money. If Roses are not up to standard, we will not realize on them as we should. This

may be a bitter pill to swallow, but it should be the inspiration for a greater and continued effort, which will easily pay in the future for the little time and money it took.

At the exhibition we also have an opportunity to see, alongside of the old standards the new varieties. The originators of these new varieties are sure to be at hand, each man eager to explain the strong points of his particular favorite—his rival only too eager to point out the flaws. There, too, you will see many of the brightest lights in the Rose growing profession, from whom you can get valuable pointers. You have the great pleasure of meeting old friends. Besides, the social side of these gatherings has a charm which no one who has ever attended can forget.

While we can read in our trade papers the essays read at the convention meetings, yet we miss the after discussions and criticisms, which are a most important and essential part of such meetings. Then, too, the enthusiastic arguments of some members, the hair-splitting arguments of others, the sound advice of those who confine themselves strictly to business so that one fairly sees the dollars sticking out, all combine to make these meetings serve as food for thought for many a day thereafter.

To make this Rose Society a success, it needs the interest and enthusiastic support of all Rose growers, large and small, over the entire country.

Every one who grows Roses for a living should feel it a sacred duty to belong to this Society; in fact, every one interested in Roses should belong and help bear out the motto of the Society, "A Rose for every home, a bush for every garden." Then, anyone growing Roses for a living, who cannot or will not be interested in the work of this Society will be the one who continuously kicks about bad times and prices, and howls about the "good old times." He is a dead one—"Peace be to his ashes."

George Barnes

George Barnes, one of the old pioneers of Kosciusko County, died Jan. 22 at the county infirmary near Warsaw, Ind. For many years he was engaged in the culture of flowers here. He was aged about 80 years. His wife died five years ago.

I. J. Nudd

In the death of I. J. Nudd, who passed away Jan. 22 in a local hospital, Sioux Falls (S. D.) lost one of her unique characters. Mr. Nudd came here some years ago and engaged in the florist and truck garden business. For a number of years his health has been poorly but he had continued in his work as a florist and gardener and had a small stand near the John Olson grocery store on South Main ave.

Elias Emery

Elias Emery, a resident of Omaha, Neb., was born in Circleville, O., Feb. 26, 1836. He came to Omaha in 1862 and was a member of the territorial legislature in the early '60s. He engaged in the real estate business until 1884, when he retired from that occupation and devoted his time to horticulture, in which he took a great interest. He made a special study of the Rose and wrote a number of treatises on that flower that attracted attention throughout the country. He was also the author of numerous works on horticultural subjects.

He leaves three sons, Charles J. of Omaha and Solon and Elias of Cheyenne, Wyo.

William Scott Munro

It is with regret we announce the death of William Scott Munro of Vallejo, Cal. The deceased was born at Montrose, Forfarshire, Scotland, in 1835, and served his apprenticeship with a noted grower of Heaths in Perthshire, from there going to Methvens' Nursery in Leith Walk, Edinburgh. He was foreman there for seventeen years, and became famous as a grower of Ericaceous plants, propagating and growing them by the thousand. After leaving Methvens Nursery he came to America in the sixties and had charge of the Mitchell and Brandreth estates at Tarrytown, N. Y. He came to California in 1879 to take charge of the conservatories in Golden Gate Park, San Francisco. After being there for several years, he started in the nursery business in Napa County, finally retiring and settling in Vallejo, where he started a small nursery and, true to his first love, had several thousand *ericas* and *epimiss* in all sizes at his place when he died.

His wife died about a year ago. He has five sons and three daughters, two of the sons following their father's profession, William being superintendent for C. T. Crocker, and Thomas in charge of the forestry work for the Spring Valley Water Co., San Francisco, Cal.

The Promenade, Fort Pitt Hotel, Pittsburgh, Pa.

This is where the ladies at the A. C. S. Convention were generally to be found. The doors at the end lead into the English Banquet Hall, where the exhibition and banquet were held.

Report of Final Proceedings of The American Carnation Society Nineteenth Annual Meeting Pittsburgh, Pa., Jan. 26 and 27, 1910

Thursday Afternoon Session

The meeting opened with the reading of a paper by Fred Burki, which was reported on page 176.

Mr. R. T. Brown of the Cottage Gardens Co., Queens, N. Y., who was invited to discuss Mr. Burki's paper, said that at Cottage Gardens a lot of plants had been forced out into the field through the fact that the greenhouse area at Cottage Gardens had been increased but it had not been practicable to increase the frame area, and for that reason it had been necessary to plant out in the field. In his opinion the field plants gave about as satisfactory results as those planted in the frames under glass. In explanation of the method of growing in frames he said the plants were practically out in the open. The glass was raised about 18 inches and was only used to give protection from the heavy rains. The plants were fully open to the wind and sun. Such protection was really the only use for the frames. Heavy rains on the Long Island soil were apt to cause stem rot in the plants.

Election of officers resulted as follows: Fred Burki, Pittsburgh, president; Allan Peirce, Waltham, Mass., vice-president; A. F. J. Baur, Indianapolis, secretary (re-elected); and F. B. Dörner, Lafayette, Ind., treasurer (re-elected). The election was by secretary's ballot, there being no other names in nomination. The officers elected, in brief addresses, thanked the members for the honor done them and promised hearty support in the work of the Society.

F. R. Pierson was unanimously elected a director for the term of five years, and made suitable acknowledgment.

Election of Judges was next proceeded with. Four were to be elected, and there were seven nominations—W. W. Coles, W. J. Vesey, Jos. H. Hill, E. A. Stroud, W. N. Rudd, Frank H. Traendly and Eugene Dailledouze. Mr. Dailledouze declined his nomination, but upon pressure being brought to bear upon him he agreed to stand. Upon a ballot being taken Messrs. Dailledouze, Rudd, Hill and Stroud were elected.

The president announced that he would appoint the following as the committee on introductions, recommended in his address: Joseph H. Hill, Richard Witterstaetter, Fred Burki, Eugene Dailledouze, M. A. Patten, W. N. Rudd, J. H. Dunlap, J. A. Valentine, S. S. Skidelsky and F. R. Pierson.

As a committee on final resolutions President Herr appointed the following: W. P. Craig, M. A. Patten and H. B. Dörner.

The case of John Reimels of Woodhaven, N. Y., who

had been taken seriously ill the previous evening, was mentioned, and President Herr suggested that members of the Society visit him at South Side Hospital, where he had been taken.

Asked for his views on the premium list for the next exhibition in Boston, F. R. Pierson said the matter had not yet been considered in detail. The National Flower Show Committee, he said, had only taken up the general premium list. He presumed the Society's executive board would take up the matter of the Carnation list with the committee, and that it would be arranged with care. President Herr also pointed out that the preparation of the schedule was one of the duties of the board of directors.

On motion of J. A. Valentine the secretary was empowered to hire an assistant at the Society's exhibitions, with remuneration at \$5 per day.

The paper by W. H. Breitenstein, on "A Carnation, the People's Flower," in the absence of the author was ordered to be printed in the proceedings.

The convention then adjourned.

Banquet to the A. C. S.

The banquet tendered by the Pittsburgh Florists and Gardeners' Club to the members of the American Carnation Society and guests, on Thursday evening, Jan. 27, at the Fort Pitt Hotel, was a huge success.

The brilliant scene presented in the banquet hall was one which will never be forgotten, and which could, perhaps, never be equaled, except in the same place, and, it might truly be said, with the same hosts. This should not be considered as a reflection on the florists of other cities who have entertained and will in the future entertain the different societies, but circumstances out of the ordinary combined to make the banquet setting one of extraordinary beauty. In the first place the English Banquet Hall of the Fort Pitt Hotel was placed at the disposal of the Pittsburgh hosts, and in the second place almost the whole of the exhibits were available for use in the decorations, this being due to the fact that the banquet hall was also the exhibition hall. At about noon on Thursday clearance of the exhibition hall was commenced and by evening the apartment had again assumed its banquet hall appearance and the decorations had been completed. Round tables of liberal proportions were used, and on them were huge centerpieces of the exhibition Carnations, the long stems of which allowed of every decorative effect in Carnations imaginable. Fountain and spray arrangements, baskets, plateau, columnar formations and groupings were all executed by the Pittsburgh craftsmen in a manner which was most creditable. At each end of the hall were massive groups of Carnations, the solid effect merely broken by variety in the elevations of the vases, and a judicious use of Cibotium Ferns and other foliage plants. The grand lighting from the ceiling electroliters brought out the magnificent contrasts presented by the dark oak paneled wainscoting of the hall, the white table cloths and the handsome gowns of the ladies. The table of honor, the largest in the hall, was located at the center of the farthest side of the hall, and at it the officers of the Society and of the Pittsburgh Club were seated. The seating of the guests was well arranged, and at each table was a jovial party.

The Carnegie Tech. Glee and Mandolin Clubs furnished vocal and instrumental music, and there were several excellent vocal solos. The menu was very fine; and the menu cards were most artistic.

After coffee had been passed President Herr proceeded to make presentation of the A. C. S. medals awarded at the exhibition. In acknowledging the receipt of the gold medal F. B. Dörner, Jr., said, "It is quite an honor to me to take home this medal, one we have won with our own flowers grown and raised by ourselves. I know that father will feel very proud when I bring this token home to the State of Indiana where Hoosier Lad and the Hoosier boy who raised it are living now." Richard Witterstaetter on receiving the silver medal said, "I can assure you it was not the one I was after, but we saw the different entries and realized that Hoosier Lad was the best, consequently we were satisfied we were not in the ring." Eugene Dailledouze, on taking his bronze medal, which he won with White House, said, "I feel like one who 'also ran.'"

William Falconer was then introduced as toastmaster, and his fitness for the office was well demonstrated by his many introductions during the evening. His first duty was the reading of a telegram from the Boston Gardeners and Florists' Club congratulating the Society on its convention and stating that pork and beans had been put in soak for 1911.

The toastmaster's first call was on President A. M. Herr, to tell "What the American Carnation Society is For, and What it has Done." Mr. Herr in response: "We came here seventeen years ago with an exhibition of 40 to 50 dozen flowers, all one-third of the size you see today. In this fact you see the seventeen years' growth and influence of the Society before you. I hope seventeen years from now my boy will be in my shoes and able to report the same progress."

From the "Wild and Woolly West" the toastmaster called S. A. F. ex-President Valentine to speak for the S. A. F. Mr. Valentine said: "It is only about four weeks ago since I had to telegraph congratulations to President Pierson, and I thought then I had 'laid down' official life in the Society, but it really has not been so with me. I am before you now as the personal representative of President Pierson who, as a matter of fact, is not only president of the S. A. F., but vice-president of the American Rose Society, and chairman of the National Flower Show Committee—and he is nervous. As to what I think the S. A. F. has done I do not believe I can segregate its work from that of the kindred societies. We know what the development in Roses and Carnations has been. I should consider the chief accomplishment has been the improvement in the ethics of our calling. We no longer believe that a man is an enemy of ours because he is in the same business. The more we get together the more we think of our fellowmen, and to me these societies count for much."

The subject "Our Boys and What We are Going to Do With Them" fell to P. S. Randolph of Pittsburgh. He said: "Our boys, as Carnation growers, will have a softer time than their fathers did. We have flowers now as large and fine as we want them, so what are the boys to do? A man likes to have boys follow his footsteps. We have the most entertaining and interesting business in the world. No one who has to labor experiences the same entertainment in his work that we do. We owe a great deal to the S. A. F., and the different societies have all done their share of good, but the credit really belongs to the S. A. F. Our boys have a very, very bright future before them."

The toast, "The Pittsburgh Florists and Gardeners' Club" was referred to El. C. Reineman, as the man who had done more for the Club than anyone else. Mr. Reineman said: "Florists' clubs are good. If there are only two or three florists in a town they should have a club. Before our Club was started there was a lot of jealousy. The florists hardly recognized each other, but since the Club was formed there has been nothing but brotherly love. A whole lot depends upon the officers of a club. As Mr. Falconer told you, I became connected with our Club and they elected me president and kept on doing so, and the Club did not make any progress then we got a gentleman from the East and he helped us until he died. Then we got another one from the East, and from that time on we made more progress. He made the meetings interesting by bringing plants and flowers. He could make them talk, and we gained considerable knowledge, and the Pittsburgh boys, I think, are the equal of any in the country. This gentleman is our oracle, and we place great faith in him. The gentleman referred to is our toastmaster."

"Next year, in Boston," said Mr. Falconer, "we shall have the best show ever held on this continent. Mr. F. R. Pierson is at the head of its committee and he will tell us all about the National Flower Show." Mr. Pierson in response said: "I have always considered Mr. Valentine as one of our substantial citizens and a man of his word, but he doubtless thinks he drew vividly on his imagination this evening when he called himself a dead one—unfortunately for him I must confirm his statement, for when on New Year's Day he telegraphed me his congratulation upon my entry into office he concluded with the quotation, 'The king is dead, long live the king.' I feel that as president of the S. A. F. I have a difficult position to fill. I cannot excel the administra-

House of Lady Bountiful

At Robt. Boyce's, Utica, N. Y.

House of Enchantress

At Robt. Boyce's, Utica, N. Y.

tion of last year, unless I have Mr. Valentine's hearty co-operation. He has done a great deal to lift up our Society. I have been asked to say something about the National Flower Show, what the object of it is and what it will do for horticulture. It seems to me that the show presents a great opportunity to elevate horticulture to a higher plane. The national show of 1908 did a great deal of good. We are going after the work now, and with the hearty co-operation promised it looks as though we are going to have a successful show. More than \$10,000 have been subscribed, so that the fund is about sufficient to carry on the work. I do not think you have any idea what the cost was to install the last show. It was over \$25,000. It was ably handled, and produced a profit. It is our object to give you, in Boston, a novel show—a Spring show. The premium list calls for over \$10,000 as it now stands. This list has not been padded; it is made to produce the goods. There is no section where you can gather as interesting a collection of plants as in the New England States. I believe we can evoke a large educational interest among the florists as well as the private people of this country. We are assured of having your support, and we are to have the hearty co-operation of the Mass. Horticultural Society. As to what the National Flower Show will do, it is going to elevate our profession. We have a strong organization, and I am proud to be a member of the S. A. F. We have a calling, too, we can be proud of, and the forthcoming show will be a memorable one in our history. They have such shows in England and Belgium, and it is our hope that this show will be repeated right along. The best augury is the success we have had, and I trust the Boston show will be the best we have had in these United States."

W. F. Kasting of Buffalo was next introduced as "a great politician," and as one who would tell how the Carnation had figured in politics. Mr. Kasting expressed some surprise at being called upon to handle such a subject, but nobly responded. "It is an actual fact," he said, "that Carnations have played a role in politics." He told of a case where he had furnished Carnations to be sent, with a tag attached, to a gentleman running for office as a councilman, and those Carnations "broke the slate." Continuing he said, "I well remember that they call Peter Reinberg the 'Carnation Alderman,' and when he got that name he was the successful candidate. Best of all, when people take office—I don't know whether any of you visit the city halls when people take office—outside, perhaps, of American Beauty Roses most of the flowers are Carnations; indeed, I might almost say more Carnations are used than anything. Send your politician your Carnations and you will do well."

"Our Trade Papers" was the next toast, and it was ably responded to by H. B. Howard.

H. M. Burgoyne of the Pittsburgh Chronicle-Telegraph made a most suitable response to the toast "The Pittsburgh Press." "Whenever a reporter comes to you on horticultural subjects," he said, "tell him the truth. If you think he cannot remember it, write it down. When you see a ridiculous thing in a paper it is your fault." Speaking of florists, he said, "The influence of flowers is great. Whoever hears of a millionaire florist running away with another man's wife; or eloping with a ballet girl?"

The toast "Our Ladies" was ably responded to by Judge W. J. Vesey of Port Wayne, Ind.

"Our Ambitions" was a subject which the toastmaster called upon F. B. Dorner, Jr., to handle. Mr. Dorner said: "I have always been under the impression that the greatest aim was to get the A. C. S. gold medal, and having won it the next aim was to get another. These exhibitions of the A. C. S. stimulate all the growers to place on the exhibition table a vase of Carnations better than he has ever exhibited or grown before. Speaking for my own concern I must say we have won our first gold medal after years of work. Our ambition now is to bring forth even better flowers than we have ever grown before. I think that, in a great measure, everything we have done is due to the influence of the A. C. S."

Dr. John Brashear was then, as the only Canadian representative, called upon to say something for Canada, but his thoughts ran to flowers, and he made a splendid oration which was greatly enjoyed.

To Robert Craig fell the duty of responding to the toast "The Old Boys." Mr. Craig made one of his characteristic addresses, prefacing it by saying that he thought it rather a big subject for one evening. He also extolled the efforts of the Pittsburgh florists to provide a liberal entertainment such as they had. "But of course," he said, "when we come to Pittsburgh we expect something extra." He paid a tribute to Mr. Phipps of Pittsburgh, who had spent money in horticulture nobly. Reverting to the toast, he said he had in the last 30 years, been honored with the acquaintance of many of the leading men engaged in horticulture, and should he attempt to allude to all of them he would take up too much time. He felt though that he should mention a name or two. The first was the late John Thorpe, from whose enthusiasm sprang the S. A. F. The speaker spoke lengthily in eulogy of Uncle John and his unselfish devotion to floriculture. The late Peter Henderson was next mentioned, and Mr. Craig spoke at length upon his devotion to his work. Of Wm. R. Smith, who is still in the flesh, he spoke lovingly, quoting, as applicable to him, Elbert Hubbard's paraphrase "Whom the God's love die young, no matter how long they live." The late Wm. Scott was also lauded and his work commended. Lastly he spoke of Edwin Lonsdale, whose work had carried him to another field. As a memento of Mr. Lonsdale's personality Mr. Craig proposed that a "verse" or two of "The [Grand Old] Duke of York" be sung by the company, whereupon the gathering sang uphill and downhill for several minutes.

L. B. Judson of Ithaca was the next speaker, and his subject was "Horticulture in the Colleges and Experiment Stations." It was lengthy but very interesting. In the course of Mr. Judson's address he made some strictures on Luther Burbank, and, after concluding, Toastmaster Falconer took up a fine Carnation bloom from a table and said, "If Burbank had produced anything as lovely as this Carnation we would forgive him for everything."

T. P. Laughans of the Pittsburgh Cut Flower Co. spoke to the toast of "Our Visitors," and extended a welcome to all to visit Pittsburgh again.

After a vote of thanks to the management of the Fort Pitt Hotel for courtesies extended, which included the free use of both exhibition and meeting halls, M. A. Patten presented final resolutions expressing the thanks of the Society to the Pittsburgh Florists and Gardeners' Club for its hospitality and many courtesies; to the Ladies' Auxiliary, and to all others who had helped to make the convention a success.

It was nearly one a.m. before the guests departed.

A Few Shavings Picked Up at the Pittsburgh Convention by a Westerner

Harry Balslev of Detroit says that he fully agrees with Jos. H. Hill that the young Carnations should be grown in pots.

There is a rumor that a tempting offer was made Judge Vesey to talk on "Our Ladies" in Boston, in 1911.

Ohio isn't a bit afraid of the East, but it is Indiana that is always butting in.

If you want hints on "How To Be Successful as a Toastmaster" Wm. Falconer is your man.

The Chicago delegation came to Pittsburgh in two separate shipments. The Cream and Garden City "Dry Martini's" took the 5.30 train, while the Apollinaris Trio went on the 8 o'clock—and George Amus caught the 5.30.

Prof. Judson must have had a piece of "Burbank's Wonderberry Pie" just before he entered the banquet hall.

When a man can get you interested in as dry a subject as "Dormant Canna Roots," at a Carnation Convention, he must be a good one. We have proof that Harry A. Bunyard even went as far as to take orders.

C. L. Washburn, of Carnation O. P. Bassett fame, strongly recommends the installation of a moveable stairway all over Bakerstown.

Where were C. W. Ward, Peter Fisher, J. C. Vaughan and E. G. Hill? How could they afford to be away?

Whenever you can duplicate that vase of 100 Beacons, staged by the Cottage Gardens Co., you are a real Carnation grower.

The souvenir spoons given to the visitors at the Heinz's Pickle works saved the Fort Pitt Hotel about \$47 worth of silverware.

To listen to Robert Craig is indeed a privilege.

I wonder if Boston fully realizes what a job the boys have on their hands?

Here is a puzzle.—If it took 20,000 Carnations to elect Peter Reinberg as an Alderman in the Windy City, who will be Mayor of Buffalo some day? Good luck, Bill!

The fact that Frank Traendly was practically the only wholesaler in the party which visited the Heinz establishment should prove that only the grower is really interested in the subject of "How to Pickle Successfully."

The few words E. C. Reineman spoke about the good that comes out of a Florists' Club should be put in print, and a copy sent to every grower who doesn't belong to a club.

Witterstaetter's beautiful pink seedling grows on you the more you see of it, that's why it was named after J. A. Valentine.

"It may be a good thing, after all, that we meet in Boston next year—it will give them a chance to see 'Bright Spot,'" said Nic Zweifel as he was boarding the Schlitz special for home.

Why was W. N. Rudd sent home without his dinner? He certainly earned it.

If John out in Schenley Park gets those longiflorums in for Easter we (the writer) buy a silk hat.

August Poehlmann and several other enthusiasts contracted a severe cold looking for a vase of Bay State, but the doors of the Buffet Bazaar closed promptly at 11 o'clock, so they sat, waited and shivered until Thursday morning.

It almost takes an expert to call the white Carnations by name.

Five flowers of Hoosier Lad, taken from the centerpiece of one of the banquet tables and brought to Illinois are still in good condition, and this is Saturday, 11 p.m.

If more growers were able to realize what they would gain by attending the Carnation Society's convention more would come.

Because the convention was a success without Baby Foley doesn't say that we haven't missed him.

After listening to F. R. Pierson, some of us have started already to lay up for carfare to the Bean City.

Ed. Winterson does think it a shame to have all that beautiful marble in the ceiling and on the walls of the basement of the Fort Pitt Hotel used for a Rathskeller.

There isn't one of us who left Pittsburgh with anything but the most pleasant recollections of the hospitality and kindness shown by everyone of the Pittsburgh boys—long will we remember all of them.

THAT subscription to F. E. you have been thinking of taking out for a brother florist! Why not send it in now?

Members of the Pittsburgh Cut Flower Co. At the left is Treasurer W. A. Clarke; next is Secretary T. P. Laughans, and next President Fred Burki.

An Enjoyable Visit

A most pleasing feature of the entertainment of the visitors to the A. C. S. Convention at Pittsburgh was the trip on Friday, January 28, to Bakerstown, Pa., where is located the plant of the Pittsburgh Cut Flower Company. The party, numbering about 100, left the Fort Pitt Hotel at 9.30 a.m. and were placed on two special cars. After a ride of about an hour and a half they arrived at Bakerstown, which is about 1600 feet above sea level, where they embarked on huge sledges—really converted hay wagons—and were taken to the establishment of the Company. After a run through the greenhouses in both sections of this large plant, they assembled in the packing room where an excellent lunch was spread and an hour very pleasantly spent. Acknowledgement of the Company's hospitality was shown in a vote of thanks and hearty cheers. The return trip was made in the same way, a little wait at the station being enlivened by a snowball battle.

N. Y. and N. J. Association of Plant Growers' Annual Dinner

The second annual banquet of the New York and New Jersey Association of Plant Growers was held at the Hotel Astor on Wednesday evening, Feb. 2, and was well attended. One of the prettiest dining rooms in the hotel was used for the affair, and its beautiful setting, with moonlight effects, added not a little to the enjoyment of the evening. For an hour before the dinner call the guests were assembled in the gallery and indulged in social intercourse to their heart's content. An excellent orchestra furnished music, both before and during the dinner.

The tables were nicely decorated, Orchids and Lily of the Valley most prominent in the centerpieces. The menu was of a high order, and the dishes were served in the true Astor style.

After coffee had been passed Julius Roehrs, Jr., who

presided, introduced as toastmaster Fred L. Atkins of Rutherford, N. J. A silent toast, all rising, was then given to the memory of John Scott, Herman Dreyer and E. V. Hallock, members of the Association who had passed away within a year.

The toastmaster made a happy opening address. He congratulated the members upon the success of the organization and complimented them upon the number of ladies present. He thought the ladies should enjoy the pleasures as well as the troubles of the growers' business. While he did not think any of them that evening showed evidence of trouble he considered their presence most gratifying. The first speaker, he said, would be a gentleman who, although a German, had made his mark in growing Scotch Heather, Anton Schultheis.

Mr. Schultheis spoke of the advantages which had accrued to the organization through its social meetings, which had seemed to eliminate all petty jealousies which might have existed and had elevated the plant growing end of the florists' business. He referred to the effort now being made by the New York Florists' Club to establish a plant market, and asserted that he would be ready to send, regularly, a load of plants to such a market, win or lose. He did not see why New York could not have such a market. The London Covent Garden market had been a success for years, and a similar venture here ought to be successful.

Julius Roehrs, Jr. was then called upon as the representative of one of the greatest plant growing industries in the country, to tell what was being done in the direction of the Orchid business, "what the business was, what it is, and what in the future it may be."

Mr. Roehrs acknowledged his call in a few words, and said that the best way to answer the question would be for the members to visit the Roehrs' establishment, where, he said, they would be heartily welcomed.

A. L. Miller being called upon to say something for the N. Y. Florists' Club, said that his experience as president of the Club was quite short, but a year from now he would be glad to tell what he had learned. He said that a committee of the Club was hard at work on

the plant market problem, and he hoped that very shortly a report would be forthcoming.

F. R. Pierson spoke of the good the different trade bodies were doing for horticulture. He believed that such social affairs as the present one added not only to the pleasures but to the profits of the business. In his opinion the threshold had only been reached as far as the possibilities of New York trade were concerned. It was within his memory, he said, that 25 years ago a friend had said to him: "Do not go into the flower business, it is overdue." If that gentleman were living today he would be surprised. He thought that while today the business looked big, a quarter of a century from now those at present engaged in it would appear as pygmies.

He emphasized the necessity for a strong horticultural body in New York, and appealed to plant growers to interest themselves in its formation. While small associations were of value all should lend aid to form an organization which should be general in its character and interest the public.

H. C. Steinhoff displayed his ability as an after-dinner story teller; and John G. Esler told of the experiences of the Florists' Hail Association for the past 22 years, and of the good that Association was doing. Wm. Elliott told something of what he knew about plant selling; and Wm. J. Stewart threw a little light on the social side of Boston, a city in which all florists were now to become more than ordinarily interested. Mr. Drury of A. H. Hews & Co., Cambridge, Mass. expressed his pleasure at being at the banquet, as also did John G. Whildin of Philadelphia. Louis Dupuy suitably acknowledged the toastmaster's call on him as "one of our leading plantmen." J. H. Pepper said a few words in behalf of "The Press," and Louis Schmutz said some complimentary things in regard to the Association of Plant Growers. W. H. Siebrecht, who was introduced as "the man who grows more Tulips than all of us put together" gave his views on the advantages of the Association; and Alex. J. Guttman expressed himself on the same subject, taking a wholesaler's standpoint. W. H. Siebrecht, Jr. spoke nicely for the Association; and John Donaldson explained why he was late and how near he came to missing the good time all were experiencing at the banquet. J. Austin Shaw was the last speaker, and his toast was "The Ladies," a subject which evidently suited him.

ILEX FARGESI.—Several nice plants of this new Chinese Holly are to be found in the Coombe Wood Nursery of Messrs. Veitch, while seedlings of the same species have been raised at Kew within the past year. It is not, however, generally known as yet. Though it is not likely to attract so much attention as another new species, *I. Pernyi*, which has recently been put into commerce, it is sufficiently interesting to be sought after by lovers of rare shrubs, for it is quite distinct from any other cultivated Holly. Seeds were sent from western China by Mr. E. H. Wilson, but the species had been known for some time previously by herbarium specimens. Travellers inform us that it is met with as a good-sized shrub up to 15 feet in height in China; but from what can be imagined from the character of the plant as grown at Coombe Wood it will not attain that height here, or not for a very long time. The branches are rather long and thin, red in color, and clothed with evergreen leaves, which are each from three inches to four inches long, and one-quarter inch to one-third inch wide, with slightly serrated edges and a long, acuminate apex. The upper surface is dark green, the under surface paler. Dried specimens show small red fruits, borne in axillary clusters, but they do not strike one as being so showy as those of many other species. So far as hardiness is concerned, it appears to be able to withstand as much cold as the majority of shrubs, and was less damaged last Winter than such sorts as *Ilex dipyrrena* and *I. latifolia*, the leaves of which suffered rather badly in some districts.—*Gardening Illustrated*.

Visiting Carnationists at the establishment of the Pittsburgh Cut Flower Co., at Bakerstown, Pa., Jan. 28.

Complete Schedule of—Great Exhibition of

ORCHIDS
And Other Plants

To be held at Boston, Mass., May 26, 27, 28, 29 and 30, 1910,
under the auspices of the Massachusetts Horticultural Society

Intending exhibitors must file their entries with the secretary of the Society not later than April 1, 1910.

No. 1. For the best display of Orchid plants in bloom, arranged for effect, embracing at least 20 Orchid genera and bi-generic hybrids, and unlimited as to number of species, varieties and hybrids, to fill 400 square feet of space.

In the arrangement stove and greenhouse foliage plants may be used, and the general effect produced (with or without such plants) will be considered by the judges in making awards as per the following scale of points:

Variety of Orchids 30 points
Quality 35 points
Arrangement and Decorative Effect 25 points
Novelty of Orchids 10 points

Cut blooms of rare sorts not exceeding in number five per centum of the total number of varieties of Orchid plants in the exhibit will be admissible.

First Prize Gold Medal and \$1000
Second Prize .. Silver Medal and 500
Third Prize .. Bronze Medal and 250

No. 2. For the best display of Orchid plants in bloom, arranged for effect, embracing at least 10 Orchid genera and bi-generic hybrids, and unlimited as to number of species, varieties and hybrids, to fill 150 square feet of space.

In the arrangement stove and greenhouse foliage plants may be used, and the general effect produced (with or without such plants) will be considered by the judges in making awards as per following scale of points:

Variety of Orchids 30 points
Quality 35 points
Arrangement and Decorative Effect 25 points
Novelty of Orchids 10 points

Cut blooms of rare sorts not exceeding in number five per centum of the total number of varieties of Orchid plants in the exhibit will be admissible.

Commercial growers excluded from competition.

First Prize Gold Medal and \$200
Second Prize .. Silver Medal and 100
Third Prize .. Bronze Medal and 50

No. 3. For the best recently introduced Orchid plant not previously exhibited in the United States. Gold Medal

No. 4. For the best new seedling Orchid plant not previously exhibited in the United States. Gold Medal

No. 5. For the largest and best display of cut Orchid blooms arranged with ferns or other foliage. Variety and decorative effect will be considered.

First Prize Gold Medal and \$100
Second Prize .. Silver Medal and 50
Third Prize .. Bronze Medal and 25

No. 6. For the best collection of cut Orchids of new varieties not before exhibited in the United States. Ferns or other foliage may be used in the arrangement. First Prize, Gold Medal

No. 7. For the best group of flowering and foliage stove or greenhouse plants arranged for effect.

First Prize Gold Medal and \$100
Second Prize .. Silver Medal and 50

No. 8. For the best new species of stove or greenhouse plant in bloom not previously exhibited in the United States. Gold Medal

No. 9. For the best new species of stove or greenhouse foliage plant, exclusive of ferns, not previously exhibited in the United States. Gold Medal

No. 10. For the best new species of coniferous plant, not yet disseminated, likely to be hardy in Massachusetts. Gold Medal

No. 11. For the best new species of shrub or climber in bloom, likely to be hardy in Massachusetts, not previously exhibited in the United States. Gold Medal

No. 12. For the best new species of hardy herbaceous plant in bloom, likely to be hardy in Massachusetts, not previously exhibited in the United States. Gold Medal

No. 13. Group of botanical Orchids, not less than 25 plants and 15 genera.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 14. Six Orchid plants, distinct genera.

First Prize Silver Medal and \$50
Second Prize .. Bronze Medal and 25

No. 15. Three Orchid plants, distinct genera.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 16. Three Cattleyas, distinct species.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 17. Specimen Cattleya, any species.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 10

No. 18. Specimen Cymbidium.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 19. Three Cypripediums, distinct species.

First Prize Silver Medal and \$15
Second Prize .. Bronze Medal and 10

No. 20. Specimen Cypripedium.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 21. Specimen Dendrobium.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 22. Three Lælias, distinct species.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 23. Specimen Lælia, any species.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 24. Three Lælia-Cattleyas, or Brasso-Cattleyas, distinct.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 25. Six Miltonias.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 26. Specimen Miltonia.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 27. Six Odontoglossums, not less than three species.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 28. Specimen Odontoglossum.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 29. Specimen Oncidium.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 30. Specimen *Trides* or *Saccolabium*.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 31. Specimen *Sobralia*.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 32. Specimen *Vanda*.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 33. Three Orchids, bi-generic hybrids other than *Lælia-Cattleya* or *Brasso-Cattleya*.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 34. One Orchid, bi-generic hybrid other than *Lælia-Cattleya* or *Brasso-Cattleya*.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 35. Three Orchids, distinct genera not otherwise provided for in Schedule.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 36. Specimen Orchid, any genera not otherwise provided for in Schedule.

First Prize Silver Medal and \$25
Second Prize .. Bronze Medal and 15

No. 37. Best specimen Orchid plant in exhibition.

First Prize Gold Medal

Rules and Regulations governing this competition may be obtained on application to the secretary of the Society, Wm. P. Rich, 300 Mass. ave., Boston, Mass.

If It's Good for Him—It's Good for You TO WEST SIDE BACHELORS (And Married Men)

I expect this year to sell a box of flowers for St. Valentine's Day to every bachelor on the West Side. When the bachelors see what happened to a friend of mine

The Tournament of Roses at Pasadena, Cal., of which we present four illustrations herewith, was described in our issue of January 15, on page 89.

last year, as pictured on this card, they will line up four deep to get one of my Special \$2 Valentine boxes of flowers.

There is nothing else that seems to get quite so close to a woman's heart as a flower. I don't quite know why this is unless it be that a flower is absolutely natural; but I do know that almost every girl, from six to sixty, would rather have a bunch of Violets, or a box of flowers than a good dinner.

And so, on the day of St. Valentine, there is nothing more appropriate nor that will be more welcome to the "one woman," than a box of flowers, and nothing that will more certainly help the man who gives it to make a "hit." And, goodness knows, most men need something to help us when it comes to making a "hit."

Try the suggestion this year and see if the charm doesn't work in just the same way as it did with my friend last year. If it doesn't, at least you will know that the thing for you to do is to get busy somewhere else.

HUGHES—Florist.

Lincoln and Van Buren sts., Chicago.

P. S.—I recommend the plan to you married men as a good way to get on good terms with your wife.—H. R. H.

Above story goes with the cartoon and is "My Valentine to you and EXCHANGE readers."—H. R. H.

A Chariot Race Through the Clouds

is the title of Mr. Hughes' St. Valentine's Day window display. The mise en scene shows a side view in the store of a chariot 3 ft. high, suspended in midair, drawn by a flock of 20 doves, staged in the center window of store frontage. The reins are handled by the fairy queen who usually reigns in the sphere above the clouds. The electrical effects surrounding add to the general appearance and grandeur of the setting. It appeals to young and old.

Paris, a City of Flowers

It would be difficult to ascertain how much money is spent in the 12 months on flowers in Paris, but some idea of the colossal dimensions of the traffic may be gathered from the estimate formed by competent persons that every year the purchases of flowers made by the Paris market in the single department of the Alpes-Maritimes amount to nearly £3,250,000. A typical example of the orders received on occasions by Nice and ad-

joining towns is furnished by the sums spent in flowers for the funeral of President Carnot, in July, 1894. The consignments sent to the capital alone from the Riviera represented more than £60,000, while almost as much came from the provinces and abroad. So enormous was the demand for all kinds of flowers that the great flower market at the Halles was quite unable to cope with the business.

The florists, therefore, treated directly with the horticulturist in the environs of Paris and several times a day they visited the gardens and bought up, without discussing the price, whole flower beds of Rose trees, Marguerites, Pansies and Marigolds, and greenhouses of Orchids. The Czar of Russia ordered his ambassador in Paris, Baron de Mohrenheim, to send a wreath to the interment worth 8000f. (£320) and told him to get it from a florist in the Rue Royale. But the house in question was unable to execute the order, so it went to a firm in the Boulevard de la Madeleine, which supplied a magnificent wreath for £200. As at the funerals of Victor Hugo, Thiers and Gambetta, the number of wreaths at the interment of President Carnot was very considerable and many of them measured several yards in circumference.

The flowers sold in Paris may be divided into two main categories—"le Nice, le Midi," which reach the capital in large quantities every day by the trains of the P. L. M. Company, and "le Paris," or "le chauffe," so called, because they are the product of conservatories where their growth is forced by artificial methods, after which they are brought to the Halles by the gardeners from their establishments around the city, carefully wrapped up and protected from the cold. "Le tres beau Midi" goes to the grand florists, who pay top prices; "le Midi ordinaire" to the little florists and the humble flower sellers, who hawk their perfumed stock in trade around the streets. The "chauffe" cost more than the beautiful Roses and Violets of Nice, for the reason that the artificial sun to which they owe their birth is a very expensive affair, whereas the Riviera horticulturists get theirs for nothing.

A Paris florist sometimes charges 3f. or 4f. for a Rose in Winter. But perhaps it has cost him 2f.; he has ordered five or six dozen Roses from the south of France, but when they arrive a dozen are "perdues" and unsalable, and the loss has to be made up on the others. The bouquets and corbeilles which figure on the tables

"Choicest of Flowers Always on Hand."

of the wealthy frequently cost 100f. (£4), but they contain perhaps two or three dozen Orchids, for which the flower dealer has paid a good price.

Besides, the corbeille is a veritable work of art, a picture, and is the achievement of a special employe known among florists as a "coloriste," whose occupation is to arrange the flowers so that they shall look their best and speak their most seductive language. The "coloriste" is generally a woman. Her first duty in the morning is to dress the window, so utilizing the grace and harmony of her floral treasures that the passerby will be charmed, so fascinated that after a moment's hesitation he or she, yielding to the irresistible lure of the "coloriste," will enter the shop and buy the flowers. The art of the "coloriste" is of course assisted by such accessories as vases, baskets and paniers, supports and ribbons, and in the use of these she also shows a pretty taste. The commerce of flowers in this country numbers in its ranks some real geniuses and in Paris they find a theater worthy of their talents.—Paris correspondence London Globe.

We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessel, if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild

or cultivated, location where growing, it would often enable identification of specimens difficult to determine otherwise.

(33) **Grinder Wanted to Pulverize Broken Pots.**—Is there anything in the market like a broken pot grinder where broken flower pots could be ground as fine as flour?—J. H. F., N. J.

—There are several makes of crushers on the market which are used to pulverize bone, etc. Perhaps one of these would answer your purpose. Write to some of the seed houses advertising in these columns for fuller information.

(34) **Rhododendrons for Easter.**—Please let me know when to put in my Rhododendrons and what temperature to keep them at to have them the week before Easter.—N. W., New York.

—Put Rhododendron plants in a greenhouse where 60° to 65° at night can be maintained. Plants should be in warm house now. Keep buds syringed with water.

(35) **Sweet Peas in Pots.**—What is the proper time to sow Sweet Peas in pots in order to have them started and large enough to plant outside, say first week in April, or when the ground is 15° in Jersey? What is the best temperature to bring them along inside?—J. M., J. C.

—Sow Sweet Pea seed about March 1. Temperature necessary, 45° to 50° at night. Be sure to harden plants in a cool house or cold frame before planting outdoors in early Spring.

(36) **Trumpet Major Bulbs not Flowering.**—Some time ago I purchased Trumpet Major bulbs (Dutch grown). They were well rooted in the boxes underground when I brought them in. I put them under benches in a Carnation house, until they were about 8" high, then placed them in another house at the same temperature. They now average a foot high, but only about 20 per cent. are in flower. The balance show nothing but long grass. And if you split one of the bulbs open there is no sign of a bud to be seen. Can you tell me what is the probable cause of so many of these bulbs being blind?—H. S. M., N. J.

—Unless strong first-class bulbs of Trumpet major are secured for early forcing, results are seldom satisfactory, for small bulbs seldom give good flowers when forced too early, or many come blind for that reason. As the season advances, you will find that a greater percentage of bulbs will give flowers. Growers usually figure on a loss when forcing Daffodils early in the season, to guard against which special orders are placed for bulbs to produce early flowers.

(37) **Carnation Cuttings Kept too Dry.**—Can you tell what causes Carnations to dry up and turn color of sample after being in sand about ten days? The enclosed samples have been in sand for 21 days. We have had a dry Summer and about twelve weeks of cloudy weather.—J. S., N. Y.

—Your Carnation cuttings have simply suffered from too little moisture in the sand. Perhaps the sand is too coarse, allowing the water to drain through too rapidly. Keep draughts and direct rays of the sun from striking cuttings until such time as root action is noticeable. The dry Summer has nothing to do with rootings cuttings at this time of year.

(38) **Propagating Aucuba Japonica from Cuttings.**—Please advise me of the correct name of the plant from which I send leaves herewith. Can it be propagated successfully from cuttings taken now from plants in the greenhouse in fine condition, and what treatment should the cuttings receive?—O. B. H., Conn.

—Name of specimen, Aucuba Japonica Variegata. Cuttings may be taken from half-ripened wood, but these seldom make good plants under two or three years. Place cuttings in sand and give treatment such as would be necessary for Carnation cuttings; when rooted, pot them up, and in Spring plant out. Plants of Aucuba can be imported in any size and at reasonable rates from growers in Belgium and Holland, in which countries they develop more rapidly and show better variations in the leaves.

(39) **Sowing Seed of Biennials.**—Will you tell me if seeds sown now of biennials, such as Hollyhocks, Campanula, Sweet William and Foxglove, would make flowering plants this year?—O. H. B., Conn.

—Seeds of biennials, sown now, seldom bloom the first year, but would make good growth for next season's flowers, although some of varieties give a small amount of flowers if sown in early Spring, and planted out when weather becomes favorable.

(40) **Canna Seed Sown Now.**—What success would I meet with Canna seed sown now?—O. H. B., Conn.

—Canna seeds sown now will make considerable growth the first season, and if second states greatly enough to transplant an early start. Flowers will appear in the Fall; the bulbs of these seedlings should be carefully dug and preserved until the next Spring, at which time they can be planted out and better results will be obtained. It is customary to soak the seed in water until soft, after which sow the seed in flats or pots, and place where good bottom heat can be obtained, keeping them moist until growth starts.

FOR SALE

FLORISTS' ICE BOX 8 ft. x 3 ft., two upper doors, two lower doors, beveled French mirrors, two lower doors, double thick glass, second-hand but in good condition, \$36.00.

You Need This Paper if You Force Vegetables

The Weekly MARKET GROWERS JOURNAL is the ONLY paper published exclusively for market gardeners and truck farmers. It carries a special department devoted to the greenhouse forcing of vegetables and is the official organ of the Greenhouse Vegetable Growers' and Market Gardeners' Association of America. Recognized by Department of Agriculture and Experiment Station officials as authority on vegetable forcing.

What Eugene Davis Says
Eugene Davis of Grand Rapids, Mich., originator of Grand Rapids Lettuce and Davis' Perfect Cucumber, writes:

"The articles on Growing Lettuce by Mr. Wald and Growing Cucumbers by 'Grower' are worth ten years' subscription to a beginner."

Florists' Club of Washington, D. C.

The Club met at Eagle Hall on the night of February 1. A short business session was held, as the chief feature of the evening was the entertainment to follow and in which the ladies partici-
pated. This being the occasion for the nomination of officers for the en-
suing year, the attendance was larger than usual. J. J. Harty, proprietor of the Flower Depot on 14th st., was ad-
mitted to membership. Under the re-
cent amendment to the rules the vote is by ballot and governed by a two-
thirds majority, proposals being made a month previous to the admission of the new member.

Nomination of officers resulted as fol-
lows: For president, Geo. H. Cooke, John Robertson, E. C. Mayberry and F. H. Kramer; for vice-president, E. C. Mayberry; for secretary, W. A. Bollinger, Jas. L. Carbery and the present incumbent, O. A. C. Oehlmer; for treas-
urer, Wm. F. Gude; for two directors to serve three years, Geo. Super, W. W. Kimmel, O. A. C. Oehlmer and Jas. L. Carbery. The nominations for directors are to fill vacancies made by the expired terms of Geo. H. Cooke and W. S. Clarke. Additional nominations were David Bisset, David Grillbortzer and C. A. Shaffer. There was lively inter-
est in the nominations, and the next meeting night—first Tuesday in March—promises to be made enthusiastic through the interest of friends of the various nominees.

The business meeting adjourned at 9 p.m., when all made way to the large dance hall which had been decorated with Evergreens, Immortelle wreaths and bells. The array of talent, though not all from the professional field, was good, and as follows: Miss Wolf, solo and fancy dance; Prof. Victor, mono-
logues and song, darkey sketch, Prof. Charlemagne Koehler, was at his best in a Seven Ages imitation of Italian opera, etc.; his reappearance in Wash-
ington filled his hosts of friends with enthusiasm. Prof. Pistoria's orchestra supplied music for the dancing and merry hearts kept time. A fine array of professional talent filled in the latter hours of the night.

JAS. L. CARBERY.

San Francisco

Business has been more than brisk since the New Year, many social func-
tions using up quantities of flowers. Everything is scarce and, naturally, prices are high. The demand has been in ex-
cess of the supply, so all the growers wear "the smile that don't come off." Violets are twice the price they were this time last year. Narcissus, both Trumpet and Paperwhite, are commencing to ap-
pear, while a few Chrysanthemums may be seen in a few of the stores. Adiantum, Asparagus and Smilax are also very scarce, most of the supply being ex-
hausted during the holidays.

E. W. McLellan of Burlingame is thor-
oughly installed at his new quarters, Lick Place. He has been sending in fine Kil-
larny, My Maryland and American Beauty Roses, all of which are disposed of as soon as they are received. He is also cutting immense quantities of Lilies, which have a ready sale.

The first banquet of the Pacific Coast Horticultural Society was held at the Palace Hotel on Saturday evening, Jan-
uary 22, and about sixty of the craft enjoyed the bounteous feast. V. Matraia, president-elect of the Society, was toast-
master. A very enjoyable evening was spent. President Plath in his address was boasting the S. A. F. and said he hoped that many would join this Society, as it had done so much for the florists in the way of reducing express rates, etc. He has been appointed vice-president of the S. A. F. for the State of California.

Pelicano and Rossi report business as far ahead of last year, and the only com-
plaint they had was as to the scarcity of stock.

MacRorie-McLaren Company have re-
ceived, lately, four thousand Phalaenop-
sis grandiflora. They were all mounted on wood and arrived in fine condition. They have also received a large shipment of Tree Ferns from Australia, which found a ready sale. Four hundred trunks of the variety Cyathea medullaris are to be planted in a canyon in Golden Gate Park. This variety does remarkably well here, making grand plants with many plume-like fronds, from 12 ft. to 20 ft. long in two years from the time the stems are planted. This is the largest shipment by far that has ever been brought to this country.

E. A. Asmus, T. Patch and F. Nielson have joined the planting forces of the MacRorie-McLaren Company. They formerly worked with Mr. MacRorie at Short Hills, N. J.

J. Cairns, representing H. A. Dreer of Philadelphia, was a recent visitor.

"FLORISTS' FAVORITE" CUT FLOWER BOXES

ciety. Secretary, William P. Rich.

Retail Notes

WESTBROOK, ME.—Nathaniel W. Han-
ford is to discontinue his florist store
here, and will locate in Portland.

BROCKTON, MASS.—Patrick J. Boyle,
florist, has filed a petition in bankruptcy,
with liabilities \$3221, and assets \$450.

BEVERLEY, MASS.—James Whittier,
dealer in plants, is in bankruptcy; liabil-
ities \$9206.

NEWTON CENTER, MASS.—Mr. Orcutt
has purchased the greenhouses of Frank
Brooks, and will continue the business.

HIGHLAND MILLS, N. Y.—George Mer-
ritt, florist, and Mrs. Merritt celebrated
the twenty-fifth anniversary of their mar-
riage on Jan. 25.

DEKALB, ILL.—Carlson Brothers are
opening a new flower store in this city.
Temporary quarters have been taken in
Brown's drug store.

PITTSFIELD, MASS.—Robert L. Smith
and Stanley G. Barnes of Schenectady
have opened a florist store in the Agri-
cultural Bank Building. Mr. Smith was
formerly with Wallace & Co., and Mr.
Barnes with Charles Limmer, Schenec-
tady florists.

Detroit

Everybody was hustling for funeral
flowers last week and a good sprinkling
of society work helped the last week of
the first month to be ahead of the same
month a year ago.

Supply in all lines is good and is used
up very freely, but there exists a serious
shortage in Roses, which has brought
their price away up. Spring flowers are
coming in freely and are well appreciated
by the customers. A liberal supply of
very good Violets has lowered their prices
somewhat, and they sell now at \$2 per
100.

Local growers are beginning to prepare
stock for the coming Fall show. The
prize list is ready; it covers the entire
field and disposes of some \$800 in prizes.
Preliminary discussion in regard to ar-
rangements has developed very interest-
ing features which are bound to give this
exhibition a very artistic stamp.

FRANK DANZER.

*THE third edition of our Design Book is now ready to be mailed out to purchasers.
It has been thoroughly revised and greatly improved and is easily worth Ten
Dollars a copy to any one with a Retail Trade. Sixteen pages have been added, older
designs eliminated and many new and beautiful suggestions incorporated.*

The Florists' Exchange Design Book

covers, with 32 blank leaves for pasting in clippings of
other designs, at One Dollar additional to above prices.

All prices include delivery prepaid.

The Florists' Exchange, P. O. Box 1697, New York City

CARNATION DOROTHY GORDON

You cannot afford, if you grow Carnations and are looking for larger profits on your present capital, not to investigate Dorothy Gordon carefully before you complete your season's arrangements—for Dorothy Gordon has the other commercial Carnations excelled at every point, and it's simply a matter of justice to yourself to give it at least a fair trial this year!

We have asked our friends to visit our plant and see it growing, and a great many have done so. Have YOU? If not, we urge you to come now, for you will certainly be convinced, as others have been, after seeing it in our houses.

CARNATION DOROTHY GORDON possesses all the points that you, a progressive grower, desire in the flowers you supply you trade. Large

JOSEPH HEACOCK COMPANY, -

size (3 inches or more in diameter), fine, uniform color (a shade darker than Pink Enchantress), long, stiff stems, strong constitution and excellent keeping qualities, profusion of bloom—all these are big, important qualities in favor of our new Carnations—and best of all is the fact that its buds command a price 50 per cent. higher than those of the ordinary commercial sorts.

If you want any Dorothy Gordon this year, though, you'll need to get in your reservation at once, as our stock of rooted cuttings is being taken rapidly. Orders will be filled in strict rotation at these popular prices: **\$10.00 per 100, \$75.00 per 1000.**

Give us a chance to show what Dorothy Gordon will do. Come to Wyncote if you can; if not, write for further particulars—we'll gladly answer questions.

- Disseminators, - WYNCOTE, PA.

A New Carnation Seedling of Wonderful Merit will be offered to the Florists' Trade in February, 1910. Orders booked now. This Carnation,

"The Constant"

Grown by Wm. Bester, of Hagerstown, Md. Color between Rose Pink and Winsor. Produces long stems and large blooms from October to June. Free of any disease and no cropper. Calyx perfect. Blooms keep in good condition ten days. This Carnation grown and tested by Mr. Bester for three years and all points guaranteed. The original seedling produced under the most scientific cultural conditions and will out-perse the Lawson.

Price for Strong Cuttings only \$10 per 100. Before buying other varieties Florists should send for samples of this Carnation, as they will compare favorably on all points with any other Carnation on the market. Blooms mailed free on request.

QUIDNICK GREENHOUSES

J. H. Cushing, Prop.. Quidnick, Anthony P. O. R. I.

OWING to the scarcity of Carnation Cuttings this season

there is good opportunity for those who are so situated as to be able to propagate them, especially the standard varieties, in time for this Spring's sales. Those growers having surpluses of recognized commercial varieties are advised they can make sales readily through an advertisement in these columns.

WINSOR

We have about 16,000 Winsor cuttings that will be ready between Feb. 1 and 20. As we need the room we will offer this stock, until sold, at \$1.50 per 100, \$12.50 per 1000. Cash with order. This stock is guaranteed to be strictly first-class in every respect. If, upon arrival, stock is not satisfactory, same may be returned to us at once and money will be refunded.

WHITE BROTHERS

GASPORT, N. Y.

Please mention the Exchange when writing.

Rochester, N. Y.

Owing to graduating exercises being held on Friday, and McKinley Day coming on the day after, the demand for Roses and Carnations was very active; by six o'clock Saturday evening Carnations were almost an unknown quantity. Whether McKinley Day entered very largely into creating a demand of any proportion is a question which, when broached on the subject, the dealers seemed very dubious of as to its popularity. However, it must be said that it helped out to a great extent in ridding the market of the plethora of colored Carnations that have been in evidence for some time, and which from the present outlook, will again accumulate

if something does not turn up to carry them off. White and Enchantress sell readily if of good quality; much of the white coming in is, however, of such poor quality as to be almost worthless even for design work.

Violets are selling much better, due to the fact of warmer weather. Valley and Harrisii Lilies are not moving as readily as could be desired.

Mr. W. Vick has returned from the convention of the American Carnation Society and reports a fine exhibition; he was much impressed with many of the new varieties he saw.

Professor Judson of Cornell was a visitor recently; as professor of horticulture he is working assiduously for a grant from the State that will enable him to do some experimenting on a scale that will be of value to the commercial florist. He states that at present their experimental work is so limited as to be of practically no value to a commercial man.

Chairman A. F. Vick of the Bowling Committee has his committee well in hand. Bowling will commence Thursday evening at the Grand Central; it is expected that at least 20 will attend. The alleys are the best in the city and it is earnestly desired that the boys will take hold and stick to it. H. B. STRINGER.

Pittsburgh

The last few days the florist trade has been rather quiet, still stock of cut flowers was not overabundant. Good Roses have been rather scarce; American Beauty are way up in price and hard to get. Carnations seem to be coming in more freely with prices unchanged. Bulb stock is abundant and varied. Callas predominate. Harrisii Lilies bring a stiff price. Plants are coming in more freely; the weather is yet rather severe for handling them safely.

Last week the boys were all busy with the American Carnation Society's convention and business was laid aside; now they are all back in harness again and much pleased with the result of their labors, for nothing was left undone to make the stay of the visitors as pleasant as possible. A few of the visitors were still in the city Saturday; the most of them left Friday evening after returning from their visit to the Pittsburgh Cut Flower place at Bakerstown. About 100 people took in the trip; two special cars had been provided to take them to Bakerstown, and from the station to the greenhouses sleighs were used. After luncheon a trip through the greenhouses gave the visitors an idea of the extent of the place.

As to the Carnation exhibit, the general verdict seems to be that it was the most successful show ever held. As regards the quality of the blooms it was, no doubt, as good if not better than ever before. There may have been more flowers exhibited heretofore and we rather expected a larger display. As to the awarding of prizes, etc., there were no complaints heard. The room in which the exhibition was held was perhaps one of the best ever had and the flowers kept remarkably well.

The weather was rather more favorable than the Society had had for its convention the past few years; even if it had not been so it would not have interfered with any of the doings as everything in connection with the meeting was taken care of under one roof; a good plan if it can be carried out in the future.

Our florists are certainly more than pleased that everything went off so nicely and we all hope that the visitors will remember their stay of a few days in dirty Pittsburgh (for it was certainly dirty at the time) and will want to visit us again. E. C. REINEMAN.

The Lawson Gold Medal.....Washington, 1908
Silver Medal of the Society of American Florists.....Washington, 1908

MRS. C. W. WARD

MRS. C. W. WARD is a perfectly formed flower with full center; color deep pink, several shades lighter than Lawson, deeper than Winsor; having strong, erect stems, 24" to 36" in length. A vigorous, healthy grower, and has never shown disease of any kind.

A very early and free bloomer, producing fine flowers as early as September 1, which bring from twenty-five to fifty per cent. more than any other variety on the market.

Rooted Cuttings, \$2.00 per 12, \$12.00 per 100, \$100.00 per 1000.
25 at the 100 rate, 250 at the 1000 rate

Delivery February 20th

ALMA WARD

This beautiful Carnation is pure white, except during dark weather, when it shows delicate splashes of pink similar to the Cattleya, increasing its popularity.

ALMA WARD is the largest, most fragrant Carnation ever grown, producing perfect flowers 3½" to 4½" in diameter, on strong, erect stems, 36" to 42" in length.

Rooted Cuttings, \$3.00 per 12, \$5.00 per 25, \$9.00 per 50, \$15.00 per 100, \$35.00 per 250, \$65.00 per 500, \$120.00 per 1000.

Delivery March 1st

INVITATION We extend a cordial invitation to all those interested to visit our establishment, where they will have an opportunity to see these varieties growing and to compare their good points with other standard varieties grown under the same conditions.

The Cultivation of Cyclamen

Mr. James Stuart, of Mamaroneck, N. Y., recently gave an interesting account before the Tarrytown Horticultural Society of N. Y., as to his methods of treating Cyclamens, of which he is a successful grower. The following is a summary of his remarks.

Mr. Stuart said that the best time for sowing was the middle of August, and strongly advised the procuring of new seed as his experience was that these germinate much quicker and more strongly than old seed. As sowing compost he uses a mixture of loam, leaf-mould and sand, with enough finely broken charcoal to insure openness and freedom of drainage. Flats are used in preference to pans, and the seeds sown in shallow drills in place of broadcast, so that the surface of the soil can be worked over occasionally to prevent moss or scum from gathering. The seeds are covered only lightly with soil and the boxes closely covered with glass to prevent evaporation. A temperature of sixty degrees is maintained with plenty of atmospheric moisture. When the seedlings are up plenty of light is allowed, but shade is always provided against strong sunshine. When the second or third leaf appears, the seedlings are pricked over into flats again, in preference to pots, where they remain until large enough to be potted into 3" or 3½" pots.

For Christmas flowering they are moved up, when ready, into 5" or 6" pots, but when intended for Spring flowering they are given another shift, 7" pots being used. In Summer they are kept in the coolest possible house and, when Fall comes, a temperature of not less than 55° is maintained until such time as the flowers begin to show. Then the temperature is lowered to from 45° to 50° at night and, when in full flower, air is freely given, a little being allowed at night to insure a dry atmosphere and prevent damping.

In the general potting compost, a liberal supply of well-rooted manure is added to that formerly advised and potting done moderately firm. Cleanliness, both in the house and benches, he strongly advises. Also every precaution to prevent insect enemies from getting a hold on the plants. A solution of soft soap and kerosene he considers the best insecticide, this being used freely as a spray both on the plants and benches as a preventive against the Cyclamen mite.

In growing plants over the second year he preferred to keep them growing along steadily in place of drying off as some do, and retaining as much of the old foliage as possible, but keeping all decayed flowers and leaves closely picked off.

In conclusion Mr. Stuart said that to be a successful Cyclamen grower one had to have a special interest in the plants, to pay strict attention to details, and be on the job all the time.

Rose Growing at Hadley, Mass.

The Montgomery Co., wholesale Rose growers, is advancing the work on its plant in Hadley through all the various kinds of adverse conditions of the Winter season in order that the actual work of growing may be taken up as early as possible. The Hadley property of the Montgomery Co. comprises 50 acres of land in the eastern part of the town. The greenhouses are to be of the newest type of steel frame construction, furnished and erected by the King Construction Co., and cover about one acre of ground. The heating plant will consist of two horizontal return tubular boilers, 72 inches in diameter and 19 ft. 6 in. long, built to conform to the Massachusetts laws, and will have a steel stack 48 in. in diameter and 86 ft. high. The heating plant will be connected with a system comprising five miles of pipe, ranging in size from ¾ in. to 6 in. There are to be in the roofs, 1300 boxes of double strength window glass, each box weighing 100 pounds.

Alexander Montgomery, president of the company, is a pioneer in the industry. He has made a life study of Rose culture in all its forms and is widely known as a skillful cultivator and an authority in all that pertains to the successful management of Rose growing. He has built up the well-known Waban Rose Conservatories at Natick from a small beginning until today they are among the largest the best equipped in the country. In everything that has to do with the science of Rose culture he is a recognized leader. Robert J. Montgomery, secretary and treasurer of the company, was trained in the Massachusetts Institute of Technology for the profession of chemistry and has had extended experience. A. W. Montgomery, general man-

ager, is a graduate of the Mass. Agri. College and has devoted much time to study of Rose growing and observation of methods in various parts of the country.

Stocks as Pot Plants

Just at this time of the year, when there is not a very great variety available in flowering plants in pots, anything in that line, even though in itself perhaps common, when uncommonly well grown is worthy of note.

I have seen Stocks often grown in benches and in pots of various sizes, but the finest I have seen in many a long day were grown in pots in the greenhouses of Richard Mortimer at Tuxedo Park, where Carl Schaeffer is in charge. There were two large batches of single and double in full flower, and such stems! Almost covered from top to bottom with bloom. For the most part they are flowered in 4-in. pots, although there are a number of more finished specimens in 6-in. pots.

Mr. Schaeffer sows the seed of Stocks in June and puts them into small pots as soon as they are large enough to handle; these, when established in the soil, he places in the coolest spot he can find outdoors, and repots only when they show they are actually in need of more root room. The plants are not taken indoors until conditions outside make it risky to let them remain there any longer.

Stocks are by no means the only things done well here. One house of Carnations is certainly worth looking at; there are not many varieties grown and it seems worthy of comment that here, where Carnations are grown to such perfection, only such varieties as the several Enchantress varieties, Lawson and Victory, find much favor. Victory, in Mr. Schaeffer's opinion, is emphatically the best all-round red Carnation grown and he says he has tried others.

In another house were two large batches of Freesias, grown in 6-in. pots; one of Purity and the other of the older and commoner variety. It took but a glance to see that Purity leads in every point by which Freesias are judged.

Mr. Schaeffer is one of, if not the largest grower of Chrysanthemums in this section; he is now hard at work propagating, while his son Richard, who is noted for his success in growing specimen Chrysanthemum plants, is already well under way with his foundation for what he hopes will be prize winners next season when he expects to again exhibit.

D. M.

Los Angeles

The stockholders of The Pacific Garden Publishing Co., which means the members of the Pasadena Gardeners' Association, held their annual election for a Board of Directors for the coming year on Jan. 20, with the result that three members who served last year—Otto Hentschy, James McGillivray and Wm. Niel Campbell—were re-elected; the new members of the Board are Roderick McKenzie, O. W. Howard and Edward Popp.

Ant. C. Zvolanek of Bound Brook, N. J., passed through this place on his way East from Santa Barbara, where he has been the last four weeks planting his famous Sweet Peas of the early flowering types. He put in 65 acres, 16 of which are designed for exhibition purposes. How the entire acreage can be anything else is difficult to understand. The man or woman must be callous, indeed, who does not go into raptures over our Sweet Pea fields when in bloom. Mr. Zvolanek has made arrangements with our enterprising seedsman, Wm. Neil Campbell, to act as his general agent for California, Arizona, Nevada, New Mexico and Mexico. The thought occurs to me, Have these two men even a faint idea of the extent of territory here named?

Arthur Simpson, foreman for Howard & Smith at their Montebello Nursery, brought in to the last meeting of the Pasadena G. A., Jan. 21, an armful of their perennial Delphiniums, from the open, which were three feet tall with heads of flowers a foot long and in every conceivable shade of blue. This progressive firm is composed of young fellows with an inherent love for flowers, and, bubbling over with enthusiasm; they have produced a strain of Delphiniums, of Gladioli, and of Shasta and Transvaal Daisies, superior to anything in their line that has yet come under my observation. Another remarkable characteristic of the firm is, that it is a wonderful financial success, a combination not often met with—business ability and a love for plants.

P. D. B.

MARY TOLMAN

Winner of First Prize at Milwaukee. Deep flesh pink, the most beautiful color of any in this class. Does not fade in the strongest light. An excellent, clean, upright grower, long, stiff stems and perfectly formed flowers. Will produce more perfect blooms in a season than Enchantress. We want your order for this excellent Carnation. Orders booked now for February, 1910, delivery. **\$12.00 per 100, \$100.00 per 1000.**

A REVIEW OF THE MARKET

Violets
Chrysanthemums
Orchids
Lilies

NEW YORK, February 2.—The cut flower market has seen quite a little activity the past week, and prices have been somewhat more steady. But with increased sales, material of all kinds has been received in greater quantities, so that plenty of all grades of flowers have been obtainable.

American Beauty Roses have held their own and at this date they are practically cleaned up. Prices have remained about as last week, with an average of 50c. for top grades. Tea Roses of all kinds are very plentiful and stock is of the best possible quality. Prices range from \$4 to \$12, with a trade heavier call for the medium grades. Quite a few small grade Roses are selling at \$3. White sorts are more in demand than other colors, but the supply is ample.

Carnations have increased in quantity quite perceptibly, and quality is also par excellence. Sales are made at \$5 per 100, for top grades of Eucharist and White Perfection. Other grades vary from \$2 to \$4, according to quality. Plenty of flowers are on hand, but sales are such that the stock is kept moving.

Cattleyas and Cyripediums are not improving very rapidly, and prices remain about the same as last week, for small lots, while, generally, the average through the week will be about 40c. Cyripediums move very slowly and are hard to move at 8c. to 10c. each. Gardenias are more plentiful and prices vary according to quality of flower and length of stem; sales are often made at \$4 to \$5 per 100 for smaller grades, to clean up.

Lilies are becoming harder to dispose of, and offerings to buyers at 10c. per flower are refused. Plenty of all grades are obtainable, and much stock is left over from day to day. Lily of the Valley has stiffened a trifle, and the outlook for the coming week is that it may advance a little, but conditions are so variable that to prophesy is perhaps futile. At present, the price ranges from \$2 to \$4 and receipts have cleaned up well. Callas are still in fair demand and reach \$2 per doz. for top grade flowers. Many Callas are being shipped in which show disease spots, which turn brown after a day or so, thus spoiling sale of flowers.

Daffodils have become so abundant that efforts to hold the price at \$4 have been without avail, and should heavier shipments continue to arrive the prospect is that the price will fall. Tulips of all kinds are plentiful, and considering the quantity shipped in they move very well. Prices range from \$2 to \$4, according to stem and variety.

Violets continue to arrive in large quantities and top grades realize only 60c. for small sales. Street men benefit by the apparent slump, and to these, sales are made to clean up flowers from one to two days old at 20c. to 30c. per 100. Freesias are in fair demand. Adiantum is in good demand. Asparagus and Smilax move rather slowly, and vary in price according to grade.

PHILADELPHIA, February 1.—But very little change, since last week, is noticeable in the condition of the cut flower market, and business has been exceptionally good. American Beauty Roses are meeting with a good demand and are somewhat short in supply; top grades are worth 75c. Tea Roses of every variety move well, especially the medium grades, for which there is a strong call, and prices obtained are good.

Carnations move freely, although the increased receipts have a tendency to keep prices down. Top grade Eucharist and White Perfection realize \$5, but the bulk of sales is made at \$3 per 100. The demand for these flowers was good the latter part of last week, although on account of bad weather, the stock did not clean out as well as was expected.

Orchids are good property, and top grade Cattleyas realize 60c. Quite a few crippled blooms, however, are coming in, on which it is hard to realize anything.

Cyripediums move slowly, and average 10c. each.

Other flowers, such as Sweet Peas, Daffodils, Tulips both white and yellow, can be had in unlimited quantity, while Easter Lilies and Lily of the Valley are selling for prices much below the average.

Greenery of all kinds is in good demand, especially Asparagus and Adiantum, prices for which remain firm. Lilac is enjoying unprecedented popularity and more of the best quality flowers could be used. Prices range from 75c. to \$1 per bunch. Narcissus still remains plentiful, and is hard to dispose of; the same condition applying to Roman Hyacinths.

CHICAGO, February 1.—The condition of the market is practically a repetition of the past three weeks. The shortage of stock is discouraging to both the wholesaler and retailer. Roses are off crop and nothing can be expected from them for two or three weeks, until the new crops arrive. Such flowers as are to be had are on par with last week, although higher prices than are quoted are being obtained in many instances.

Carnations still arrive of excellent quality, although the quantity is sparse. The prices remain about the same and all good stock is moving rapidly at 4c.

Tulips are coming in nicely, and are of fine quality; Red varieties are just making an appearance. Yellow Narcissus of the Polyanthus variety has arrived, and meets with a very ready sale. Paperwhites are not seen in such quantities as in the week previous. Jonquils are scarce, the early crop not maturing up to expectations, and all are disposed of easily at 5c. and 6c. each. Some extra fine Roman Hyacinths are to be had, in fact, superior to any seen before this season. Freesias, likewise, are coming on fine, and are used extensively for funeral work. Perhaps the one item that has advanced in quantity is Lilies; they have been coming in the past few days more plentifully and the price has dropped a little. Lily of the Valley is in just as active demand as ever, and prices remain steady at \$3 to \$5 per 100. Orchids are seen in more profuse quantity, and the prices vary, as the stock is larger some days than others. Gardenias remain steady and are meeting with a good demand. Sweet Peas are not coming in any greater supply than in the past; more could be used if they could be obtained. Violets are not moving off as is usual; the price is 50c. to 75c. per 100, occasionally \$1 being obtained.

Smilax is arriving in full long strings, and hard, making it very easy to ship; \$15 per 100 is obtained for same. All green stock is not over abundant but plenty to meet all requirements. With the exception of a showing of Mignonette, White Lilac and a few Daisies, there is nothing more available.

INDIANAPOLIS, January 31.—Indianapolis was no exception in that desirable grades of flowers have been most difficult to obtain. All lines of trade were kept busy throughout the week and it often was a difficult problem to obtain good flowers. Shipments received in response to long distance and telegraphic calls invariably proved disappointing. Warmer, brighter weather will doubtless enact a change.

Carnations proved a mainstay last week and at least five times as many of them as Roses were consumed. Prices remained at \$2.50 to \$4 per 100. Counter trade is well satisfied, generally speaking, if enabled to obtain a sufficient quantity of Spring flowers, such as Jonquils, Paperwhite Narcissus, Tulips, Freesias and Lilacs. These have all brought quoted market figures and are good property for the grower. Callas and Harrisii Lilies have served the liberal amount of funeral work unusually well at \$12.50 to \$15 per 100.

The retail figure for them is \$3 to \$4 per dozen. Potted plants, because of the indifferent character of cut flowers, have been meeting with marked success. Prices vary but little each year, but at this period seemingly there is an upward tendency. Azaleas, Rhododendrons, Lilacs and potted pans of bulbous stock make attractive window displays.

The best grades of Roses have been wholesaling as high as \$12 per 100. Seconds, more ordinarily classed as thirds, sold at \$6 to \$8 per 100, and shorts at \$2 to \$3 per 100. A large percentage of the Am. Beauty are bull heads. Prices remain at \$5 to \$50 per 100 wholesale; and \$2 to \$12 per dozen retail.

Some nice Mignonette, also Forget-me-not is well received by the shop men. The Orchid business is slightly depressed and suffers because of an indifferent supply, \$50 per 100 is obtained for good Cattleyas. Sweet Peas are seen everywhere in several colors, at 50c. to \$1 per 100. The green goods market is well supplied at the quotations of larger cities.

BOSTON, January 29.—Prices are holding up well and, in fact, if anything they are slightly better than last week. For the past week we have been enjoying Spring weather and bulbous material is getting quite plentiful, such as Tulips, Narcissus and Hyacinths. Callas are more abundant. Sweet Peas are much more abundant than a week ago. White Carnations are very scarce and, in fact, most varieties are. Asparagus, Sprenger and plumosus are quite scarce. Adiantum very scarce. Roses not over plentiful but quality is good. American Beauty not abundant.

Orchids such as Cattleyas, Cyripedium and Dendrobiums, are in quite good demand and the supply is plentiful.

ST. LOUIS, January 31.—Last week business was very good and, according to the way the retailers bought stock, they must have put in a busy week. The commission men report clean-up sales on everything good last week. The retailers say they expect to be quite busy up to Lent, when the social season ends for six weeks.

Funeral work has been quite plentiful of late with all the store men.

The market has very few Roses and the commission men are asking a pretty stiff price for those coming in. In stocks arriving now, all varieties in Roses are

scarce, and from 10c. to 15c. is asked for the best. American Beauty, sell at \$5 to \$6 per doz. for choice. Carnations are bringing a good price and the market is well supplied with them. Saturday (McKinley Day) the commission men were asking top price, \$5 per 100 for good red and pink, the average price being about 4c. apiece. A few growers held back their stock for this day and its looks showed picking.

Violets, both single and double, are most plentiful at 25c. to 50c. per 100; the weather has been just right for them. Everything in the bulb stock line is plentiful, except Tulips and Freesia; these show no advance in price. Smilax and other greens have good sales.

ST. PATRICK.

Hartford, Conn.

Business continues good and flowers are very scarce. A large amount of funeral work has been done the past week and there has also been a good demand for flowers for social affairs. Prices are the same as previously reported. Blooming plants, such as Cinerarias, Azaleas and Primroses are selling well.

J. F. COOMBS.

Worcester, Mass.

There have been many deaths in this city during the past month; some of the funerals have been large with a proportionate display of flowers, and this, of course, means much to our florists.

Horticultural Hall is a busy place every Thursday. On Feb. 3, Prof. Donald B. McMillan, who was with Lieut. Peary in the North Pole expedition, gave an illustrated talk on the flora and natural history of the Arctic regions.

CAROLUS.

Changes in Business

READING, MASS.—The W. B. Jeffrey greenhouses have been leased for several years to the Reading Floral Co. The new firm is composed of two Reading young men.

CLINTON, IND.—J. H. Ricketts has again leased the Sunnyside Floral Co. of Herman Raabe, and has possession. Mr. Ricketts has been running a store at Numa. Mr. Raabe will for the present be in a store in Terre Haute.

 CUT FLOWERS AT WHOLESALE

New Bedford, Mass.

Trade here the past week has been very slow, funeral orders being the only work that has kept things going. There is a fairly good crop of flowers coming in. Carnations retail at 60c. per dozen, a few at 50c. per dozen; Roses retail at \$1.50 per dozen; Violets sell quite good; they have now dropped to \$1 per 100 blooms; Sweet Peas sell at \$1 per 100 blooms; Paperwhites retail at 60c. per dozen. Some Daffodils are now coming in, and retail at 60c. and 75c. per dozen, Golden Spur bringing 75c. per dozen, and Princess 60c. per dozen. Mignonette sells at 50c. per dozen. Some nice Freesias are to be seen, and these help out fine in funeral work.

R. H. Woodhouse will have about 15,000 Geraniums, also a fine lot of Vincas this season.

The past week was very cloudy, with the weather mild. We are now in the midst of a cold spell.

Peter Murray is seeding in some nice flowering plants.

Manuel B. Sylvia of the New Bedford Nurseries is putting the finishing touches to his new greenhouse. He will grow Geraniums and other bedding plants for the Spring trade. In the Fall he will plant Carnations.

Wm. Livesey is getting ready for his annual Smilax trade. He will grow about 10,000 plants the coming season.

E. G. Davis is growing some nice Fern fronds, which he is shipping out of town.

Wm. S. Brown is supplying the florists with good cut sprays of Asparagus Sprengeri and plumosus.

S. S. Peckham has once more got things in running shape at his Fairhaven plant. Things look fairly good for Easter; most of the growers have already sown their Ten Weeks Stock seed, also Candytuft. This line is a big factor here on Memorial Day. Hortico.

Indianapolis

McKinley Day proved a revelation to those who thought the popularity of the favorite flower was on the wane for this occasion. Hundreds of Carnations, yes, thousands, were disposed of at 10c. each. These not well supplied began an early and systematic search for every Carnation available in the vicinity. Saturday, always a good sales day, proved particularly so on this day.

The Indiana delegation returned with enthusiastic praises for the Pittsburgh exhibition and hospitality. Walter Coles, of Kokomo, stopped off long enough en route to apprise his friends in regard to the prize winners.

Mr. and Mrs. Eugene Dailedouze of Brooklyn, N. Y., are visiting Mr. and Mrs. John Bertermann, and Mr. Dailedouze is also enabled to discuss Carnation topics as he viewed them at the convention.

Tomlinson Hall Market reports a busy week and has little left at the close. Poised plants are moving well there.

Sidney Wertheimer and William Dykes of New York visited the trade this week. Myer Heller of New Castle is spending the Winter in Florida.

Albert Kempke is to erect another greenhouse this season. Carnations are to be provided for.

Alfred W. Brandt, who has been on the sick list, is again able to attend to business.

Edward Bertermann is still recuperating at Martinsville. I. B.

WAYNESBORO, PA.—Peter Olsen of the Chicago Carnation Co. of Joliet, Ill., made a trip to Henry Eichholz's place here to inspect the stock of the Lawson colored snort of Eachantrass, "Washington," and took back with him over 10,000 cuttings which were ready for the company. He thinks "Princess Charming" is a coming variety.

HONOLULU, Mass.—The Middlesex Co-operative Garden Co. has incorporated. The capital stock is \$25,000. An advisory board consists of Representative Albert Battley Maynard, florist, and others.

STAATSBURG, N. Y.—James MacFarlane, who owns several greenhouses situated at the head of Elm ave., recently met with quite a serious accident. He was shoveling the snow from the glass on one of the houses when he broke through the sash, cutting one of his legs quite badly.

Firms Who are Building

NORTH BRIDGTON, ME.—Chas. L. Chadbourne is building an addition to his potting shed and one new house, 20x50 ft.

2-Killarneys

At this season both the Pink and White are at their best, large heavy buds, plenty of substance, a money making pair for every florist.

Philadelphia

The sales of Carnations for McKinley Day did not realize such proportions as were expected, although the retail stores laid in an extra supply of flowers. The weather was far from pleasant, and while display cards were prominent in the windows of many of the stores, little attention was paid to the fact by the general public.

Chas. Kent has closed his store at 52d st. and will confine his energies to his other floral establishments.

Some of the best Daffodils and Tulips seen in this market are coming from the greenhouses of Wm. K. Harris.

Decorations for many society events go on apace and keep a large force of men busy.

J. J. Habermehl's Sons recently arranged the decorations for the Randolph ball in the Bellevue-Stratford Hotel and last week furnished the decorations for the annual gathering of the Kettle Club, recently held in the Union League Club rooms.

The Robt. Craig Co. is making preparations for early shipments of Begonia Gloire de Lorraine stock, the quality of which will be fully equal to that sent out in former years. The stock is usually potted twice to insure stronger plants.

Emil Geschick, of Germantown ave., is much pleased over the outlook for the coming season. He has been successful in educating his customers to buy Orchid blossoms, and in order to supply them the coming season has placed a large order for newly imported plants, the arrival of which, together with those plants already on hand, will enable him to devote an entire greenhouse to their culture. Eachantress Carnations prove the most profitable variety to grow here, and pa-

Chicago

Saturday was McKinley Day, which created a stronger demand in the Carnation line, and while the people around Chicago did not increase the demand to any extent, very few being worn in comparison to last year, some banquets and dinners given in honor of the occasion used Carnations entirely for decorations. More noticeable was the demand out of town, and the shipping orders consumed all Carnations, especially red ones, that were obtainable, the price for this time advancing to 5c. each.

The coal situation that has been such a serious question for some weeks past has been relieved. At present there seems to be plenty of coal available. The trouble was owing to the refusal of one railroad to accept cars from any road but its own, but this difficulty has been overcome and the roads at the present time are switching wherever desired, thus relieving the congestion of cars in many of the yards. The price has also fallen to a marked degree.

It is said by some of the wholesale dealers in Violets that it would be a good plan for each to contribute a few dollars and purchase an immense quantity of ar-

to John Lydig. Mr. and Mrs. Lydig will make Seattle their home. Congratulations are extended to the newlyweds.

A decided shortage in Jonquils is being experienced by all growers of these flowers. Nearly all purchased the bulbs from the same firm in Holland, all meeting with the same results, many blind bulbs being found in all bunches.

August Jurgens is sending in a fine lot of novelty Tulips that he finds no difficulty in disposing of at a very fair price. Tulips are most acceptable at this period.

A beautiful display of Valentine boxes and requisites for St. Valentine's Day is to be seen at the A. L. Randall Co.'s store; this was followed up by a fine display of Dellwood gold boxes for which the company has the agency.

The J. B. Deamud Co. is receiving shipments from Stollery Bros. of Evanston, Ill., of La Reine Tulips that are remarkable both in coloring and quality. Some beautiful yellow Narcissus 'Soleil d'Or' are also to be found at the store.

Winterson's Seed Store is in the hands of the painters and decorators and this week presents a general housecleaning appearance. The new decorations will add greatly to the appearance of the store, and put things in spick and span order for the Spring business.

Ed. Winterson arrived home from Pittsburgh on Monday munched pleased with the trip. He was too busy to enter into details.

C. L. Washburn brought home a memento from Pittsburgh in the shape of an ulcerated tooth, the result of a cold contracted while there. Notwithstanding this Mr. Washburn says he is like the little girl who went to a party and had the "bestest time of her life." He says this is how he feels about his trip to the A. C. S. convention.

The report from Peter Reinberg's is that they have, so far, been able to fill all shipping orders, but could not begin to cope with the call for stock from the city trade.

Even from the Poehlmann Bros. Co.'s extensive plant the stock is consumed rapidly, many orders having to be refused owing to scarcity in all lines of stock.

Vaughan & Sperry are getting their share of the stock on the market, and

state that while they seem to have practically nothing on hand it is surprising to see how high the receipts figure when stock is cleaned up.

The store vacated recently by Bentley & Coatsworth in the Atlas Block has been rented to a firm dealing in office fixtures. Mr. Coatsworth is busy this week removing the fixtures and stock from the store.

Sol. Garland of Des Plaines has not been in the best of health this Winter, being troubled with rheumatism.

Fred. Sperry, of Vaughan & Sperry, is again fully recovered and is attending to business.

Definite steps toward reclaiming for the city and the South Park System made lands along the South Shore valued in the neighborhood of \$500,000, were taken Monday night by the city council.

The West Park Commissioner has raised the salaries of most of its employees with the exception of that of Jens Jensen, whose salary of \$2400 has been cut to \$1000. Mr. Jensen will, however, be compensated for any extra work done for the Park Board. This was not, practically, a reduction of salary, as Mr. Jensen is relieved of many previous responsibilities.

The Executive Committee of the Chicago Horticultural Society will meet Feb. 4, at the Art Institute.

In last week's notes the item referring to an article on how to grow plants and vegetables by the aid of electricity should have been attributed to Mr. Leonard Kill, not Mr. Leonard as mentioned.

Bowling

The Florists' League bowled as usual last Thursday evening, January 27, at Bensinger's Alleys. Following were the scores:

CARNATIONS.	vs.	ROSES.
700 771 728		737 759 695
VIOLETS.	vs.	ORCHIDS.
636 776 725		721 724 754

St. Louis

The death of E. C. Burrows, last week, caused a shock to his many friends in the trade here. Mr. Burrows was at one time a member of the local Florists' Club and of the firm of Pilcher & Burrows, commission brokers. The funeral was held at Peoria, Ill., on Saturday, Jan. 29.

Alex. Halsted of the St. Clair Floral Co., Belleville, Ill., was a caller last week. Mr. Halsted reports they are cutting a fine lot of their 20th Century Carnation and also of Rose Pink Enchantress of the Lawson color. Mr. Halsted fell on the ice recently and broke his left hand, which is now on the mend.

W. C. Smith & Co. is receiving a lot of extra fine California Violets and an abundance of Carnations from their Kirkwood growers.

Fred Ammann of Edwardsville reports the Rose crop is very much off; still, he is sending some extra good quality stock to Krehl.

The florists in the downtown districts did a big business Saturday, Jan. 29, McKinley Carnation Day. Foster, Otto Sanders, Riessen, Grimm & Gorley and Alex. Siegel say they had a big supply but cleaned up early.

In the West End, among those who have show houses, it is said the plant trade has been very good since the first of the year. Ellison, Weber, Windt and Kalish are all well stocked with fine blooming and decorative plants. On Grand ave. Waldbart, Ayers, Windler and Bergsternman are making extra fine window displays of plants and cut stock. All report good trade for the month of January.

The lease of the Michel Plant and Bulb Co.'s place was sold at auction on Monday, Jan. 31; it has seven years to run.

Don't forget the Florists' Club meeting next Thursday afternoon, Feb. 10. President Windler and Secretary Beneke say it will be a very interesting one and Treasurer Smith's paper on "His Troubles as a Wholesaler" will make them take notice. We are looking for a big delegation of suburban members at this meeting.

ST. PATRICK.

*Insure Yourself Maximum Crops of Excellent
Quality by Feeding and Nourishing
Your Plants With*

Evergreen Brand Fertilizer

*Specially manufactured for growing Flowers, Ferns,
Palms, Etc.*

Its recommendation is based upon careful, extended and disinterested experiments; showing that this material is a nourishing, easily-available food for crops.

It consists of about half Animal matter and half Minerals, treated and refined; thus it is free from all deleterious substances and will not burn or injure the most delicate plant root, unless an extraordinary amount is applied at the same time.

It is immediately available, and its effect upon most crops may be noticed within six days after its application.

It prevents the onslaughts of plant disease or insect pests.

It will greatly benefit all greenhouse crops; notwithstanding the richness of the prepared soil, since it furnishes all the Plant Food elements in

available forms and sufficient quantities to meet the needs of the plants.

It should receive careful attention, because its right use permits not only an economical utilization by the plant but a control of its growth; it may be used in such a way as to change the natural tendency, and thus improve it for specific uses; thus, in addition to the increase in yield which it produces, it enhances its market value.

Its uniform action seems to be to stimulate the capacity of the plant for absorbing water and developing foliage and stem growth, and to bring out numbers of new shoots; hence with Roses and other flowering plants, the best results are secured when this fertilizer is applied during the early growing period, as the energies of the plant are immediately concentrated upon developing its growth.

Can be used at any time during the growing season, dry or in solution.

Put up in 12-pound cans, price \$2.00

Fulton, N. Y.

Trade is very satisfactory. Funeral
orders have been large and plentiful,
which business has kept stock worked
up very close. Pot stock here, as in
many other places, moves more slowly
this year, for some reason; still the
florists claim their trade is 100% better
than last year.G. W. Perkins has a very nice showing
of Azaleas, Paper Whites, Primulas,
etc. His Sweet Peas are very good.O. Wetherby is very strong on Ciner-
arias and Primulas, which are a very
good lot of salable stock. H. Y.

ration Day which ought to retail at
from 50c. to \$1.50, even higher; that is
the time of the year when there is a
natural demand for the Geranium, and
it is only a matter of educating the
people to appreciate and pay for a
superior article. If stock of this kind
is shown it will find a buyer sooner or
later. It doesn't make any difference
where a florist might be located or what
his trade might demand, there are
bound to be customers, even if only a
few, who are willing to pay a little ex-
tra for something out of the ordinary,
and it is that kind of stock that it pays
to grow, especially by the smaller grow-
er—something which with just a little
extra care and trouble, but with but
little more handling, will bring twice
and three times the price as ordinary
grown stock.

Seeds

Reminders for the Retail Growers

Of the seeds to be sown by the average
retail grower at this time, Lobelia,
if short on them, ought to go out at
once. It takes at least 12 weeks to get
them into shape; they are very slow
when grown from seed. For a dwarf,
Crystal Palace compacta is still one of
the best. Don't forget to work up a
good stock of that splendid double one,
Kathleen Mallard, it certainly is a good
thing; this, of course, can only be
propagated through cuttings. It is still
time to sow out Begonias such as Ver-
non and Erfordii; they will make nice
strong plants by May if kept moving.
Myosotis palustris semperflorens, or
Forget-Me-Not, if sown out now will
give nice bushy plants by the end of
April. Sow thickly and use good rich soil
for the plants when transplanting them,
and keep the stock in a cool house. Bellis
perennis or English Daisy should also
go out at once if blooming plants are
wanted in Spring; they require the
same treatment as the Myosotis. It is
not too late to sow out Cyclamens; fine
plants can be had from seed sown in
February; they bloom a little later than
those sown months ago and won't make
as large plants, yet come very handy.
If you have bench room, sow out some
more Sweet Peas for Spring flowering,
the ones which are in bloom or come
into bloom now won't last until then, at
least are not to be compared with
those sown out now during April and
May.

Cannas

Proper Time to Buy, if Short on Stock

The Canna is one of the important
plants which we use for bedding pur-
poses, and only too often we find our-
selves short on certain varieties long
before the season is over; or, what is
as bad, we sell every plant of at least
the better sorts without setting aside
a good number for stock. I know we
have done it and think others are in the
same fix. It is an awful temptation to
have a certain lot of plants set aside
for stock and have someone offer you a
good price for them. One doesn't fully
realize the folly of selling them until
about this time of the year, when we
come near the time to start the dormant
roots. There couldn't be a better time
than the present to buy if short on
stock. Most growers and seed houses
offering Canna roots have their assort-
ments still complete, but it won't be long
before some of the varieties, especially
those known as the best bedders are
gone. Another reason is that the sooner
roots which you haven't got yourself
under the bench or in the root house
are started under cover, the roots of
Cannas do not improve when cut into
pieces 5 to 6 inches long and are packed
in boxes. The sooner they are taken
out and put into soil the better. You
can keep a Gladiolus or a Dahlia root
without soil, nicely, for a much longer
time than a Canna; to keep the latter
in perfect shape it is necessary to have
a good ball of soil surrounding the roots
practically at all times, and the newer
varieties or large flowering sorts are
far more particular in that respect than
the old standbys we used to grow for
their ornamental foliage.

Pansies

Transplanting the Young Stock Twice
Before It Goes Outside.

The young stock from seed sown
about the middle of December is now
ready to be transplanted. While we
ought to grow the plants with as little
handling as possible, it is hardly right
to let them remain in the flats, into
which they are being transplanted now,
until the middle of April when they go
out into the frames. Better way, by
far, is to transplant them again into
other flats about March 20. Of course,
with the plants sown out now, or later,
one transplanting is sufficient. While
this extra work may be quite an item of
expense to the grower who handles
twenty or more thousand Pansies, the
retail grower who uses only a few thou-
sand will more than be repaid by this
work. A Pansy when left growing in
the seed box is like an Aster, it will
bloom there if left long enough, but the
little plants will be worth less. On the

other hand the extra transplanting, I
speak of, will help to make bushy plants
and better plants in every respect. Why
I talk about this second transplanting
now is that the grower who is doing
this need not allow more than
one inch of space between the seedlings
when transplanting them at this time.
It isn't, by any means, too late to sow
out more seed now; there is plenty of
time yet to do this and get nice plants
by Spring.

Salvia

Propagation Through Cuttings

Perhaps no other plant the grower
uses for bedding out has increased in
popularity more than the Salvia. It is
among the best paying plants the retail
grower can handle. Good stock can be
grown in a short time and it brings as
much, if not more than a lot of other
things we have to carry, therefore it
deserves pushing. Those who grow
their stock through cuttings will by this
time have the stock plants in warmer
quarters, where the cuttings will grow
numbers of cuttings, which in sand with
bottom heat root freely in a few days.
It is remarkable the number of cuttings
one good sized old plant will furnish.
This manner of propagation is the only
right one for named varieties of Salvias,
especially Zurich that grand dwarf sort,
and best one of all the bedders, for no
matter from what plants you may save
the seed there is always a certain per-
centage of it which doesn't come true.
Even with the other varieties of Salvias,
such as Lord Fautleroy, another good
dwarf one, Clara Bedman or Ball of
Fire, it is always best to grow them
from cuttings, then you're sure they are
true to name. What can be more disap-
pointing than to plant out a large bed
of Salvia of a certain variety and find
by August a great difference in the habit
of the plants, which will make the bed
look unsightly—you are never certain
when growing any of the above varieties
from seed.

Plants Grown from Seed

With all the new sorts which have
been introduced in the last few years,
the old Salvia splendens still holds its
own for mass effect in front of shrub-
bery, and even for solid beds it is still
used in great quantities, and I suppose
will be for some time to come. The
real drawback about it is its late
blooming, but when once in bloom we
forget the fact that—or rather over-
look it—this variety may as well be
grown from seed, especially where thou-
sands of them are grown. Seed sown
now will produce splendid blooming
stock by May; by blooming, I don't
mean to say that the plants will keep
on blooming when planted out, but each
plant will have a fine spike of scarlet
flowers when a customer makes her se-
lection; and to anyone not familiar with
Salvias it is almost impossible to sell
them, unless the plants are in bloom
when they are purchased. To grow Sal-
vias from seed means that it is neces-
sary to use good soil and a cool house;
this will give you a stocky growth and
dark leaves. Sow the seeds thinly—a
little bottom heat will make them
germinate quicker—and don't let the
small seedlings remain too long in the
seed boxes or flats; nothing is more
easily stunted than a Salvia, plants
should be kept moving at all times.

Southbridge, Mass.

This town has recently been brought
into unfavorable notoriety. Through the
efforts of its only florist, Allan H. Faxon,
who has been connected with the South-
bridge National Bank for years, running
his florist's business as a side issue, a
big defalcation was discovered. About
one year ago, Mr. Faxon was transferred
to the Southbridge Savings Bank. He
has been hard at work on the books with
the result that the bank treasurer was
found to be a defaulter to an amount
which may exceed \$150,000. Bank exam-
iners from Boston have now taken pos-
session but Mr. Faxon is still retained
to assist.

Southbridge looks to Worcester for
most of her floral supplies.

CAROLUS.

Washington, D. C.

The dark weather which has prevailed
throughout January instead of reducing
local supplies of cut flowers seems to
have increased them and especially is
this true of Carnations, which have been
abundant all Winter and in excess of
demand.

Usually at this season social functions
consume much of the good flowers, and an
oversupply in January is about 60 days
in advance of the season when the florist
expects such conditions.

February 9 marks the advent of the
Lenten season, when it may be expected
according to custom, that the demand
will again lighten.

JAS. L. CARRERY.

OUR CAST IRON CENTRE GUTTERS

Not cast in brittle stove plate iron—but high grade, tough iron. Are not crooked—are cast smooth and straight.

Lengths of 8 feet 4 inches, making it necessary to use only half the posts required with the shorter gutters that are on the market.

Every gutter of ours is equipped with roof bar brackets which stiffen the roof and prevent bar end rot.

sery Stock, Conifers, Flowering Plants, Fruits, Hardy Ornamental Shrubs, Hardy Herbaceous Flowering Plants, Peonies, Irises, Roses, Foliage and Decorative Plants, Grasses, Field Seeds, Implements and Supplies. The publication is profusely illustrated, and appears within handsome covers lithographed in colors, the front page bearing a design, in natural colors, representing the firm's Sterling Mixture of Single Poppies, and the rear page, also in colors, showing their early Minnesota Tomato and Sterling Cucumber; the inside pages carry a lawn view, and a representation of Roses, also in natural colors.

FREDERICK W. EBERLE, 112 South Pearl st., Albany, N. Y.—Catalog for Spring, 1910, of Vegetable and Flower Seeds. This is a 56 page publication printed on unusually fine paper, handsomely illustrated, and bound within covers decorated with designs in half tone, the front page showing Eberle's Mammoth White Verbena and the rear page a beautiful lawn view showing results obtained with Eberle's Special Lawn Grass Seed. The publication opens with an announcement by Mr. Eberle that the firm of Sherman & Eberle has recently been dissolved by mutual consent, and that he has purchased the business and will continue it with the help of the clerks and salesmen who were connected with the late firm. The catalogued line of Vegetables opens with Peas, among them Alderman and Defiance, varieties of recent introduction. Among the other specialties illustrated and described are Early Velocity Sweet Corn; the new Tomato Royal Globe; the Muskmelon Selected Surprise; and selected Arlington White Spine Cucumbers. The regular line of Vegetable Seeds, is well set out, each variety accompanied with cultural directions. The list of flower seeds is well chosen, and the illustrations of the different varieties are both large and artistic. Two pages are devoted to Hardy Dormant Roses, and goodly space to roots and bulbs. A line of implements, tools and horticultural requisites occupies the end pages.

THE MCGREGOR BROS. CO., Springfield, O.—McGregor's Floral Gems for Spring of 1910. A 112 page Catalog devoted almost wholly to specialties and staples in floral supplies. Twenty-seven pages are devoted to Roses and the line is a most complete one and is seen contains many of the most desirable Roses of late introduction. Begonias, Chrysanthemums, Carnations and Cannas are all subjects of sections of the Catalog. Four pages are devoted to decorative Palms and Ferns, the latter being most of the newer varieties and many of the kinds suitable for dishes and boxes. There are four pages devoted to Geraniums and one to Fuchsias. The plant section, generally, is very large, and includes practically everything that can be shipped on "roots." Seven pages are taken up with Flower Seed Novelties and Specialties, among which are new Philoxas, Poppies, Stocks, Dahlias, Verbenas, Pansies and Asters. The general list of seeds is, as usual, quite extensive. Color plates show six varieties of improved garden Carnations, and six Japanese Chrysanthemums. The publication appears in handsome lithographed covers, the Rose Marechal Neil embellishing the front page, and six garden Roses the back page; the first inside page carries representations of Cannas, and its companion page flowering and fruiting vines; all these subjects appear in natural colors. The inside pages are profusely illustrated.

S. M. ISBELL & CO., Jackson, Mich.—Catalog of Isbell's Northern Grown Seeds, for 1910. This publication, which contains 104 pages, covers Vegetable and Flower Seeds, Bulbs and Roots almost entirely. The larger portion of the book is devoted to Vegetables, and the line described is both complete and extensive. Twenty-four pages are taken up with novelties and specialties, among which are Isbell's New Dwarf Tomato, a new variety found in a field of Florosa and introduced for the first time; new varieties of Corn, Beans, Beets, Cabbage, Cucumbers, Lettuce, Muskmelons, Peas, Radish, and Peppers. The general list of Vegetables is very extensive, with descriptions more than ordinarily full. Grasses and Farm Seeds occupy a number of pages. In floral novelties there are new Verbenas, Poppies, Stocks, and the Galety Spencer Sweet Pea; a new flowering Bean called The Butterfly; a new Mexican Zinnia called Gypsy Girl, dwarf in growth and very floriferous, flowers bright yellow broadly blotched brownish red; the new Salvia Mountain Beauty; the new Mikado Pink Aster and Dianthus Velvet Queen. The general list of flower seeds is very full and comprehensive; and the list of bulbs and roots meets ordinary requirements. Garden requisites, poultry supplies and fertilizers occupy the concluding pages. The catalog is well illustrated and is found in lithographed covers the front page bearing representations of Corn, Muskmelon and Tomato novelties; the rear page flower and vegetable novelties.

Catalogs Received

THE CONNON FLORAL CO., Hamilton, Ont.—Wholesale Price List of Bedding and House Plants, Roses, Vines, Shrubs and Perennials.

SMITH BROS. SEED COMPANY, Auburn, N. Y.—Catalog of Vegetable and Flower Seeds for 1910. The publication embraces 32 pages and the cover is in colors, the front page bearing a representation of Sakurajima, the Giant Radish of Japan, the rear page one of Smith's Giant Flowering Asters and new Bouquet Asters. Illustrated.

W. W. BARNARD CO., Chicago, Ill.—Catalog for 1910, of Vegetable and Flower Seeds, Field Seeds, Bulbs, Roots, Perennials, Roses, Flowering and Ornamental Hardy Shrubs, Fruits, Ornamental Deciduous Trees, Implements, Garden and Greenhouse Supplies and Poultry Supplies. The publication contains 96 pages and appears within covers lithographed in colors, the front page bearing natural representations of tall branching Asters, the rear page Vegetable specialties and Hydrangea paniculata grandiflora. Illustrated.

W. W. WILMORE, Denver, Cal.—Dahlias for 1910. The annual catalog of a Dahlia specialist and very complete. Besides the list of novelties and standard varieties there is much information in regard to Dahlias which is of value. A new variety, Corona, is in the novelty section. This has been called the Carnation Dahlia. It is a miniature decorative form, white in color, and fully double, and judging from the illustration would seem likely to become a florists' flower. There are many other novelties which seem to appeal to the Dahlia enthusiast, and the publication should have a general circulation. The concluding section is devoted to a line of Gladioli, Peonies, Hardy Herbaceous Plants and Roses.

NORTHROP, KING & CO., Minneapolis, Minn.—Twenty-sixth Annual Catalog of Sterling Seeds. A 136 page publication covering Vegetable and Flower Seeds, Bulbs, Roots, Ornamental Nur-

For Strength

You can't equal a U-Bar house, because all structural members are steel. Durability is assured by the galvanized, aluminum finish. With the great strength and durability go increased lightness, attractiveness, wonderful productivity and low cost of maintenance. Jamesville, N. Y.

Friend T. M. Miller and his staff were as busy as bees when I dropped in there recently. Trade is and has been remarkably good with him right along; funeral orders have been very plentiful. He is pleased with his new water plant, which has entailed a heavy outlay but will pay for itself in a few years. The show house is quite attractive with Azaleas, Begonias and bulb stock; the Carnations and Callas are looking good; the latter are a remarkably good lot, one bloom I saw measured over eight inches across.

The bedding stock is very large and looks good. The beautiful pink seedling Geranium I have mentioned before will be shown at the S. A. F. convention at Rochester, and I am sure all will agree that my estimation of it has not been overdrawn.

H. Y.

Albany, N. Y.

The past week business has been rather dull; not very much has been going on, plenty of stock of all kinds on hand but little ready sale for it. Bulbous stock of all kinds is coming in plentifully and Azaleas and other pot plants are also plentiful. McKinley Day was well observed here, plenty of Carnations being worn by pedestrians, but the weather was very stormy, snowing all day but warm enough to wear the flower for the day.

The decorations for the dinner of the Albany County Republican Organization to be held on February 17, at Odd Fellows' Hall have been booked by H. G. Eyres.

A. D. Wemple and wife are rejoicing over the arrival of a nine-pound daughter; both mother and daughter are doing well.

John Thomas Trivison of the store of F. A. Danker has taken to himself a bride; the wedding took place on Sunday morning, January 23, and he has the congratulations of all the craft.

The Albany Florists' Club will hold its regular meeting on Thursday evening, February 3, and an interesting meeting is looked for.

W. C. K.

Buffalo, N. Y.

Visitors to the convention from this section were Mr. and Mrs. W. J. Palmer, Mr. and Mrs. Wm. F. Kasting, and Barney Myers. All report having a good time and the convention and exhibition the best ever.

McKinley day seems to grow smaller in interest from the retailers' point of view each year. The Relief mission of this city has been selling Carnations on the streets for the last two years on this day. It has quite a few ladies who work for charity. Their plan is to take all the money they can get for a Carnation, with the motto "none too large and none too small," and the newspapers credit them with getting as much as \$1,800 for the one day's work. How many Carnations they buy or sell I am not able to ascertain, but the local florists held up the price to 10c., which I think is a little high to get the multitude to buy.

The Florists' Bowling Club has new alleys that its members are using, and which are a treat to bowl upon. Everybody seems pleased that the committee has made a change in the location. The

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSEVMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 7

NEW YORK AND CHICAGO, FEBRUARY 12, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the prices quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of *Elegantissima* has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. pans, \$12.00 per dozen.

S. & W. CO.'S
Fertilized Flower Pots

For Growing and Shipping Plants

Made of Extra Heavy Manila Waterproof Card Board. Fertilized. Wire Stitched Seams. Perfect Drainage and Shipped Flat. If you grow Tomatoes or Pot Plants you can't afford to pass over this.

These square pots economize space, give more room to the roots than the tapering round pots. In setting out plants the pots are not removed. Simply unlock the bottom flaps and turn them up (see cut), allowing the roots to grow down.

Gross Weight

Size	Per 1000	250	1000
2 1/4 inch	about 30 lbs.	\$1.00	\$3.00
3 inch	about 40 lbs.	1.50	4.50
3 1/2 inch	about 60 lbs.	1.75	6.50

In setting out plants unlock the bottom, pull pot up one inch and you have a wall to protect the roots against Grubs and Worms.

European Notes

The weatherwise in the olden time were wont to say: "As the days lengthen the cold doth strengthen," and, thus far, their weather wisdom appears to be very well founded, for yesterday, Jan. 27, was the coldest day experienced in northern Europe for a very long time, zero readings being very numerous. Only in the far North was there any great fall of snow, so that our growing plants have had to bear the full severity of the cold and for this they are very ill prepared. The past twelve hours have witnessed a sudden and complete thaw to the accompaniment of storm and flood; changes like these test both health and temper, and many of our strong ones are being laid low.

Universal sympathy will be extended to our Paris confreres who are passing through a terrible experience just now.

RAWSON'S RENOWNED SPECIALTIES

— FOR FLORISTS —

DAHLIAS

To clear a large surplus, we give Florists the first opportunity to purchase some of our latest Dahlias at remarkably low prices. The following list is only an extract from Rawson's florists' catalogue.

FLOWER SEEDS

SALVIA SPLENDENS

	1/2 oz.	Oz.
Grandiflora	\$0.25	\$1.50
The best tall Salvia in the market		
Compacta	.40	2.50
Bonfire	.40	2.50
Hardly any foliage, but masses of flowers.		
Lord Fauntleroy, very dwarf.	.75	4.00
Maroon Prince, deep maroon.	.75	5.00
Fire Ball, most intensely colored	.75	6.00
Silver Spot, leaves spotted, very attractive	.25	1.50
Zurich. The best salvia yet introduced.		
Plants grow very compact, show little foliage and bear heavy flower spikes, which are thickly laden with bright scarlet flowers. Flowers stay in July and remain in bloom with later varieties.		
Patens. (Blue Salvia). 1-16 oz. \$1.00.		
Salvia Splendens. King of Carpeta. The best dwarf bedding Salvia on the market today, outliving even "Zurich."		
The plants branch from the bottom and to such extent that the main stem is never visible. All side branches drop compactly to the ground, making the whole plant a perfect half ball of fire. The plant grows but 15 inches high and flowers even earlier than "Zurich."		
The veteran grower, Mr. F. J. Bedman, says: "About the Salvia, 'King of Carpeta.' It has done very well considering the dry weather that we have had, and I consider it one of the grandest dwarf salvias that I ever saw."		

AGERATUM

Extensively raised as a pot plant and used for edging.	
Lasseaux	1/2 oz. 20c. \$0.60
Mexicanum	.15
Album. Large flowering white	.25
Blue Perfected	.30
Dwarf Imperial White	.25
Dwarf Imperial Blue	.25
Dwarf Swanley Blue	.30
Dwarf Little Dorrit	.25
Dwarf Little Blue Star, 1-16 oz. 75c.	

ANTIRRHINUM

A most valuable plant for the cut flower market, easily grown and very profitable; we have been careful to select but such as are ready sellers. **RAWSON'S TALL GIANT.** This strain grows three to four feet high and is covered about two-thirds with gigantic flowers of grace and beauty. 1/2 oz. \$0.40

Floest Mixed	1/2 oz. \$0.40
White	\$0.25 .75
Scarlet	.20 .60
Yellow	.20 .60
Dark Rose	.20 .60
Delicate Pink	.20 .60
Coral Red	.25 .75

ASTERS

Rawson's New Midsummer Aster
The colors are true and hardly any open-centered flowers among them.

1/2 oz. Oz.	
Pure White	\$0.60 \$2.00
Delicate Shell Pink	.40 2.00
Royal Purple	.60 2.00
True Lavender	.60 2.00
Bright Rose	.60 2.00
Floest Mixed	.60 1.50

Aster, Rawson's Late Branching. Flowers are very large in size and borne on long, stiff stems. It is one of the best and most popular varieties for late flower markets.

1/2 oz. Oz.	
Floest Mixed	\$0.25 \$0.75
Crimson	.30 1.00
Dark Blue	.30 1.00
Light Blue	.30 1.00
Rose Pink	.30 1.00
Shell Pink	.30 1.00
Scarlet	.30 1.00
White	.30 1.00

Dawn of Day. (Novelty, 1908). The earliest flowering Aster in existence. Fine white, perfect in form and growth, long branching stems and flowers; often three weeks ahead of Queen of the Market. It is of branching habit and very full and if freely cut will continue to bear blooms until late in Fall. 1/2 oz. 50c. oz. \$3.00.

Rawson's Daybreak. This variety must not be compared with the strain offered elsewhere and a trial will convince the ever-so-critical of its superiority. 1/2 oz. 40c. oz. \$2.50.

Rawson's Purity. (Pure white). Of the same type as Daybreak, differing only in color, which is a pure, glistening white. Just as free-flowering and symmetrical as Daybreak and undoubtedly unsurpassed as a white bedding variety. 1/2 oz. 50c. oz. \$3.00.

Rawson's Queen of the Market Aster. The best early Aster for the florist, quality being very much improved.

Finest Mixed, 1/2 oz. 15c. oz. 50c.	
Crimson, Dark Blue, Light Blue, Rose, Peach Blossom, White. 1/2 oz. 20c. oz. 60c.	

All the buildings near the Seine are flooded, and as the majority of the principal seed firms are located near the Hotel de Ville, where the flood is at its worst, the losses will be enormous. Those acquainted with the sanitary conditions of some parts of Paris will not be surprised to learn that an outbreak of epidemic disease is feared.

From the far South we learn that the rapid Rhone has carried off the surplus waters up to the present, but all the country between Dijon and Paris is converted into one great lake. Thus far, little news has reached us from the West, but those acquainted with the Loire will be very anxiously awaiting reports on crops growing in the beautiful valley contiguous thereto.

In England, the death is announced of Jonathan Cocks, for very many years a leading representative of the leading London seed firms; and J. Barnshaw, for many years representative of William Bull, who, with his wife, was burned to death on Jan. 23.

In presenting to Harry J. Veitch his portrait done in oils the Royal Horticultural Society honors itself, and the presentation of a copy of the same to Mrs. Veitch is one of those graceful acts for which the worthy secretary is justly noted.

EUROPEAN SEEDS.

American Notes

Trade Increases

The past week trade in all lines of the seed business has gathered considerable headway. The mail order houses are well satisfied with the way orders are beginning to come in, and another week or ten days will find this division of the Spring seed selling in full swing. The catalogs are now practically all out, and their combined influence in starting the season's activity is very marked. It bids fair to be a year of very active business, as never before have the general public so well understood that seeds in practically every line are in more or less short supply; this widespread feeling that there are only small supplies will cause very early buying, and as the months of March, April and May always take care of themselves, so to speak, as far as seed sales are concerned, an unusually long seed selling season may be said to be just opening. Especially have both the market garden and private gardeners' trade been good ever since the year turned; orders have averaged larger than for many years, and are certainly, so far, very satisfactory. It is going to be a great year.

China Asters

A couple of decades ago "China Asters" began to be greatly improved, until now we have Asters fully and truly as elegant as Chrysanthemums. In the old days, that is, before the advent of the improved branching types of Asters, the Victoria and Truffaut's Peony-flowered Perfection were considered the acme of quality, and many have been the grand displays of these two elegant sorts staged at horticultural exhibitions in the past. These two varieties are considered as elegant today as they were twenty-five years ago, but in addition now we have innumerable splendid sorts of American origin. Asters will be in larger request than ever the coming season, and a good assortment of the best sorts will be fully appreciated by your flower seed customers. Many expert growers contend that the various varieties of branching Asters are taken all in all, the most satisfactory of any on the market today, and certainly there is much to be said in their favor. The branching Asters are very profitable for the florist and wholesale cut flower grower, for not only do they have good stems and bloom profusely, but they also keep flowering profusely from August until late Fall, if proper selection of the various varieties are planted. The same reasons render these Asters favorites with the maker of the home garden. There are two varieties of recent American origin that deserve more than a passing notice—Crego's Giant White, and Crego's Giant Pink. The two sorts are identical except in color, the first a pure, glistening white, the other a most lovely soft shell-pink, of that delicate shade that is always so admired. Both these Asters grow about two feet in height, branch well, have long and strong stems, and are most artistic, fluffy, Chrysanthemum-like flowers, often five inches in diameter; so very elegant are they that sales of the blooms were made last season at \$1 a dozen. Another superb Aster that has been on the market now some five or six years,

Dreer's Superb American and Imported Asters

We take special pains to secure only the very choicest Asters and feel sure nothing better in quality can be had at any price. Our stock of American varieties are grown under our own supervision, while the Imported sorts are procured from the most reliable sources.

Dreer's Superb Late Branching Asters

The finest Aster for late August and September blooming.

The plants form strong, branching bushes, 2 to 2½ feet high, bearing on long, strong stems their handsome Chrysanthemum-like flowers, which, under ordinary cultivation, average 5 inches across. The form of the flowers, together with the length of the stems, places them at the head of Asters for cutting. They come into bloom from two to three weeks after the average type, usually being at their best during September.

	Trade pkt.	Oz.
Azure blue, A rich deep lavender	\$0.25	\$1.00
Pure White, Extra fine stock	.25	1.00
Shell Pink, An exquisite shade	.25	1.00
Rose Pink, A very desirable color	.25	1.00
Deep Rose, Rich and brilliant	.25	1.00
Deep Purple, Royal deep blue	.25	1.00
Lavender, A pale greyish-lavender	.25	1.00
Crimson, Very rich	.25	1.00
Finest Mixed, All the colors	.25	.75

Dreer's New Late Aster "Crimson King"

A superb new late-branching variety, with perfectly double flowers of rich, rosy crimson, full of fire. Fine for cutting, showing up well under artificial light. 50c. per trade pkt., \$3.00 per oz.

Queen of the Market Aster

Crego's Giant Comet Asters

Magnificent fluffy flowers, averaging over 5 inches across, with long strong stems; the finest of this type. Comes into bloom in August, continuing well into September, and, unlike most of the Comet sorts, stands when cut and is a good flower to ship. We offer two colors, our own saving, of the highest quality.

	Trade pkt.	Oz.
Shell-pink	\$0.40	\$2.50
Snow-white	.40	2.50

Dreer's New Aster "Pink Beauty"

A magnificent cut-flower variety, in bloom from early August until well on in September; 24 to 30 inches high; flowers average 4 inches across, on long, strong stems. Color a delicate bluish pink, and pronounced by experts to be the finest pink midseason sort yet introduced. 50c. per trade pkt., \$4.00 per oz.

Late Aster "Violet King"

A new and distinct color in the Late Branching class, fine large double flowers of a pleasing shade of violet, a strong, free grower and very free flowering. 40c. per trade pkt., \$2.00 per oz.

Early Wonder Asters

This is the earliest Aster in cultivation, being in full bloom when Queen of the Market is only in bud, frequently coming into bloom in late June. Very valuable for cutting.

	Trade pkt.	Oz.
White, Pure glistening white	\$0.40	\$2.00
Pink, A good, clear pink	.40	2.00

Dreer's Superb Late Branching Aster

Four Fine American Asters

Daybreak. Of symmetrical growth; attains a height of 18 inches, and produces during August, perfect globe-shaped flowers, of a delicate pink tint. 50c. per trade pkt., \$2.50 per oz.

Lavender Gem. One of the most beautiful Asters. Of Comet type, with large artistic, loosely-arranged flowers of the most charming shade of lavender imaginable. 50c. per trade pkt., \$2.50 per oz.

Snowdrift. A most valuable variety, coming into flower in July, with superb plummy snow-white flowers of the Ostrich-feather type. 50c. per trade pkt., \$2.50 per oz.

White Fleecy. One of the largest and most perfect of the Comet type, bearing flowers 5 inches and over across, formed into a plummy globe of glistening white. Blooms in August. 50c. per trade pkt., \$2.50 per oz.

Imported Asters

QUEEN OF THE MARKET ASTERS.

but which would seem to increase in popularity with each succeeding season, is the Violet King. It would be difficult to conceive of a flower more truly elegant. In form it is quite distinct from any sort; its petals somewhat resemble the quilled varieties, but are larger and broader and so arranged that the crown is completely covered. The individual flowers are large, measuring when well grown from four to five inches in diameter; but it is its superb color, a very rich and at the same time soft violet-lilac, that makes it a favorite. It is no easy task to describe such an elegant bloom, it must be grown to be appreciated. Space forbids a further reference to the many other splendid Asters of American origin that have recently been introduced, but so many elegant varieties are there that a fine assort-

ment for your customers can without difficulty be obtained.

New York Seed Trade

Every day now seed selling is gathering momentum; the early orders are averaging even better than a year ago, although the seed catalogs on the whole were somewhat late in going out. The weather, the coldest of the Winter this week, has been most pleasant and favorable to trade.

Peter Henderson & Co. have been receiving an unusually large number of early orders; their offerings of Sweet Peas would seem to be especially popular.

Anton C. Zvolanek of Bound Brook, N. J., has been calling upon his friends

in the trade this week, having just returned from a six weeks' trip to the Pacific Coast. His information regarding the outlook for the California Sweet Pea crop, just planted, was of especial interest.

Vaughan's Seed Store has a most attractive window display this week—a neat arrangement of Peas, Beans and Sweet Corn in open bags, together with an assortment of illustrated seed packets.

Burnett Bros., who were among the first to distribute their seed catalogs this season, report orders as ahead of last year at this date; and especially is trade very active with the large private estates.

Several of our seedsmen have this week received advices from their French correspondents that as a rule the whole line of French bulbs will be considerably

higher in price than for several seasons.

The Aphine Manufacturing Co. are very much pleased with the large sales of their insecticide that are being made by seedsmen. The public demonstrations that this company are giving are certainly doing much to popularize Aphine.

LINCOLN, NEE.—Mail order business is opening up very fine with us. In the wholesale department our travellers are finding extra good business all over the West. There is a heavy demand for Alfalfa, Clover and Timothy seed, especially Alfalfa. All orders on garden seeds are coming in very good. Our weather has been so stormy and cold that it has been impossible for farmers to come to town; this makes some of our contract deliveries late.

New Root Crops for the South

The Department of Agriculture has just issued a bulletin dealing with the "Yantias, taros, and dasheens as promising root crops for the South." These are tropical plants which can easily be grown in many parts of the South. They ought to prove valuable in many sections because they can be grown on lands too wet for other root crops or any cereal crop except rice. These plants comprise salad plants, tubers which are excellent for table use and also for stock feed, roots which are valuable sources of starch and from which alcohol can be made. They have formed the staple food of the native Hawaiians, and are important food crops in Japan, China, the Malay Archipelago, Porto Rico, and many other hot countries. The work of the Department with these plants has not yet progressed far enough to permit any distribution of plants.

Seed Trade the Country Over

STURGEON BAY, WIS.—The Northern Wisconsin Seed Co. has been incorporated, with a capital of \$25,000.

PORTLAND, ME.—E. J. Harmon & Co. have been incorporated to produce and deal in seeds, bulbs, plants, etc. Capital \$10,000.

BOSTON, MASS.—Robert Montgomery, son of the well-known rosarian, lately with the Fiske Seed Co., is now employed by Joseph Breck & Sons, representing their house among the florists in New England.

NASHVILLE, TENN.—A new concern, the Ewing Seed Co., has started in the seed business at 309 Second ave. N. W. B. Ewing, the head of the company, was formerly manager for the Woods-Stubbs Co.

ST. LOUIS, MO.—The Schisler Seed Co. has been incorporated with a capital stock of \$20,000. The incorporators are C. Wm. Koenig, Arthur W. and Jacob Schisler, Edward N. Kaercher and Wm. C. Essmuller.

PETERSBURG, VA.—The Grossman Seed & Supply Co. has been incorporated, with a maximum capital of \$50,000, and a minimum of \$10,000. C. F. Grossman is president, G. C. Burgess, vice-president, and W. S. Ivey, secretary and treasurer.

FREDONIA, N. Y.—A decision against Herman J. Westwood of Fredonia, was returned Jan. 21, by Justice Marcus. The man sued Harlow L. Crissy and Elton A. Cole for a share in the profits in a Federal seed contract. The case has been in the courts for some time.

TACOMA, WASH.—Articles of incorporation of Poole's Seed & Implement Co. of Tacoma have been filed in the county auditor's office by F. S., F. L., C. A. and C. L. Pole, who are the incorporators and trustees. The new corporation is capitalized for \$25,000, in shares of \$100, and the stated purposes are to conduct a general mercantile seed, farming implement and vehicle business.

ATLANTA, GA.—The State Court of Appeals holds, in a decision handed down recently in the case of Zipperer vs. Doyle, from the city court of Savannah, the law requiring registration of all fertilizer brands sold in Georgia is not applicable to a broker who handles fertilizers that are the output of a manufacturer who has already complied with the law. M. E. Zipperer bought fertilizers from J. A. Doyle, who sold goods of the Virginia-Carolina Chemical Co., which company had already filed its analysis and reports with the commissioner of agriculture.

Los Angeles

Charles Winsel has now acquired a lease on all the vacant land on Washington st. between Figueroa and Lovelace sts., which will give him room, for a time at least, for his rapidly growing business. The idea which seems to occupy the minds of some men in this country that the rich are growing richer and the poor poorer is proved to be an error by the history of this man, who came from Holland without money but a few years ago. He had three valuable assets: industry, integrity and good judgment, and the result of his labors is one of the best seed houses on this coast. A comparatively young man, he is sure to be heard from in the future.

F. E.—Best Advertising Medium

Government Publications Misquoted

The Department of Agriculture has recently been informed that certain of its publications dealing with Eucalyptus have been misquoted by several companies interested in selling lands. For instance, Circular 97, of the Forest Service, has been misrepresented as saying that California will in a few years be the only source of hardwood supply in the United States. Such a statement has never been made in any of the Forest Service publications and is not considered a fact. The Department experts believe that there is promise of considerable success in the cultivation of Eucalyptus trees in many parts of California, but estimates of profit and of growth have been attributed to the Department which are unauthorized. There are many uncertainties connected with Eucalyptus culture, the Government experts say, which the investor should take into account. Secretary Wilson says he does not intend to allow the name of his department to be used as a means of victimizing the public, and that in future any concern which attributes to the Forest Service unauthorized statements may expect the statements to be publicly disavowed.

A Sweet Pea Society for Scotland

Invitations are out to Sweet Pea enthusiasts to form a special Sweet Pea Society for Scotland, not in opposition to the National Society, but in order to specially cater for the interests of Northern growers. The preliminary circular is signed by Mr. Cuthbertson, Mr. J. Grieve, Mr. Malcolm and others, so that a successful start is almost certain. It is suggested that a show be held annually in Edinburgh, in August.

Beautiful! Novel! Valuable!

The Newest Lilacs

Double and Single
 Extraordinary Offering

The improvement in the Lilac, especially in the double sorts, is marvelous, and all lovers of this flower will be delighted with these novelties. In size, form and color they far surpass the old favorites and we confidently recommend them to our patrons. Nothing that has been introduced recently is likely to prove so popular as the new Lilacs.

A beautiful illustrated booklet on Lilacs will be mailed on request, also our Illustrated General Catalogue, which contains accurate and trustworthy descriptions of the best

AMERICAN ASSOCIATION OF NURSEYRYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-president; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer.

FORT WAYNE, IND.—The tree and shrubbery nursery maintained on a small scale in Lawton Park by the board of park commissioners is to be enlarged and extended.

BLACKSBURG, VA.—The Virginia Wholesale Nurseries has been incorporated with J. H. Broce, president; M. F. Slusser, secretary, and treasurer, W. O. Frith, all of Blacksburg.

MARYSVILLE, CAL.—The well-known gardens of the late Mrs. Mary Karr in this city are to be converted into a florist's nursery by a Mr. Evans, who recently established the first florist's stand in Marysville. A greenhouse is to be erected on the place and other improvement made.

Pussy Willows This is the season when shoots of the Forsythia, Cornus Mas, Jasminum and other flowering shrubs are cut and brought into heat, placed in jars of water, in order to enjoy soon thereafter their beautiful flowers. Though the flowers of many of them are small they are usually clustered abundantly along the shoots, hence are really beautiful when expanded as, indeed, are all the early flowers of Spring. Anyone possessing but a single shrub of any of these named can enjoy the flowers in the way suggested, as it takes but a few sprigs to give some flowers at least.

The Pussy Willow, *Salix caprea*, is not generally forced until the Easter season is at hand, as it seems from long use to be a part of that festival season, but there is no reason why the flowers should not be enjoyed before; and when cutting some shoots from the others mentioned, cut some from the "pussies" as well. Although the *S. caprea* is the one that is known far and wide as the Pussy Willow there are others very pretty in the way it is; i. e., in the way of displaying its staminate catkins. An especially vigorous one is *Salix Medernii*, its catkins, in fact its whole growth, surpassing in vigor the *caprea*; this extra vigor, is no advantage, some florists think, as the shoots are stronger than the use of them indoors demands; but he this as it may, in jars of water on a table the shoots of these, well laden with expanded flowers, are pleasing to everyone.

Those who have forced such shoots as those mentioned have found no need of placing them on a table in a living room at once. For a week or so they may be placed in a warm cellar, by which time the buds will be swelling. Brought up to light and heat then, the flowers expand quickly.

Some nurserymen as well as florists grow Willows especially for their shoots for forcing. The plants are best set in a piece of low ground, where depth and moisture exist. The whole of the tops are cut off annually, whether wanted or not, in order that new shoots may form for the next season, as it is these young ones that give the pussies.

A Good Pink Spiraea

It is nice to find some old shrubs as good as new ones; and in the case of *Spiraea Billardii* it is certainly the case. This is the *Spiraea* bearing finger-like spikes of pink flowers, the first blooms of which expand in May. It has been in cultivation here at least for half a century, and if one looks through a collection of *Spiraeas* today in which *Billardii* is present, it will be strange if it is not picked out as one of the best of its class. There are several types among the *Spiraeas* in the form of their flower heads. The *Billardii* represents those of finger-like spikes, then there are some perfectly flat, others with slightly rounded heads, and forms intermediate between all these. There are some species with perhaps rather longer spikes than *Billardii*, but there is to be said in favor of *Billardii* that it is almost everblooming. When one is possessed of two or more bushes of it and these are growing in deep, moist ground, there is hardly a day throughout the season that a flower could not be found on them. There is first the full crop in May, after which scattered flowers appear until Autumn when quite a crop may be looked for, especially if the season is propitious for the growth of the shrubs. It is from the strong new shoots that the flowers come; and this has led some to cut back the bush pretty freely after its May flowering, to promote a lot of young shoots for Autumn.

Flowers of the Chionanthus

The White Fringe, *Chionanthus Virginica*, is of a nature that every bush does not bear fertile flowers. Some bushes may have female flowers, others male. As the large clusters of berries which follow the blossoms of the fertile flowers are very handsome, looking like huge bunches of Grapes, it is disappointing to those looking for them, especially as many purchase a bush in order to secure berries, and their bush proves a sterile one. There is no way to get the kind desired unless by selecting one that has already flowered, as there is no means of distinguishing the varieties by the foliage or any other way. Europeans raise these plants by grafting them on the common Ash, which makes a good stock; and these grafted plants make a growth far superior to a seedling in the first few years; in fact, they are fit to sell to nurserymen after a season's growth, while a seedling would be but a few inches high. Grafted plants, too, would insure the possession of the berry bearing ones for sure; and to advertise one's stock as of this nature would be a taking card for any one. There is this much to be said for those who have the sterile one, its flowers are handsomer than those of the other, the flowers being larger, making the cluster much more conspicuous than that of the other.

Abies Concolor, Cal.

Japanese Maples for Easter

The idea of forcing Japanese Maples for Easter, as suggested in the advertisement of H. A. Dreer, is a very good one. These plants are so beautiful when in the first expansion of their foliage in Spring that every one is pleased with them, and, undoubtedly, were they to be had in pots at the Easter season those who had them for sale would find them a good selling article. Nurserymen tell us that every Spring when plants of these that are on lawns display their handsome foliage, there is always more or less demand for them, which has led to the growing of them in pots in order to supply these late orders. If these pot plants are forced, as the Dreer firm suggests, there would be obtainable for Easter decoration something quite distinct from the ordinary run of plants now used, in addition to having hardy subjects, which could be planted out for permanent growth, were it so desired. These Japanese Maples delight in the full sunlight, in order to display their brightest colors, but when outdoors the heat, and often lack of moisture in the air, causes "sunburn" as it is called, to the leaves. In all probability this would not occur were the plants in a greenhouse, for there there would be moisture with the heat, giving, it is believed, just what these Maples require for perfection to their foliage.

The three kinds Dreer's mention, polymorphum atropurpureum, dissectum atropurpureum and Japonicum aureum are good; the two former the writer has found to make the best display in Spring, while Japonicum aureum is often even better in late Summer than it is earlier in the season.

Another fine purple-leaved one is pianatifolium atropurpureum, but without doubt the best of all the blood-leaved sorts is the polymorphum atropurpureum.

Varieties of English Walnuts

The great interest displayed in the cultivation of nut trees nowadays leads to the thought that among the very many kinds popular in our markets the English Walnut, as it is called, *Juglans regia*, occupies a very high position. The excellence of its kernel and comparative thinness of shell gives it this position. On the Pacific Coast, where this tree thrives so well, the orchards are largely of improved kinds; sorts with thin shells and large nuts are preferred by everyone; and these sorts are worth much more than seedlings. Although seedlings and all have comparatively thin shells, having in mind all other nut trees, yet some of the seedling English Walnuts have quite thick shells, as will be found when buying a mixed lot from stores.

Many years ago, the nurserymen of France sent out an early fruiting one with a fairly thin shell, which was called *preparturiens*. This was planted in Pennsylvania as well as other places, but Pennsylvania is a little too far north to have the best results from this Walnut. Besides this early fruiting variety, there are some half-dozen others of much merit which are planted in orchards.

Abies concolor (California)

The "Silver Fir" of Colorado is now well known in collections of evergreens, but not every collection has in it the Silver Fir of California, though it is the longer known one of the two. The evergreens of California were known both in our eastern States and in Europe many years before those from the Colorado section came into notice, but after the latter became known they at once were the most popular because, coming from a more vigorous climate, they proved well adapted to the horticultural gardens of the world.

Those acquainted with the Silver Fir of Colorado will notice at once a great likeness between it and our picture of the California one. Still, while at once pronouncing it a concolor, to the writer it seems of less flattened foliage, the growth is more vigorous and of less horizontal outline while the tree itself is far more bushy than concolor (Colorado), is usually seen.

Many of these evergreens will probably be changed specifically in times to come, just as many now are, of which forms are found according to altitude, and which forms seem of a permanent nature. This very one, concolor of California, becomes lasiocarpa when higher up the mountains, and when still higher subalpina.

In collections we want all the species or forms, but from what has been said it appears that our specimen concolor should be superseded by lasiocarpa for elevated sites, the concolor preferring lower ground.

Fragrant Magnolias

In those portions of our country where severe Winters are unknown Spring planting will soon commence, and among trees and shrubs that will surely be called for are the various varieties of the Magnolia. It is not every kind of Magnolia that is sweet scented, though some writers speak of the whole family as being so. The majority are not. Their great beauty is claim enough for them to attention, as all good things cannot be expected from any one object. Nevertheless, there are a few sweet-scented ones among which *M. glauca*, known as the Swamp Magnolia, because of being found usually in low ground, is renowned for its fragrance. So sweet and powerful is its perfume that passengers on trains passing through sections where they grow wild are often regaled with their fragrance, wafted in the car windows.

The next approaching it in sweet perfume is the dwarf growing one, *M. stellata*, its fragrance being one of many other attractions it possesses. The older one, and the parent of many of the varieties in cultivation, is *M. conspicua*, the Chinese White, as it is called. It is modestly fragrant, hardly sufficiently so as to be called sweet-scented. *M. glauca*, the first mentioned, is almost an evergreen in the warmer States, and perhaps is entirely so when in well sheltered positions in the South, as even in the Middle States if snow covers them well all Winter, beginning before the leaves fall in late Autumn the covered leaves will be found fresh and green when Spring comes. It must be said of this species, too, that though a native of low ground, it does not demand a similar situation when transplanted but will thrive almost anywhere. Further, it does not flower all at once as is the rule with nearly all others, but continues to give flowers in succession for a month or two.

M. stellata is one of the most valuable of Magnolias. Of a dwarf, bushy nature it flowers profusely and early in the season, being the first one to expand its flowers in Spring. These flowers are white when open, with a very faint tinge of pink; they are semi-double, and one almost always crowns the end of every shoot or twig no matter how tiny the twig may be. This species is one of a few others not unattractive in late Autumn, its leaves changing then to a purplish brown color.

M. conspicua was the first of all foreign species to be introduced to our gardens; everyone knows of it as a choice large shrub, sometimes of tree size, flowering very early in Spring, sometimes too early, as late frosts often scorch its flowers. Its large, pure white blossoms are a great adornment to a garden.

California Privet

California Privet is still the leading hedge plant, because nothing has yet been produced to surpass it.

I have an extra large stock of two-year-old plants, in all grades, to offer for Spring shipment. This stock is well branched with plenty of fibrous roots.

I can compete in price, quantity and quality with any reliable grower.

Golden Wedding

These are sufficiently rare to be well worth chronicling. Last week was celebrated that of Mary Vollman and Henry Behrens, florist, of Middletown, Ohio, who were married Feb. 5, 1800. Heartly congratulations from The Florists' Exchange, sir and madam.

Thompsonville, Conn.

The Brainard Floral and Nursery Co. have two ranges, one on Maple st., which is now being increased to 6000 ft. by an addition of 4000 ft. of new construction. This will be ready for use about March 1. Their Garden st. place has some 10,000 ft. devoted to mixed stock and Carnations, and is known as the cut flower department. Most of the stock raised is sold on the place at retail, but their wholesale trade is also very good. The seed department has increased so much in the past few years that they are now importing both seeds and bulbs, and the seed trade hereafter will be one of the most important branches. Thompsonville, Conn., is about nine miles from Springfield, Mass., and the Brainard Co. have some choice territory from which to look for trade.

Cincinnati

There has been no change in the market as regards stock since our last communication. Everything is scarce and prices are still remaining firm.

Myer Heller of Heller Bros. passed through Cincinnati Saturday morning last on his way to New Castle, after a very delightful and profitable rest at Palm Beach, Fla. He reports having called upon Mr. Ohmer, states that he is nicely situated, and it won't be long before he will be shipping the product of his little place to the northern markets; he says that Ohmer's Asparagus is doing finely.

The Dutchmen are pursuing their pilgrimage through the U. S.; one in question is Mr. L. Vandemey, who states that it is not so easy to sell stock as it used to be a few years ago, which I believe to be a fact. For, like every other business, when one individual sees another getting along nicely and making three square meals a day, he immediately starts in and sees if he can't get four, and this applies to the Dutch bulb merchants of Holland.

Bulbous stock has not been an oversupply this year owing to the fact that the bulb merchants here, George & Allan, have not grown more than one-third their usual capacity as their sad experience two years ago was enough for them.

The Grand Rapids Greenhouse Co. is shipping to this market carload after carload of Lettuce; they control the output of the large Lettuce growing plants around Grand Rapids. Mr. Peary, who looks after the selling of the stock, is a very pleasant gentleman who has the peculiar faculty of making you buy whether you want to or not.

Cincinnati is generally known as the head market for Lettuce in the U. S., selling more than one-half of the Lettuce produced.

Next year the Grand Rapids Greenhouse Co. will go more extensively into the flower business, growing American Beauty Roses, white and pink Killarney and Carnations. Mr. Peary tells the writer that Mr. Stover, their grower, has just returned from a trip to the larger growers throughout the East, taking in all of the larger cities, and he is now preparing to show the company that cut flowers will pay them better than vegetables.

Inquiries are beginning to arrive for red stock of any kind for Valentine's Day. Growers who have more red Carnations and red Roses than they know what to do with can ship them to the writer for that day's sales.

The Cincinnati Florists' Society held a special meeting at the Sinton Hotel, Feb. 7, for the purpose of revising the By-Laws, the principal object being to change the meeting from Saturday to some other night during the week.

Wm. Sunderbruch now has a force of men at work at Brookhurst, the old Partridge plant; this has been formed into a stock company with Mr. Sunderbruch at the head as manager and grower, and it is hoped to make a success of this place under his management.

The Walnut Hills Floral Bazaar had a swell wedding decoration at Alms Hotel, Feb. 5, the occasion being the wedding of City Solicitor Ballard to Miss McCracken; about 500 guests were present. This same firm had a decoration Feb. 7 at the St. Nicholas Hotel for another swell occasion. E. G. GILLET.

THE AMERICAN CARNATION

Price, \$2.50

A. T. DE LA MARE PTO. & PUB. CO. LTD

NEW CARNATIONS

The two prize winning introductions of the Cottage Gardens.

MRS. C. W. WARD

MRS. C. W. WARD is a perfectly formed flower with full center; color deep pink several shades lighter than Lawson, deeper than Winsor; having strong, erect stems 24 to 36 inches in length. A vigorous, healthy grower and has never shown disease of any kind.

AWARDS

Society of American Florists, Silver Medal, Boston, 1906; The Craig Cup for Best Seedling, Philadelphia, 1906; The Lawson Bronze Medal, Washington, 1908; The Horticultural Society of New York Silver Medal, Sweepstake prize for best 100 blooms, New York, 1909; The Horticultural Society of New York Diploma, for best new variety, New York, 1909.

PRICES FOR ROOTED CUTTINGS

\$2.00 per 12, \$12.00 per 100, \$100.00 per 1000. 25 at the 100 rate, 250 at the 1000 rate.

Delivery February 20th

ALMA WARD

This beautiful Carnation is pure white except during dark weather when it shows delicate splashes of pink similar to the Cattleya Orchid, increasing its popularity.

ALMA WARD is the largest and most fragrant Carnation ever grown, producing perfect flowers $3\frac{1}{2}$ to $4\frac{1}{2}$ inches in diameter on strong, erect stems 30 to 42 inches in length.

AWARDS

The Lawson Silver Medal, Toronto, 1907, (No Gold Medal having been awarded); The Lawson Gold Medal, Washington, 1908; The Society of American Florists' Silver Medal, Washington, 1908.

PRICES OF ROOTED CUTTINGS

\$3.00 per 12, \$5.00 per 25, \$9.00 per 50, \$15.00 per 100, \$35.00 per 250, \$65.00 per 500, \$120.00 per 1000.

Delivery March 1st

These varieties bring from \$2.00 to \$4.00 per 100 more than any other Carnation sold in the New York market.

THE AMERICAN CARNATION

Price, \$3.50 per 100
Send for Sample Pages

A. T. DE LA MARE PRINTING & PUBLISHING CO. Ltd. 2 to 8 Duane Street, New York

Washington, D. C.

The depressed conditions of last week have somewhat improved, but business on the whole is rather quiet for this time of the year with the possible exception of a good deal of funeral work occasioned by an invasion of gripple.

By far the coldest night of the Winter was experienced February 5, with high wind, and the work of adequately heating the various local growing ranges was a proposition out of the usual order of affairs.

J. L. C.

Baltimore

We are just passing out of the clutches of the severe cold snap that has been with us for the past few days; in some instances the trade was handicapped, being unable to handle cut blooms on the city markets.

Society has been in full blast and, from all reports, the trade has had its share, the several functions calling for many up-to-date decorations and an abundance of plants and choice cut flowers has been called for.

Lent is now at hand and the season will naturally be dull with the exception of the funeral work.

This season the trade accepts conditions with but little complaint, and the Easter season is looked for this year with the prospects of a record breaker as business has been in most cases exceedingly good.

Roses are a little more plentiful, coming in slowly, while Carnations are beginning to get scarce, however the crop is holding up well. Callas are slowly coming in, while all kinds of bulbous stock is plentiful and almost any amount can be had. Smilax and Asparagus are enough to meet the demand. Laurel is a little scarce yet on account of the snow which is still on the ground but the prospects are that in a few days it will all be gone.

Philip Buckingham of Woodbrook, Md., who has entire charge of C. R. Diferderfer's range of houses, has them in tiptop shape, excepting one house of Enchantress Carnations which are splitting.

Harry Biggs of Mt. Washington, Md., has taken charge of G. G. Skinner's range of houses.

W. Price of Govans, Md., has a beautiful house of Bride, Bridesmaid and Richmond Roses with stems about six feet long.

Harry Biggs of Mt. Washington has again taken charge of the country home of H. G. Skinner, and has his range of greenhouses in fine condition; he has a yellow Calla in bloom that attracts considerable attention.

E. Holden of Catonsville, Md., who makes a specialty of growing vegetables under glass reports his Tomato crop and Mushrooms a success. In Mushrooms Lollards, Frogmore and Comet are the varieties he grows, and he averages 20c. to 30c. a pound. This crop is about exhausted and he will grow Radishes and Lettuce. He also built a new Mushroom house last Summer, 30x100 ft.

The old establishment of H. Wiedey, York road, for many years in the florist's business, is now selling oysters; their houses have gone to pieces and they never rebuilt.

Peter Graber, Stn. D, is growing an extra fine lot of Amaryllis, Johnsoni and Formosissima varieties, also Carnations.

Arthur Finley of Arbutus, who has gone into Carnations reports his crop in good condition, cutting 400 a week out of one house, 35x100 ft., and will grow Scarlet Sage on a large scale.

Albert Fiedler & Co., 902 S. Charles st., is sending out to his trade a beautiful calendar showing Autumn days; it is very attractive and a sketch from an original oil painting by Edwin Landseer. Mr. Fiedler is one of the most energetic young men in the retail business, and has a host of friends. Success has met him on every turn he has made, and his attractive store, with large French plate windows are always decorated to fit the season of the year. A short time ago he built a large range on the Belair road; he uses all the stock grown there and also buys heavily at the Exchange.

John Cook, N. Charles st., is carrying very attractive widow displays of various kinds of Spring flowers which catch the eye.

The stalls in the market look as though Spring was here again, Sweet Peas, Pansies, Tulips, Azaleas and Primroses are to be seen and are selling satisfactorily.

J. L. T.

Carnation Dorothy Gordon at Pittsburg

You must have seen and admired our Carnation Dorothy Gordon at the Pittsburg meeting, if you were there; our exhibits of this superb new variety attracted a vast amount of attention and caused much favorable comment from the hundreds of visitors who saw it. If you missed the show, just notice the very flattering mention that "Dorothy Gordon" received in the reports appearing in your trade publications of last week.

Our exhibit of 100 "Dorothy Gordon" in Section "A" won Second Prize; but more than any award we value the opportunity that many more of our friends had at that meeting for seeing this worthy new variety and passing on its merits at first hand.

Joseph Heacock Company, Disseminators, Wyncote, Pennsylvania

Please mention the Exchange when writing.

We have already sold more than 100,000 rooted cuttings this season and the limit of our growing capacity has nearly been reached. If planning to feature "Dorothy Gordon" this year, you should get in your order at once. Not much time is left, anyway—so write us NOW if you want any stock this Spring. Don't delay! Prices remain as previously quoted:

\$10.00 per 100, \$75.00 per 1000.

Come and see it if you can, or write us for literature and full particulars—free. We'll gladly answer your question.

President, J. J. Perry; Secretary, N. F.

Plittion; Treasurer, F. G. Burger. Meets second and fourth Mondays of each month at Florists' Exchange Hall, Franklin and St. Paul sts. Annual election of officers second Monday in March.

Gardeners and Florists' Club of Boston.
President, John W. Duncan; Vice-president, Peter M. Miller; Secretary, Wm. N. Craig; Treasurer, Edward Hatch. Meets third Tuesday of each month at Horticultural Hall. Annual election of officers in December.

Los Angeles Florists' Club.
President, Otto Heutschy; Vice-President, James McGillivray; Secretary, Angus McLeod; Treasurer, Wm. Niel Campbell. Meets first and third Friday of each month in the Board of Trade Rooms. Annual election of officers in January.

Minnesota State Florists' Association.
President, Theo. Wirth; Vice-president, Aug. S. Swanson; Secretary, J. P. Jorgenson; Treasurer, E. Nagel. Meets third Tuesday of each month at 510 Snelling ave., St. Paul. Annual election of officers in September.

New York Florists' Club.
President, Abraham L. Miller; Vice-president, Joseph A. Manda; Secretary, John Young; Treasurer, W. C. Rickards, Jr. Meets second Monday of each month in the Grand Opera House bldg., 23d st. and Eighth ave. Annual election of officers in December.

Pasadena Gardeners' Association.
President, Otto Heutschy; Vice-president, James McGillivray; Secretary, Angus McLeod; Assistant Secretary, G. W. Johnson; Treasurer, Wm. Hutchison. Meets first and third Fridays of each month. Annual election of officers in January.

Philadelphia Florists' Club.
President, Jos. Heacock; Vice-president, Alfred Burton; Secretary, David Rust; Treasurer, Geo. Craig. Meets first Tuesday of each month in Horticultural Hall. Annual election of officers in December.

Pittsburg Florists and Gardeners' Club.
President, F. Burki; Vice-president, P. Randolph; Secretary, H. P. Joslin; Treasurer, H. L. Blind; Executive Committee, E. C. Reineman, J. Wyland, J. Bader. Meets first Tuesday of each month at the Fort Pitt Hotel. Annual election of officers in February.

St. Louis Florists' Club.
President, Geo. B. Windler; Vice-president, John Cannon; Secretary, J. J. Beneke; Treasurer, Wm. C. Smith; Trustees, A. J. Bentzen, H. C. Ostertag, Chas. E. Schoenle. Meets second Thursday of each month at Hall No. 2, Odd Fellows' Building. Annual election of officers in August.

Scranton Florists' Club.
President, D. W. Evans; Vice-president, B. E. Cokely; Secretary, T. B. McClintock; Treasurer, Wm. McDonald. Meets first Friday of each month in Rank's Hall. Annual election of officers in October.

State Florists' Association of Illinois.
President, C. E. Gullett of Lincoln; Vice-president, G. B. Franks of Champaign; Secretary, J. F. Ammann, of Edwardsville; Treasurer, Frank C. Washburn of Bloomington. Next annual convention at Urbana, Ill. Annual election of officers in February.

State Florists' Association of Indiana.
President, J. S. Stuart; Vice-president, Herman Jange; Secretary, A. F. J. Baur; Treasurer, Homer Wiegand. Meets first Tuesday of each month in State House. Annual election of officers in January.

Utica Florists' Club.
President, F. J. Baker; Vice-president, Seward Hakes; Secretary, J. C. Spencer; Treasurer, C. F. Seltzer. Meets first Thursday of each month in Genesee Hall, Oneida Square. Annual election of officers in May.

Washington Florists' Club.
President, F. H. Kramer; Vice-president, John Robertson; Secretary, O. A. C. Oehmler; Treasurer, Wm. F. Gude. Meets first Tuesday of each month, usually at Gude's Hall, 1214 F st., N. W. Annual election of officers in March.

MARY TOLMAN

Winner of First Prize at Milwaukee. Deep flesh pink, the most beautiful color of any in this class. Does not fade in the strongest light. An excellent, clean, upright grower long, stiff stems and perfectly formed flowers. Will produce more perfect blooms in a season than Enchantress. We want your order for this excellent Carnation. Orders booked now for January, 1910, delivery.

\$12.00 per 100, \$100.00 per 1000

A. E. Hunt & Co.
EVANSTON, ILL.

Chicago Carnation Co.
JOLIET, ILL.

Hunt Bros.
PARK RIDGE, ILL.

Please mention the Exchange when writing.

CONQUEST

Light pink overlaid with deep rose. The most valuable and fancy Carnation on the market.

Winner of First Prize Wherever Shown

Habit of Lawson; very free; stem long as Enchantress and stiff; the flowers are large and well formed, making a good impression wherever shown, and can be used to good advantage in many different ways.

Chicago Carnation Co.
A. T. Pyfer, Mgr., JOLIET, ILL.

Please mention the Exchange when writing.

SANGAMO

Brilliant glistening pink, brighter than Winsor or Winona

WINNER AT CHICAGO, ST. LOUIS AND MILWAUKEE FLOWER SHOW!

Perfectly formed flowers on long, stiff stems; calyx does not split. The most PROFILIC Carnation grown to-day. Everybody pronounces it the best "bread-and-butter" Carnation they have ever seen growing.

ROOTED CUTTINGS, ready Jan. 1st., \$12.00 per 100, \$100.00 per 1000.

Parasitic Plants on Rhododendrons

Editor The Florists' Exchange:

Referring to the discussion on the above subject, page 164, issue Jan. 29:

Mr. Pedersen's article should stop any one worrying so far as parasites are concerned.

What is of more vital interest to lovers of these beautiful shrubs is what Mr. MacLellan says in regard to their being injured through allowing the ball of newly planted stock to dry out. While there is less danger from this source when they are planted in shade and naturally moist places, it is great in exposed, high and dry places. Again, the same danger is likely to occur through improperly planting collected plants with strong woody roots, as a cavity is apt to form under the mass of fibrous roots, allowing water to soak freely from them and air ingress to dry them.

Once let the ball of roots of any plant get thoroughly dry after planting in new or loose ground and it is next to impossible to soak it through in dry weather without perforating it.

The Rhododendron will grow in most soils providing that soil is naturally moist, but in good deep rich loam it revels. To emphasize the necessity of moisture for these plants I will mention one near by, as fine a specimen as one could wish, measuring some 12 ft. high and rather more in diameter, with branches sweeping the ground and every year covered with grand bloom; it is planted on low ground a few feet above high water (tide) and close to a small stream. On this place I have a number planted in sandy soil; although I dug out a cartload of sand and filled in good loamy compost to each plant, and mulch every Fall, yet a week's drought will dry them up. During a dry spell I soak them every day with water free from lime, and they merely exist. I attribute this to the sandy subsoil which permits of quick leaching and evaporation.

Oyster Bay, N. Y.

ALFRED H. WALKER.

Dahlia Lists

Editor The Florists' Exchange:

The several articles appearing in recent issues of the EXCHANGE, relative to shortening the Dahlia lists, have been of unusual interest to the Dahlia growers. I venture to say there is not one among the fraternity but at heart wishes that his list could be cut at least one-half. This would leave him free to study and better acquaint himself with the remaining half. The question is not a new one but has appeared from time to time, and in various forms in the Dahlia literature of the past years.

Mr. Vincent, who started the present discussion in the issue of Dec. 11, states the question very fairly, and the well-nigh hopeless task of deciding upon the victims for the headsmen's axe has been felt by other growers time and again.

Still, it is plainly evident that the axe must fall and fall many times. That a list could be prepared that would be satisfactory to all I believe to be improbable if not impossible, for the reason that many varieties good in one locality are worthless in another. This is not characteristic of the Dahlia only but is true of fruits, Potatoes, Corn, and an endless variety of plants.

We must not lose sight of the fact that this is a very large country in which we have practically all the climates of the world with a few variations thrown in. So it is not to be wondered at that some varieties of Dahlias should act very differently in one locality from what they do three thousand miles away and under a very different climate.

As to the question "Who will reduce the list?" I think this is easier to answer than the one that would naturally follow, namely, "How can we get concerted action among the growers?"

From one point of view it would seem that a free discussion of varieties discarded, or to be discarded, would be the proper move. But from another point of view this would be very disastrous and almost sure to lead to personal feelings. The season of 1910 is upon us and it would be manifestly unjust to dealers to open up a systematic "knocking" on the stock they offer for sale.

In my time I have grown some 1200 to 1500 named varieties, and have done more or less "reducing" all along and, for several years back, have tried to keep my list to about the 150 mark, taking on a few each year

and discarding a like number. I do not claim of course that the 150 embraces all the good varieties, for it does not. If it will be of service to other growers I will say that I have worked along three general lines in reducing the list, and these lines can be worked by others with perfect safety.

First, To hold to those varieties which give general satisfaction in widely separate localities and are found reliable even in unfavorable seasons. These, of course, should be of good colors and good habits. There are many varieties which meet all these requirements.

Second, To cut out varieties as far as circumstances will permit which do well only in special locations and favorable seasons; also varieties that are poor in color, stem and habit.

Third, To cut out varieties where the root formation is such as to render the variety unprofitable by reason of a tendency to disease or ill-formed roots, that is roots with weakly necks or of bad keeping qualities; others again make roots so small that they are unsalable.

A grower moving along these lines will be surprised to see how many varieties can be discarded and at the same time will improve the general worth of his list.

As stated previously these are but general lines and, of course, can be modified as occasion requires. A variety that stands alone by reason of form, color or size, even though faulty in some respects, is nevertheless entitled to be grown until another of the same class but less faulty comes to take its place.

The new England Dahlia Society has had the question of "Reliable Dealers" under discussion for some time past, and in a recent issue of the EXCHANGE Mr. Bassett raises the question of "Mixtures." From all of these questions good should result.

One statement, however, in Mr. Bassett's article, I think, needs some further explanation or a wrong impression may be given. In discussing the matter of dividing, he says: "Divided roots are not worth more than one-third as much as undivided stock." The correctness of this statement is dependent to some extent on the variety but far more upon the handling the stock

An Advertising Post Card Designed by A. B. Reynolds, Ballston Spa, N. Y., Grower of Bedding and Vegetable Plants

has received. Some undivided stock may be worth five times as much as divisions, and in other instances five whole clumps may not be worth as much as one division. If stock has been dug and thrown from place to place carelessly every tuber may be broken at the neck and the purchaser pays expressage for worthless stock. A division if made by competent hands means one or more tubers in perfect condition with all mangled tubers removed. I think, however, I understand Mr. Bassett's position. He is speaking of values under normal conditions. Taking this view his statement is substantially correct, only I think his relative values a little high; I would say about one-half instead of one-third.

Denver, Colo.

W. W. WILMORE.

Dahlias—Reducing the List

Editor The Florists' Exchange:

Mr. Peacock has left little to be said on this point, and the main point he makes—that each grower and dealer must make his own list—hits the case exactly. There is one thing that must be taken into account, which is that the Dahlia business has overgrown the capacity of any one individual or firm, and no one, however well he understands the business, or how well he be prepared for it, can expect to cover the whole ground. In a very interesting letter I received recently from an enthusiastic young Dahlia specialist he said he would add 300 varieties to the 1200 he already has.

My experience with some of those recommended by Mr. Vincent and Mr. Peacock does not quite coincide with theirs, and they have also omitted some of those which I consider among the very best. A year ago I secured a half-dozen roots of Virginia Maule, which I

propagated and then secured some more plants in Spring, getting about 125 plants, which were all planted in one row. These were all direct from the introducer and all appeared to be good plants when set out. The land was a sandy loam in good condition and they were all cultivated well, and some watering done, but some of them refused to grow, while others became very strong and vigorous, and a few of the poorer specimens died outright. The balance of the small ones grew slowly and at blooming time the flowers were less than half size and somewhat higher colored than those on the strong plants, and I suspected they were an entirely different variety, but I was told that they were not and that this was a habit of the variety. Now, I do not feel quite sure that this is correct, but I am not trying to propagate my stock and will have the good ones all planted separately and see what happens next season. But, as some fifteen to twenty per cent. went bad, I think it rather poor encouragement to plant this variety until it is more reliable.

Mr. Vincent calls Mme. Van den Dael medium in size. I have always considered it very large. White Dandy is not pure white and is too small although it is a healthy grower and gives good long stems. His statement that the ideal white Cactus Dahlia is still missing may be considered substantially correct, but Pius X comes pretty close to it. I have tried Henry Patrick several times, and have gotten some nice blooms on very long stems, but more that had a hard green center and were wholly worthless. I have always regarded Perle d'Or as the very best white in any class, but for several years past there has been a tendency to come single and semi-double. I am trying to bring it up again by special treatment, but will only plant it moderately until I get into better shape.

Last year I tried Dreer's White; I pinched back and then disbudded and got a large crop with long stems, that sold at good prices. It somewhat resembles Grand Duke Alexis, but is wholly white, not quite so large nor quite so rampant in growth, but gives a very much larger crop and does not require nearly so much disbudding.

In single whites, White Century is the only one I have seen (except some of its seedlings that are nearly identical with it) that I consider worth growing. As compared with it, Rebecca Mayhew has a yellowish color, is much smaller and has not such good stems. And even though it did produce twice as many flowers it would require the double number to produce the same effect. It would have been fairly good before the advent of White Century, but I consider it a back number now.

In pink Decoratives, of course Mme. Van den Dael is needed; if Jeanne Charnet proves to have keeping qualities it will be fine, but in real solid pink Delice is so far ahead of all others that it has no competition, and it can be had early and late, too.

In yellows, I have been watching Princess Victoria for several years and fail to see in it any improvement over Queen Victoria. (The latter is Mary D. Hallock, renamed.) Yellow Duke is similar in form to Yellow le Colosse, but a little darker in color, not quite so flat in form, and has very much better stems; if pinched back to make as many stems as are wanted, and with a moderate disbudding, it gives a large crop on long stems and sells promptly at good prices.

In red Cactus, Standard Bearer as a garden variety is hard to beat, but it is very hard to get it with good stems. Roland von Berlin is a little darker, but has better stems and is a first-class variety. H. W. Sillem and Leuchtfelber, if properly grown, are about the best, both being large and bright red. But both need pinching enough to make as many stems near the ground as the number of blooms aimed for, and then all side branches should be kept down and thoroughly disbudded. In this way a good crop of extra good blooms can be had. Burbank is extra fine but needs similar treatment and more of it; after it gets where it looks all right to cut it will go on increasing in size for two or three days and still remain good.

Philadelphia and Boston markets, or rather New England markets, seem to call for different classes of Dahlias. Our Jack Rose, which has made such an unqualified success in the Middle States, got the cold shoulder generally in New England, and on the other hand, Ruth Forbes, which was sent out at \$5 per root and scored big honors in New England, does not raise any enthusiasm here. It was described as almost exactly the color of A. D. Livonia, but either that was a mistake or it has colored differently here, for it is not really pink at all. It is a fairly good variety, but the first blooms are small and imperfect and it is not a heavy yielder afterward. I had two plants of Elly Gumpert, a very beautiful Decorative sort of a pleasing mauve pink, large size, firm with long stems, and they gave as many first-class blooms as the twelve Ruth Forbes' I had; all who compared the two varieties gave the preference to Elly Gumpert.

One of our first-class horticultural magazines is advertising to appear in a future number, "All the New Dahlias Worth While." I shall watch for this article with a good deal of interest both for what it includes and what it omits. It strikes me (independently of its advertising policy) as a very broad proposition, and I much doubt if we have any Dahlia specialist who is anywhere near well enough posted to do the subject justice.

APHINE ON FERNS

Two Millions of Ferns Grown Annually

J. F. ANDERSON Fern Specialist

Five Hundred Varieties of Ferns in All Sizes

Aphine Mfg. Co., Madison, N. J.

SHORT HILLS, N. J., Jan. 31, 1910.

Gentlemen: Kindly ship me at once, by U. S. Ex., two gallons of Aphine. The last gallon received from you has been thoroughly tested, and proved to be a most effective exterminator of all such insects to which ferns are subjected. If your preparations are of uniform strength, a solution of one to fifteen will be safe on the most delicate ferns.

Yours respectfully, J. F. ANDERSON.

The Manufacturers of Aphine guarantee uniform product at all times, and, if directions are carefully followed, that it will do all we claim for it

A PUBLIC APHINE TEST

Will be held in PHILADELPHIA on SATURDAY, FEBRUARY 12th, 1910, (Lincoln's Birthday,) from two to five p. m., at the new seed store of HENRY F. MICHELL CO, 518 Market Street. You are cordially invited to be present and to submit any plants, shrubs, or stock that may be infested with insects or disease, so that we may demonstrate to you the wonderful merits of this new insecticide discovery—Aphine.

ISELL'S NEW EARLIBELL

The Coming Tomato FOR FORCING

Earlier than Earliana, smoother and better shape. Surprisingly productive. Color—beautiful deep scarlet all over. Table quality very fine. Vines medium heavy, very healthy.

Charles Campbell, Paw Paw, Mich., writes Jan. 2, '10:

"Last season, I planted 'Earlibell' with a strain of Earliana which I have re-selected for years, and Sunnybrook Special Strain of Earliana, under same conditions. Your Earlibell outdistanced both strains of Earliana in earliness by five days, also in yield, size and quality of fruits."

Prices, our own headquarters stock, by mail postpaid; Pkt. 10c; oz., 40c; 2 oz., 65c; 1/2 lb., \$1.00.

Isbell's Seed Annual and Wholesale Price List, free on request. Address orders to

S. M. ISELL & CO., Box 414 Jackson, Mich.

Please mention the Exchange when writing.

EXHIBITIONS

The following is a synopsis of the papers read before the Horticultural Society of Newport, Feb. 8, 1910.

Horticultural Exhibitions, Their Utility and Mission

BY JAMES ROBERTSON

There are scattered, all over the earth, varieties of plants which Nature has placed in the care of the horticultural craft. The occupation of caring for them is so varied that a great deal of knowledge is required by those in charge of any important branch of the work, knowledge which can only be gained by the association of workers, and for this reason horticultural societies are formed in all important horticultural centers, the usefulness of which is demonstrated to a great extent by the exhibitions given. These exhibitions are utilized for bringing together ideal samples of horticultural products in single and collective form. Landscape gardening can only be presented as a horticultural department in miniature or fragmentary form. There are things, however, that are not horticultural products really, but which should have place in the exhibitions when space permits; among them are gardening implements of newer or improved makes, samples of first-class fertilizers, planting plans, pictures of unusually good specimen plants, pictures of ideal flower or plant arrangements, sample copies of horticultural periodicals, gardening catalogs, and, in fact, anything that may contribute to results in horticulture. There should also be included a collection of plant enemies, such as scales, insects, moths and other pests. These pests should be arraigned before the craft at the exhibition, their crimes explained, their names, descriptions and habits recorded for future identification, and then sentenced by competent judges to penalties which should result in their extermination.

The first mission of an exhibition is to afford comparison of the relative merits of exhibits, to encourage the growing and arranging of horticultural products to the highest possible state of perfection, and to educate persons interested in the requirements of the times. All who can make worthy exhibits should be notified to take part, and prizes should be a special inducement as they help greatly to stimulate the efforts of an exhibitor; but irrespective of prizes, all who can exhibit unusually good examples should do so. The exhibitions provide an excellent opportunity for consulting as to plants, and seeing new novelties; and they furnish a medium for general information in relation to the business. Many horticulturists will admit that they got their most valuable information and experience in the exhibition hall. Members of horticultural societies do not take as much interest in exhibitions as they should, and this being the case it cannot be expected that the public will become readily interested. When exhibits cannot be made, the next best thing is to visit an exhibition, and when this is not possible the account of it should be carefully read in the horticultural weeklies.

People who are most associated with plants and flowers are to be found among the best citizens. There seems to be something, in spite of language, that exerts an influence upon actions. If the worst kind of criminals could be surrounded by a wall of flowers instead of the usual stone walls, more cases of reformation would result. Is not this alone a good reason for recommending flowers as good company through the exhibitions?

Preparing Exhibits for the Horticultural Show

BY JOHN T. HAMMOND

1. In preparing exhibits for horticultural shows, it is necessary that the intending exhibitor should be conversant with all the requirements set forth by the schedule, and be prepared to abide thereby in letter and spirit.

2. Selection of the best seed it is possible to procure should be made for annuals or vegetables.

3. Preparation of the ground for proper planting and necessary growing of plants until maturity of the flowers, fruit or vegetables intended to be exhibited should be carefully attended to.

4. Do not depend on chance offerings from Nature, but join hands with her and work with her, working with the purpose of doing better than you have been doing.

5. Plants under glass should have all the attention it is possible to give them. Careful potting, watering, heating and ventilation are absolutely necessary, but care should be exercised not to overdo things.

6. In the case of Palms and foliage plants, have them as clean and bright as Nature intended them to be, and not more so. While it may be legitimate to use soaps and mixtures of various kinds, the use of oils and other polishes which impart unnatural brilliancy to foliage should be discouraged. Nothing looks so overdone or unnatural as a Palm or group of Palms or foliage plants burnished to shine like the product of a lacquer plant. Judges should discriminate against such attempts to improve on Nature.

7. After the classes for entering are selected, it should be an exhibitor's object to fill his entries, and he should

not attempt to do more than is in his power. He should not have a surplus of entries in order that he may drop one or more if he cannot fill them successfully. Timid, would-be exhibitors should not be deterred from entering certain classes through awe of their competitors. Often such exhibitors could surprise the public by the excellence of their exhibits.

8. Leave nothing to chance; never guess when positive assurance can be made.

9. Don't delay entries with an object in view. Face defeat if necessary. We cannot all win; there must be some losers. If a loser, lose with good grace; show the people that you have at least been doing something. Learn by defeat; failures teach lessons as well as successes—failures are better remembered than successes.

10. A man may have first-class material, fit to compete with all comers, but be, unfortunately, short, say 10 per cent. of stock to fill a certain class. He might purchase it, or secure it in some way, and win, and he alone know how he won, but the draw would not be legitimate; the exhibitor has been guilty and his neighbor who supplied him, equally so with him, of a crime, in the eyes of the law, and an insult to decent society. An opportunity to defeat a rival is a temptation which, unhappily, some natures cannot resist. The mission of a horticultural show is to educate the masses, and, through competition, spur gardeners to their best efforts to the honor and glory of the profession. It is not a field for speculation or an opportunity to increase a bank account. In preparing exhibits for a show, the mind of the exhibitor should be prepared also. Judges are not looking at exhibits with the exhibitor's eyes. They are usually cool, impartial, unbiased gentlemen, and an exhibit may not look as good to them as to the exhibitor.

Arrangement of Exhibits at Flower Shows

BY BRUCE BUTTERTON

A committee on arrangements has much to do with the comforts of exhibitors and the proper placing of the exhibits in the exhibition hall, and the competition of its membership should be carefully considered by the president of an exhibition society. It too often happens that the major part of this committee is at hand with a lot of "hot air" suggestions in regard to arranging the show, and if an energetic chairman should call for active assistance the committee is instantly reduced to a corporal's guard or less. The committee of arrangements may be assisted by exhibitors in two ways. No exhibitor should be so neglectful of his duty to the committee, or to the welfare of the show, as to make entries he does not intend to fill, thereby upsetting the whole plan the committee has worked hard to complete in order that it may be effective. It is often found that reserve spaces are not taken, and when the time for judging arrives there are to be seen those unsightly vacant spaces which mar what otherwise would have been a beautiful picture. Had I my way, I would impose a fine of \$1 upon those making unfilled entries, for each entry. The other way in which the exhibitor could help the committee is by staging his entries early, so that the hall can be cleaned up and put in order before the judges are admitted. First impressions are important, and ordinarily they are anything but good. It has been said that the Newport gardeners build their plant groups in the form of one-sided hay stacks. This, I believe, is due to the cramped condition existing in their exhibition hall. One hundred square feet of space in which to place the plants, necessarily pushed up against the wall, does not afford much opportunity for originality of design. Newport needs a horticultural hall with ample floor space and properly lighted. In such a hall, I believe the hay stack groups would disappear and groups of plants, original in design, and specimen plants would be properly placed and so arranged that judges would not have to do a "marathon" around the hall in order to find all the entries in any particular class.

Children's classes covering wild flowers and school gardens should be continued, as these are in a most worthy cause and add prestige to a society; but I would suggest placing the tables containing these exhibitions in the most conspicuous part of the hall, and not in a side room, thus giving the children encouragement to arrange flowers tastefully. Teach your children to be fond of flowers and they are apt to be fond of home and become good citizens.

How to Secure the Attendance of the Public

BY JOHN A. FORBES

This is one of the most perplexing problems our Society has to solve. The miserable attendance at past exhibitions has been very discouraging both to the Society and to exhibitors. If it is impossible to get the people to turn out for the love of the flowers alone, then something should be done in the way of inducement. What that something should be is a matter of experiment. Is the lack of attendance due to the nominal charge made for admission? If so, it looks as if our efforts have been in vain. When on Sunday there was no charge, the attendance more than trebled that of the two days combined. Roughly estimated, 2000 passed into the exhibition on the Sunday of the last Fall show. Does that answer the question "Is it worth the money?" It would be setting a good example to the public if those

at the head of city affairs would take a little interest in the work of the Society and show their appreciation by attending exhibitions. If the State recognizes their worth, why not the city? It must be remembered that the exhibition was a flower show, not a moving picture entertainment, therefore, nothing that would lower the dignity of the occasion should be considered.

I am greatly in favor of having music at a flower show, and there could not be a better combination. The orchestra could play for a few hours in the evening when the majority of the people would be present. When people make up their minds to go anywhere, they usually go to some trouble to look well, and when they visit the exhibition they do not want merely to walk around the halls and march out again. They want to linger and enjoy it and pass a pleasant hour. When they tire of the exhibits the music is sure to take up their attention, and when, finally, they make up their minds to go home, they will leave the hall satisfied. Then, again, a good singer or quartet of singers would be an attraction. Another drawing card would be a plant lottery, the plants to be donated by members, the drawing to take place both days, in the afternoons. Two coupons could be attached to the admission tickets, one to be dropped in the box at the door, the other to be held by the purchaser. Another good plan would be to give prizes for the best papers on various subjects of interest to a man who owns his house and plot of ground such as how to beautify it, or how to grow vegetables, or anything pertaining to gardening. From these competitions gardeners should, of course, be excluded. The papers should be read and judged on the evening of the first day, the judging to be done by the exhibition judges. On the second day, there could be an essay competition for women, the subject to be a recipe for cake, or how to can fruit, or how to prepare certain vegetables for the table. For the judging of these papers I would be inclined to select women judges, not that our members are not competent to judge, but we simply cannot afford to lose members unless by a natural death. To advertise the show, I would recommend that posters be displayed in the most conspicuous places stating exactly what is to take place at the show.

Judging Horticultural Exhibits at Shows

BY RICHARD GARNER

To be a judge at a horticultural exhibition is indeed an honor, yet how few there are who will seek the appointment. It is a most unthankful duty, as it is impossible to please everybody. The appointing of judges, too, is no easy matter. Personally, I believe in the plan of selecting judges from among the members of the home society. It often happens, however, that among those who are competitors will be found the best material to choose from. Above all things, a judge should be just. A person may be ever so well qualified to pass on the merits of an exhibit, but if easily influenced will not make a good judge.

When judging an exhibit, a judge should not know or see anything other than its merits, and render a decision accordingly. In these days of specialists it is easy enough to find good men as judges in their particular line, such as Roses, Chrysanthemums, Carnations, etc., but that does not follow that they would make good judges in a general exhibition of plants, flowers, fruits and vegetables, such as given by most societies.

I believe in the three judge system. No matter how well qualified a judge may be, or how observant, I am of the opinion that three pairs of eyes will see and do better than one pair. There are three pairs of eyes to compare the several entries in each class, and it is seldom that three persons will see the same thing exactly alike; two, however, carry the point.

I favor a system where the classes are arranged in a series, as from No. 1 to No. 25, No. 25 to No. 50, and so on, should there be that many, classes appointing three judges for each series. Or appoint three judges on plants, three on cut flowers and three on fruit and vegetables. Or cut the number of judges down to six, three on plants and three on cut flowers, and whichever trio get through first could start in on the fruits and vegetables, the other three joining in when they were through. This would greatly facilitate the work of judging. Having had some experience I know how tiresome it is to wade through from 75 to 100 classes, and probably over 300 entries, to examine and pass upon same. It is not so bad when the judges are alone in the hall, but when the public are admitted it is doubly tiresome. The competitors are anxiously waiting for the premium cards to be put on, so that they may see how they have been handled by the judges. The public also want to see who the successful ones are, and should not be kept waiting.

Exhibitions, generally, seem to be governed by rules and regulations, all of which are good. The judging by the scale of points as printed in the premium list should be followed as closely as possible. A good committee of arrangements is very important, it will save the judges a lot of valuable time, many weary steps, and much annoyance, by having every entry in a class side by side. It is difficult to judge a class when part of the entry is at one end of the hall and part at the other end—it is not fair to the exhibitor nor to the judges. Let everything be done that will hasten the work of the judges, so that there may be no unnecessary waiting.

PRELIMINARY SCHEDULE OF PRIZES

NATIONAL FLOWER SHOW

Spring 1911

Flowering Plants—Miscellaneous

	1st	2nd	3rd
Acacias. Best 18 plants, not less than 4 vars....	\$60	\$40	—
Best 6 plants, not less than 3 vars....	30	20	—
Best 3 plants, one or more vars....	20	15	—

Best 3 10-in. pans, any other color....	5	3	2
Tulips, Early Double. Best 6 10-in. pans, not less than 3 varieties....	15	10	5
Tulips, Darwin. Best 12 10-in. pans, 12 vars....	20	15	10
Tulips, Cottage, or Late, other than Darwin, Best 12 10-in. pans, 12 varieties....	15	10	5
Miscellaneous Bulbs. Best collection, arranged for effect, other foliage plants admissible, to cover not less than 150 sq. ft....	50	30	—

Orchids

	1st	2nd	3rd
Orchids. Best collection, arranged with foliage plants for effect, to cover not less than 100 sq. ft. For commercial growers only....	100	75	50
Best collection, arranged with foliage plants for effect, to cover not less than 100 sq. ft. For non-commercial growers only....	100	75	50
Best collection, 12 plants, 12 distinct varieties....	50	30	—
Cattleya Trianae. Best specimen plant....	25	15	10
Cattleya Schroederæ. Best specimen plant....	25	15	10
Cattleya, any other variety. Best specimen plant....	25	15	10
Cypripedium. Best collection, not less than 2 varieties....	50	30	—
Best 6 plants, 6 varieties....	25	15	—
Best specimen, any variety....	10	5	—
Calanthe. Best 6 plants in variety....	15	10	—
Coleogyne. Best 6 plants....	25	15	—
Best specimen plant....	15	10	—
Dendrobiums. Best 12 plants in 12 varieties....	25	15	—
Dendrobium nobile. Best specimen plant....	10	5	—
Dendrobium Wardianum. Best specimen plant....	10	5	—
Dendrobium, any other variety. Best specimen plant....	10	5	—
Hybrid Orchid. Best specimen plant raised in this country....	15	10	—
Lælia anceps. Best specimen plant....	10	5	—
Lælia anceps alba. Best specimen plant....	10	5	—
Odontoglossum, any other var. Best specimen plant....	10	5	—
Odontoglossum. Best specimen plant, any var....	10	5	—
Oncidium. Best specimen plant, any variety....	10	5	—
Phalaenopsis. Best specimen plant, any var....	10	5	—
Vanda. Best specimen plant, any variety....	10	5	—

Roses

	1st	2nd
Roses. Best display in pots or tubs, any or all classes to occupy not less than 300 sq. ft., arranged for effect....	\$200	\$150
Roses. Best 12 climbing or rambling, 6 or more varieties....	60	40
Best 6 climbing or rambling, 3 or more varieties....	30	20
Best Crimson Rambler, specimen plant....	10	5
Best Lady Gay, specimen plant....	10	5
Best Dorothy Perkins, specimen plant....	10	5
Best Taubertschon, specimen plant....	10	5
Best Debutante, specimen plant....	10	5
Best Hiawatha, specimen plant....	10	5
Best climbing, any other variety, specimen plant....	10	5
Best Baby Rambler, Crimson, 6 plants....	10	5
Best Baby Rambler, Pink, 6 plants....	10	5
Best Baby Rambler, White, 6 plants....	10	5
Best collection of Hybrid Perpetuals, not less than 15 plants, not less than 6 varieties....	25	15
Roses. Best collection of standard, or tree, 12 or more plants, 6 or more varieties....	25	15

Ferns

	1st	2nd	3rd
Adiantum Farleyense. Best specimen....	\$5	\$3	\$2
Adiantum cuneatum, or its variety. Best specimen....	5	3	2
Adiantum. Best specimen, any other variety....	5	3	2
Aspidium. Best specimen....	10	6	4
Cibotium. Best specimen....	20	15	10
Davallia. Best specimen, any variety....	15	10	5
Gleichenia. Best specimen....	10	6	4
Nephrolepis exaltata and its varieties. Best display one of each, pots or pans not to exceed 8 inches in diam....	25	15	10
Nephrolepis Bostoniensis. Best specimen....	10	6	4
Nephrolepis Scottii. Best specimen....	5	3	2
Nephrolepis Fleroumii. Best specimen....	10	6	4
Nephrolepis Piersoni elegantissima. Best specimen....	5	3	2

Any exhibit of merit not included in above schedule will be properly recognized, especially any new, rare, or meritorious plants.			
Additions may be made to this schedule later on, if found advisable.			
Cut flower schedule will appear later.			

Spring Show of the Mass. Hort. Soc.

Indications are that the exhibition which is to be held in Boston Feb. 26 to 28, will even surpass previous Spring experiences.

The trustees have voted to add several classes to the preliminary schedule which was issued some time ago. Most of the new classes are for trade exhibits and we hope that not only New England growers but those from other States will be found in competition.

Carnations: 50 blooms respectively of white, flesh pink (Enchantress shade), light pink (Winsor shade), dark pink (Lawson shade), scarlet, crimson, white and variegated, yellow. Prizes of \$6, \$4 and \$3 will be awarded in each class.

50 Carnations, mixed, for private gardeners only, three prizes, \$6, \$4 and \$3.
100 Carnations, any one variety with suitable foliage, \$12, \$8 and \$6.

In Roses, prizes of \$12, \$8 and \$6 are offered for best 25 blooms in Killarney, any other pink variety, White Killarney, Richmond. For American Beauty, prizes of \$15 and \$10 for best 25 blooms. Any other variety of Rose, \$12, \$8 and \$6.

In Violets, prizes of \$4, \$3 and \$2 are offered for 100 Princess of Wales, any other single variety, Lady Hume Campbell, any other double variety.

Antirrhinum, 25 spikes, three prizes, \$5, \$3 and \$2.
Mignonette, 25 spikes, three prizes, \$5, \$3 and \$2.
Lily of the Valley, 50 spikes, three prizes, \$5, \$3 and \$2.
Best arranged Basket of Flowers, retail florists only, three prizes, \$15, 10 and \$5.

Group of flowering and foliage plants covering 100 sq. ft. Three prizes: First, silver medal and \$40; 2d, \$30; 3d, \$20.

3 Palms, distinct, not less than 8 ft. high, three prizes, \$15, \$10 and \$5.

12 Hardwooded plants (Acacias, Azaleas, Rhododendrons, Boronias, etc.) Three prizes, \$20, \$12 and \$8.

R. C.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co. Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the officers is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12.
Boston: Robert Cameron, Cambridge, Mass.
Philadelphia: A. H. Secker, 306 Wood Building, No. 34 So. 16th St.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Order; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

The Florists' Exchange Design Book

The new edition of the Design Book, now ready for delivery, will be found a decided improvement upon all former issues; it has been completely remodeled and contains 80 pages, covering a multiplicity of designs. It will be freely admitted the most valuable compendium of its character ever offered to the trade, as well as the cheapest. It is sold only in connection with a subscription for this paper; The Florists' Exchange two years and one copy of the Design Book, new or renewal subscription, for \$2.50.

Subscribers who have been patiently waiting for the new edition should receive their copy early in next week.

Soliciting Business for the Florists' Exchange

We are often advised of attempts being made to collect subscriptions from florists by persons unknown to us; therefore unauthorized by us. An unauthorized person is now working eastern Pennsylvania.

Occasionally these parties operate quite successfully, to the loss of those who confide in them. Such "collectors" are generally fairly well acquainted with the subscription rates of trade papers and magazines, and suit their methods to the person approached, soliciting subscriptions for magazines, trade papers or whatever periodical they think their victim is most likely to subscribe for. Generally speaking, they are impostors, pure and simple and, needless to say, pocket whatever they can succeed in collecting.

So far as The Florists' Exchange is concerned, we advise the trade to pay no money to any person approaching them as representing The Florists' Exchange unless said person can show full credentials as our duly authorized representative.

Should any person call upon you on behalf of The Florists' Exchange, either collecting news or soliciting business, said person will be enabled to demonstrate fully and without room for doubt, his authority to act as our representative.

The Florists' Exchange Semi-Annual Index

In January and July of each year we print, at considerable expense, a complete Index, alphabetically arranged, of all the informative matter which appeared in The Florists' Exchange the half year previous.

Formerly, a copy of this Index was mailed to every subscriber. Recently, this Index has been mailed only to those requesting a copy thereof as per notice published on our editorial page the first month in each half year; in the attempt to ascertain how many of our subscribers really kept a continuous file of the paper for reference we must say we are surprised that so few preserve their copies in unbroken order.

Fifty-two issues of The Florists' Exchange constitute a record of passing events and a mine of information which cannot be duplicated; our Index furnishes an immediate reference to it all. Bound up in volumes, two to each year, The Florists' Exchange is one of the most valuable adjuncts to the library, especially of the florist.

Your son, your foreman, or one of the brightest of your young men, would appreciate the annual gift of this paper in bound volumes, we are quite sure.

We would feel better repaid for our efforts to furnish the Trade with a standard horticultural publication if we could but feel that more of the complete volumes were being handed down to posterity than has been the case up to the present.

The American Carnation Society

Registration

The following registration of new Carnation has been made by the E. G. Hill Co., Richmond, Ind.

Niagara—The Belle Unknown. Pure white. Size, 3 to 3½ inches. A free grower, strong and healthy.
A. F. J. BAUR, Secy.

Whose Money was It?

On Friday, Feb. 4, we received by mail, a plain envelope, postmarked Morristown, N. J., containing money but no letter or memorandum of any kind. Will the sender kindly advise us as to amount sent and purpose for which it is intended?

A Promising New Climbing Rose

Speaking of Climbing Roses, it may be worth recording that a climbing sport of that splendid Dicksonian H. T., Lady Ashtown, is to be disseminated in June next, the stockholder being Bradley of Peterboro. Anyone familiar with the magnificent garden Rose, Lady Ashtown, will appreciate the climbing forms. The latter was commended by the N. R. S. in July last. It is selling at the usual price, 7s. 6d. each.

T. A. W.

Harry J. Veitch

From the Gardeners' Chronicle, Eng.

A Notable Presentation

At a complimentary dinner held in the Hall of the Royal Horticultural Society, London, on Tuesday, Jan. 26, a portrait in oils of Mr. Harry J. Veitch of the well-known firm of James Veitch & Sons, Ltd., Chelsea, London, the cost of which was defrayed by public subscription, was placed in the keeping of the Society as a testimonial of the general esteem in which he was held by the horticultural community of Great Britain. A similar portrait was presented to Mrs. Veitch. Mr. Veitch who, with Mrs. Veitch, was present at the dinner feelingly acknowledged the honor done him. We present herewith a reproduction of the portrait, taken from the Gardeners' Chronicle.

Some New Richardias

At the Rohais Nurseries of Mr. A. J. Guilbert, Guernsey, C. I., are some new Richardias, the result of crossing R. Elliotiana with the Godfrey Arum which was raised by Mr. W. J. Godfrey. The new variety has a leaf spotted white on the dark green and a mottled stem of purple, brown, and greenish-yellow, like the Golden Arum. Its leaves are more arrow-headed in shape than those of R. Elliotiana, and very similar to those of the Water Arrowhead, Sagittaria sagittifolia. The trumpet bracts, or spathe, are like those of Mr. Godfrey's Callas, pure white, with hardly a trace of green near the petiole; and the spadix is of a lemon-yellow, similar to the variety Mrs. Roosevelt. At the base of the spathe, on the inside, are deep purple markings. This promises to be a very popular market variety as soon as it is known, for the handsome foliage sets off the chaste blooms to perfection. The plants seem very floriferous.—Gardeners' Chronicle.

Fred Burki on Carnations

Mr. Burki, the newly elected president of the American Carnation Society, and president of the Pittsburgh Cut Flower Co., gave an interesting talk on Carnations before the Pittsburgh Florists' Club, at its recent meeting, of which the following is a summary.

The best sorts he grows are white Enchantress and white Perfection; best reds, Victory and Beacon; dark pink, Lawson and Afterglow, the latter sort not so productive. Scarlet Pink, Winona and Winsor, the latter the very best; in light pink, Dorner's Pink Delight and Enchantress.

In speaking of the best sorts to grow, the ones that are the most productive count. Plants should have bloomed sufficiently by January to pay expenses and, after that, should give a net profit. Of the newer sorts, O. P. Bassett is fine, particularly for exhibition purposes. Hoosier Lad was fine and easily entitled to the award it received. Alma Ward is beautiful, the flowers shown were better than ever before and kept splendidly; in fact, all blooms kept remarkably well as the conditions were most favorable. Mr. Burki also spoke about keeping qualities in general and thought that atmospheric conditions were much to be considered. It was perhaps best not to put blooms too deep in water. As to the style of greenhouses, he thought single houses were the best, particularly where we have heavy snows. As to benches, cement are undoubtedly the best and he will put in none but cement hereafter.

E. C. REINEMAN.

Illinois State Florists' Association Meeting of the Advisory Committee

A meeting of the advisory committee of the Illinois State Florists' Association was held at the Union Restaurant, Chicago, on Friday, February 4, and was well attended by many members of the Chicago Horticultural Society and others. There were also present President C. E. Gullett, Lincoln, Ill.; Prof. Blair, of the Illinois University, Urbana, Ill.; Secretary J. F. Ammann, Edwardsville, Ill. The object in holding the meeting was to interest the florists in the work that the Association has taken up to benefit floriculture in general, and the gentlemen stated they felt sure the coming convention would be more beneficial and instructive than any previous meeting of this young Society. The prospects are that a good sized delegation will leave Chicago on Tuesday, February 15, to be present at the two days' meeting at Urbana.

The Convention

The fourth annual convention is to be held in Morrow Hall, Agricultural Building, University of Illinois, Champaign-Urbana, on Tuesday and Wednesday, February 15-16.

The following is the program:

Program

Tuesday, February 15, 2.00 o'clock, p.m.—Address of welcome by Dr. Edmund J. James, president of the University of Illinois; Response by Phil. J. Foley, Chicago. Report of the secretary, J. F. Ammann, Edwardsville. Report of the treasurer, Frank L. Washburn, Bloomington. Report of the secretary of advisory committee for the Illinois Florists' Experiment Station, Willis N. Rudd, Morgan Park. Address, "The Value of the Experiment Station to the Florists, and the Duty of the Florists to the Station," Prof. J. C. Blair, Chief of Department of Horticulture, University of Illinois. Banquet.—The annual banquet will be served at the Beardsley Hotel, Champaign, at 7.45 p.m.

Wednesday, February 16, 9.00 o'clock a.m.—Address on behalf of the Illinois Outdoor Improvement Association, by Dr. J. W. Garner, Professor of Political Science, University of Illinois. Address, by C. L. Washburn, Chicago. Address, "Our Work," by H. B. Dorner, Associate in Floriculture, University of Illinois. Report of auditing committee. Unfinished business. New business. Question Box. Election of Officers.

The exhibition of cut flowers and novelties will be open to the citizens of Champaign-Urbana, to the students and faculty of the University, and to all who will accept an invitation to attend, from 7 p.m. to 10 p.m., Tuesday, February 15, and from 9.00 a.m. to 12 noon, Wednesday, February 16. It will be held in the spacious foyer of the new Auditorium on the University campus. Every grower is invited to send an exhibit. The display is no way competitive. Flowers should be shipped to Geo. B. Franks, Champaign, who will see that they are properly staged.

Books Received

THE HORTICULTURAL DIRECTORY AND YEAR BOOK FOR 1910. The Journal of Horticulture, 12 Mitre Court Chambers, Fleet st., London, E. C., England. Price, one shilling.

This, a fifty-first edition, is a very complete directory of the florists, seedsmen, nurserymen, gardeners and horticultural supply firms of Great Britain and Ireland, and contains, in addition, a vast amount of information in connection with the trade, including a list of the exhibition societies, and lists of the principal European, American and Colonial nurserymen, seedsmen and florists.

Propagation of Hardy Shrubs

Will you please tell me how and when I can start cuttings of the various hardy shrubs? I have access to a fine collection, mostly of the best sorts. I would like to start some Box. Could I start them under a greenhouse bench now?—J. S. K., Pa.

Increasing Hardy Trees and Shrubs

The Winter season is a good one for the propagating of evergreens from cuttings. Made early, and placed in heat in a greenhouse, they root by the time Winter is over. It is not too late to do this work in February though, when done earlier, the cuttings root more strongly than when made later. Those who lack experience will not go far wrong to put in cuttings of anything they wish in the evergreen line, for though there are a few things, such as Holly and Kalmia, which root with great difficulty, the number of sorts that will root readily far exceeds those that will not. The common run of them, Junipers, Retinisporas and Arborvites, root readily, and such as Cryptomerias and Sequoias are not hard, while the Lawson Cypress and the many Cupressus usually root freely.

Almost any small piece with foliage to it will make a cutting, still, a three to four inch size is a good one to make, and nothing is lost by adding to the length within reason as, when rooted, there is a nice plant to start with.

Flat boxes, say of 3" to 4" depth, are the size to use to hold the cuttings. Place an inch of good soil, on the bottom, and fill up with clean sand. When the boxes are filled with cuttings place them in moderate heat, increasing the heat after two or three weeks have passed, keeping sunshine from the cuttings until they are rooted.

Very many shrubs and trees root well from cuttings made now, placed in a cold cellar, buried in sand, and planted out in the nursery the first thing in Spring. The same may be said of these as of the evergreens, but the beginner may put in everything he likes. There are a few hard cases which are never attempted, Oaks and Hickories for example, but most all kinds will root in this way. The shoots of last season are the ones to use, and these are to be cut now, taken under cover and cut into lengths of 6" to 8", and then placed away as directed. Some propagators are indifferent to cutting to a joint, believing it makes no difference, but it does in nearly all cases, the stock making root more readily when so cut than when it is taken much below the joint. Make a clean cut close under a joint and success will be greater than if no attention had been paid to this particular.

How Grafting is Performed

Grafting of many trees and shrubs can be done in Winter; in fact, as well understood, many fruit stocks, such as Apples, Pears, Cherries, etc., are grafted by the millions indoors in Winter, being placed away in sand as mentioned for cuttings. A good strong root of a seedling Apple will cut into two or three lengths, each length to hold a cion. These are all done by wedge grafting, splitting the stock in the center and inserting a cion containing one good eye. Such small stocks will hardly hold the cion firmly without tying them. Raffia is often used for the purpose, and then the whole of the tied part waxed over. In some cases the whole of the cion is waxed to prevent evaporation, but in the case of such stocks as Apples and similar sorts, grafting is generally quite successful without taking the time to do that.

Where trees or shrubs are to be grafted under cover, the stocks being well rooted, and heat and space available, the work may be proceeded with, and the union effected before the advent of Spring. The stock should be introduced to gentle heat in advance of grafting, that there may be a good circulation of sap when the cions are inserted; the cions are to be kept dormant by storing them in a cool place, the stocks meanwhile being kept in heat two or three weeks in advance of the grafting.

Treated in this way there is then union and growth of cion by the time the warmth of Spring permits of planting out.

Outdoor grafting follows the same lines in this, that cions are held back in a cool building until the trees outside are about to burst into leaf, or at least until the buds are swelling, then the grafting is done. Such trees as start early must be taken first, while such late budding kinds as the Catalpa can be left very late.

All shoots, whether for cuttings or for grafting, should be cut off during the Winter; certainly before sap starts to flow in early Spring. If the sorts required for the work are not in hand send for them well in advance; if for grafting purposes they will do just as well buried outdoors as anywhere, should the ground be open.

Those who have fruit trees they wish to change the character of, say Apple trees, should cut back the shoots to within a few inches of the main stem, splitting the butts of the branches and inserting the cions in them. Young trees have several branches, usually, so that by grafting three or four of them a tree of good shape may be secured. If this cannot be done better to graft only the central shoot, counting on forming a tree from it.

Men We Meet

C. E. Howland

Mr. C. E. Howland, president and manager of the California Rose Company, Pomona, Cal., was born in 1863, under the shadow of the "Pilgrim Church," at Boston, Mass., a descendant of the John Howland who landed at Plymouth in the "Mayflower." His father died when he was five years old, leaving his mother with three small children and limited resources. Mrs. Howland then took her young family to rugged Maine, where living was cheap, schools good and work a plenty wrestling a livelihood from the stern hills and rocks; young Howland attended the little red schoolhouse Winters and ate good Apples and drank cider; he wrestled with the hoe, scythe and pitchfork Summers.

Finishing school at a private academy, at the age of 19, he went to New York and found his first position as printer's devil; the said "devil" had full charge of the business in less than two years at a salary of \$1000. Getting the Western fever in '85, he went to San Francisco, but found that city overrun with fortune seekers like himself. Unable to find employment he returned to the East in 1886, finding employment in the nursery business at Rochester, N. Y.

C. E. Howland, Pres. and Manager California Rose Co., Pomona, Cal.

About 1888 he engaged in the nursery business at St. Louis for a period of five years, from thence transferring the business to Chicago. On account of failing health he went to Los Angeles in 1896 and at once engaged in the nursery business there, selling, through traveling salesmen, a line of ornamental stock over the Coast and Southwest. Mr. Howland discovered very quickly that it was impossible to buy stock either in quantity or of satisfactory quality to handle the business he was getting; he also found that his sales were running to about ninety per cent. Roses. This settled his line of action, which was first to produce the Roses in quantity and variety and then sell the same through catalogs to the retail trade as well as to the wholesale trade throughout the United States.

THE FLORISTS' EXCHANGE Is A Business Paper For Business Men

A Revolution in Garden Spade Making

One of the most important tools in the garden is the hand spade, as used for digging purposes, but curiously enough the present day tool has scarcely advanced in design since it was introduced, the only improvements being in workmanship. Now, however, we have a distinctly new pattern for digging, and one that appears to possess good points. It is made by the foremost garden tool manufacturer in this country, The Handy Patent Pick Co., Sheffield. The blade, instead of being flat and square edged, is undulated after the style of corrugated iron, and the end of the blade is fashioned into three points. It has the good features of the fork for heavy ground and the advantage of the spade on light soil.

T. A. W.

An Opportunity for a Skilled Man

Beginning about April 1 we will need a good gardener and greenhouse man. He should be able to do work in plant crossing and plant breeding under our directions and to assist in the practical part of horticultural instruction. We will pay a good man \$1200 per year to begin with.

Applicants should address C. B. Waldron, Dept. of Horticulture and Forestry, Agricultural College P. O., North Dakota.

John Pugh Burn

Mr. Burn, who was a son-in-law of the late Thomas Meehan of Philadelphia, and the active head of the Operating Department, the Landscape Gardening Branch of the business of Thomas Meehan & Sons, Inc., died suddenly, on Friday of last week, of acute indigestion while riding on a train near Columbia, S. C. He leaves a wife and one child.

Wallace L. Scott

Wallace L. Scott of Grand Rapids, Wis., a well-known florist, died at his home in that city, on Jan. 31, the cause of his death being paralysis. He had been in poor health ever since he suffered with his first stroke of paralysis about four years ago. Two years after, he had a second stroke and on Jan. 25 he received a third, from which he never rallied.

Mr. Scott was a glassblower by trade and followed that until he went to Wisconsin to live, since which time he had taken up farming and floriculture. He was an old soldier and member of the G. A. R.

James K. Kerr

James K. Kerr, Sr., for fifty years foreman of gardens and grounds of the Department of Agriculture, died at his home, 211 13th st. southwest, Washington, D. C., on Feb. 5. Mr. Kerr had been ill for about four months and since Dec. 11 had been confined to his room. A widow, two sons and two daughters, all residents of Washington, survive him.

Mr. Kerr was eighty-one years of age. He was born in Edinburgh, Scotland, and came to the United States when quite young. For a time he lived at Winchester, Va. He was appointed in the Department of Agriculture when it was located at 4½ st. and Main ave., and laid out the grounds of the Department. He was a member of Lebanon Lodge, No. 7, F. A. A. M.; Eureka Royal Arch Chapter, No. 4, and De Molay Mounted Commandery, No. 4. He was also a member of Mithras Lodge of Perfection and Evangelist Chapter, Rose Croix, of the Ancient and Accepted Scottish Rite, and of Almas Temple of the Mystic Shrine. Mr. Kerr had for many years been a member of the Caledonian Club.

Henry A. Stone

Henry A. Stone, a well-known florist of Kingston, N. Y., died at his home in that city Jan. 29, after an illness extending over five years, at the age of 73 years.

Mr. Stone was born in New York City in 1837 and was the son of Jeremiah Stone. For eleven years he lived and went to school in New York City. Upon the death of his mother he took up residence with the late Herman LeRoy Newbold at Westchester, who was lost on the Arctic. While at Westchester he learned the machinist's trade at the Saugatuck Locomotive Works and went to school several terms. He also became interested in gardening and greenhouse work and after serving an apprenticeship of several years he secured a position as assistant gardener at Mr. Delano's place at Newburgh. After two years he became head gardener for Mr. Watts at Westchester. In 1863 he took charge of the estate of Robert Donaldson at Barrytown. In 1867 Mr. Stone bought his present residence on Flathush ave., Kingston, and started to build greenhouses and to plant all kinds of fruit and vegetables. Mr. Stone was the pioneer Violet grower in this part of the State and was so successful that in New York he was known as a "Violet king" and was a wholesale florist in New York for four years. At his death he was a member of the First Reformed Church; of the Minne-ha-ha Temperance order; of the Royal Templars of Temperance; of the Twentieth Battalion in which he was inspector of rifle practice with rank of captain; of Empire No. 1 Fire Co. of Westchester; and was also trustee of school district No. 8 for two terms. The deceased is survived by two sons and two daughters.

Mrs. Stone died three days before her husband. She had zealously nursed and cared for him until one week before her death her strength gave out and she fell a victim to pneumonia. Her thoughts were for everyone but herself, and her only regret was that she could not be with Mr. Stone until his end.

At the Banquet of the N. Y. and N. J. Plant Growers' Association Held at the Hotel Astor, New York, February 2, 1910

The National Council of Horticulture

This organization held a meeting at the Auditorium Annex, Chicago, Jan. 17, 1910. There were present C. E. Kendel and C. Cropp from the American Seed Trade Association; E. D. Smith and W. N. Rudd from the Society of American Florists; J. H. Burdett of the Press Bureau Service; J. C. Vaughan, chairman and H. C. Irish, secretary. Letters or telegrams were read from J. Horace McFarland, J. Otto Thilow, F. R. Pierson, and C. L. Watrous.

The term as delegates at large of Professors W. B. Alwood, S. A. Beach and S. B. Green having expired, Professors Alwood and Beach were elected to succeed themselves and Professor J. C. Blair of Urbana, Ill., was elected to succeed Professor Green. It was announced that C. Cropp and C. E. Kendel were the authorized representatives in the Council from the American Seed Trade Association, J. Otto Thilow, E. D. Smith and W. N. Rudd from the Society of American Florists, C. L. Watrous and Guy A. Bryant from the American Association of Nurserymen, H. S. Watson and J. F. Wilson from the National Nut Growers' Association.

The secretary reported \$183.22 on hand and \$200 available from the American Seed Trade Association, or a total of \$383.22 for the current year's work.

Mr. J. H. Burdett made a report on the Press Bureau work in which he said: "By keeping faith with the newspapers of the country for several years, distributing articles which are interesting to the general reader, and at the same time free from suspicion of being advertising matter for any particular article or firm, the Council of Horticulture has won a most valuable good will. The greatest newspapers in the country accept the articles with confidence in their freedom from that 'free advertising' taint for which newspapers are always on the lookout. All the matter sent out by the Council is printed in a great number of papers. The Chicago Daily News has printed every article sent out by the

Council in the last three years, and given each article a characteristic heading, crediting it to the Council. The same method is followed by many other dailies. The service last Spring was sent to 500 newspapers and news bureaus, and by the latter it was sent in the form of 'hoiler plate' to several thousand country weeklies and small dailies. The position of authority which the Council has obtained with these newspapers and bureaus should be maintained by keeping up the press service. There is no room for doubt that the publicity given to horticulture by the bureau is worth many times its cost."

The possibility of instituting a paid service was suggested but, after a full discussion, it was thought inadvisable to do so at this time. After further discussion, the secretary was instructed to ask the assistance of experts in the preparation of articles, and to arrange a schedule for their distribution as soon as practicable. Some sixty subjects were suggested, one-half of which the members present pledged themselves to prepare. It was arranged to send out at least ten installments this Spring, beginning the latter part of February.

H. C. IRISH, Secretary.

Dobbie & Co. (Great Britain) a Rising Firm

I was pleased to note my esteemed friend, Wm. Cuthbertson, has given you a few figures respecting the Parcel Post in this country. Dobbie & Co. are among the many firms that have undoubtedly benefited by the system of bringing goods right up to the door in the most out of the way spot. During recent years this firm was developed enormously, and has come to be looked upon as one of the leading concerns engaged in the nursery and seed trade, and their limit is evidently not yet reached, for a huge and magnificent building is now being erected for them in Edinburgh, the premises at Rothesay being inadequate. In addition, the firm has a splendidly managed farm in Essex, where seed is grown on a large scale, Sweet Peas being a special feature. T. A. W.

Spring Exhibition of the American Rose Society In the American Museum of Natural History, New York City, March 16 to 18, 1910

The Executive Committee and other members have held two conferences in New York in regard to the details of the coming Rose show. The total amount of prizes offered in the schedule reaches some \$1500. In conjunction with the Rose show the Horticultural Society of New York offers a preliminary prize schedule the total offerings of which amounts to \$700.

S. S. Pennock-Meehan Co. of Philadelphia offer a special prize of \$25 to be awarded in the discretion of the committee.

Moore, Hentz & Nash of New York offer a solid silver cup, valued at \$50, for the best six Roses, two to be white and four to be red, pink or yellow, American Beauty excepted.

Wm. F. Kasting Co. of Buffalo offer a prize of \$25 to be applied wherever it can be best used.

The Toronto Hort. Society offers one of its silver and bronze medals.

Arthur T. Eddington of New York offers a cash prize of \$25.

Stumpp & Walter Co. of New York offer special prizes of \$10 and \$5, open to private gardeners only, for 25 Richmond Roses.

A valuable paper is being prepared by W. S. Sihson upon the Roses of the Northern Pacific Coast.

The Horticultural Society of New York will issue, jointly with the American Rose Society, the preliminary prize list and rules within a few days. Mr. Joseph A. Manda has been appointed superintendent of exhibits. President Poehlmann is urging the Chicago people to make a fine exhibit in New York. The New England craft will be present with the best that they can produce. This exhibition is regarded by some of the strong people in New York as one of public education at which it is expected thousands will be present.

Vice-president Pierson, ex-President Simpson and Treasurer May are working like heavers to insure the practical success of the undertaking.

BENJAMIN HAMMOND, Secretary.

How Can Condensation be Stopped?

Editor The Florists' Exchange:

In answer to H. J. Md., page 215, issue of The Florists' Exchange of Feb. 5, would say that nothing will stop the condensation in the roof of his potting shed, except that he build a double roof. He must either build another roof over the present one, with a space of at least 3 in. between the two roofs, or he can put a floor below the roof. Tar paper nailed below the roof so as to leave a space of 3 in. between the roof and the tar paper, will give the same results. I have been in the same trouble. I built another roof over the present one, with 3 in. of space between, and have not had a drop of condensation, even in the coldest weather.

Traveling Greenhouses in England

We are sending you herewith photograph which we received some time ago from England, showing arrangements of traveling greenhouses which are used to a considerable extent in that country. You will see, by referring to the photograph, that the gutters of the houses are built so as to form runways on which the house can be moved. The houses are used during the Winter in one position on account of the heating pipes; then in the Summer, when the houses are to be moved to a different position, the heating is arranged so as to be left in place and the houses moved away from it.

KING CONSTRUCTION COMPANY.

North Tonawanda, N. Y.

Traveling Greenhouses in England

Single Flower Dreer's Select Late Branching Aster

The Aster, a Favored Flower of Summer

Although the Aster was introduced into the commercial world nearly 200 years ago, it is only during the past twenty-five years that its value as a Summer blooming plant has become recognized. Its evolution from a small single flower to its present day stage, has been slowly but surely accomplished, and the results have been such that the great cut flower centers of the country depend upon it as a staple article of sale, during the early Fall months. A succession of bloom, in many colors, can be obtained from early July until snow flies; the last crop, including the well-known Branching Asters, being particularly valuable.

Many varieties and groups have become established so that the most fanciful taste can be satisfied, as is evidenced by the contents of the many seed trade catalogs, which are mailed to practically every corner of the United States.

The original Asters were brought from China to Europe about 1731, by a Jesuit Missionary, named R. P. d'Incarville. At that time it was a single flower, the outer rays or florets being white, blue or violet in color, and the center of a yellowish cast. Seeds of these Asters were received in England in 1736, but the double varieties were not heard of until some years later. Up to about 1885 some 250 varieties were known, since which time the well-known Vick's Branching Aster was introduced. Its habit, range of color and ease of cultivation, besides the length of time that the flowers are durable, both cut and on the plants, at once made it popular, and from that time this type has become a favorite flower for the Summer garden. Besides these Branching Asters, several other types are well known, including the Comet, Imperial, Semple and Late varieties, as well as the Peony-flowered type, all of which can be had in almost any color.

Every retailer recognizes the demand for Aster plants by the dozen or hundred, from May 1 to July 4, and this is the time of year to secure seed; it behooves every grower to look over his catalogs and place his order before the various colors are sold. It is nearing time that early flowering varieties be sown, in flats, after which they can be transplanted in rows, 2 in. apart into coldframes; these of course to be protected if very cold weather prevails.

Growing Asters for Seed

Asters undoubtedly form one of the most important supplies in florist cut flowers during the months of July, August and September, and the production of seed of strictly high-grade sorts receives special care at the hands of our leading seedsmen. Until a few years ago, Germany furnished practically all of the Aster seed used in the world, but the American market is now largely supplied by American-grown seed, the quality of which is as high as any ever imported, and the germination usually much stronger. The merits of many American sorts are now acknowledged by the Europeans, and quite a quantity of seed is annually exported. Years ago, American Aster seed was saved in small lots by florists who secured what they could after using the finest flowers for cutting. This practice is all changed and there is

now annually not less than one hundred acres planted in different parts of the country, exclusively for seed. The accompanying photograph shows a field, in the western part of New York State, of Crego's Giant Comet White and Shell Pink Asters being grown for Henry A. Dreer of Philadelphia.

On this farm about ten acres are devoted to high-grade Asters for seed only, no flowers being cut for sale. When the representative of the Dreer firm made his annual tour of inspection, in September last, he made some inquiries from their grower as to how that specialist handled his stock, and the information which follows will undoubtedly be of general interest.

SOIL: Is a clayey loam.

FERTILIZER: Four hundred pounds per acre of high-grade commercial when applied in connection with well-rotted stable manure; six hundred pounds per acre when used alone. This is thoroughly incorporated with the soil about ten days before setting out the plants.

SOWING THE SEED: Early and midseason sorts, including Early Wonder, Snowdrift, Lavender Gem, Day-break, Pink Beauty, Crego's Giant, etc., are sown in a coldframe about April 1. Late Branching kinds are also sown in coldframes about April 15.

TRANSPLANTING: The early varieties are transplanted to the open ground about May 10, midseason sorts about May 15, and the late kinds from June 10 to 15; these dates are, of course, rather elastic, everything depending on local weather conditions.

CULTIVATION: Thorough cultivation is given throughout the season, the fields being kept perfectly free from weeds. Most of the cultivation is done with a horse hoe, and for this reason the plants are given ample room between the rows, the early and midseason sorts being planted 8 in. apart in the rows, and 30 in. between the rows; the late sorts, 12 to 14 in. in the rows, and 30 to 36 in. between the rows.

As soon as the various lots come into bloom, any plants which are untrue, or not up to standard, are pulled up and destroyed. The grower goes frequently through the fields, carefully marking with a stake the most perfect plants of each kind, from which is saved the stock seed to produce the following year's crop, and it is largely owing to the great care exercised in the selection of these stock plants that the present high standard of American Asters, as now sold by the leading seedsmen of the country, is due. Any failure of the grower to attend to this part of the work is certain to be reflected in a deterioration of the quality of future crops.

In the locality where these Asters are grown, disease, blight, etc., are practically unknown, and if the plants produced from these seeds are affected by fungus or other troubles it is reasonable to assume that they are caused by local conditions, and not by inheritance.

The Rose Remains Undisputed Queen

In defiance of the glamor of Sweet Peas, and the plethora of wonderful novelties in recent years, the Rose in the garden holds her own. Aye, more than holds, for the gardeners and the amateurs are flocking to her banner in ever increasing thousands. Nine hundred new members joined the National Society in 1909, making a total of about 3500, all paying at least 10s. 6d. (\$2.50) subscription. The trade has been scenting this

Single Flower of Crego's Giant Comet Aster

all along, and the breeders have steadily been working for the ideal Rose that would attract the public attention.

The two Dicksons, McGredy's, Paul & Son, Bide, and a host of others at home, are now turning out novelties, while the French, German, American and Australian are helping them. The gardening enthusiast sees these new wonders, and becomes a Rose devotee. Old garden favorites are pushed out to make room for the Roses, and still there remains the eagerness for good new kinds. Let them come from where they will, so long as they be good, and the Britisher will scrape his pence to get them! The raiser, of course, is not the only one to benefit.

Hundreds of nurserymen all over the country are making a specialty of hardy Rose growing and between the lot of them they dispose of plants that must number millions.

The three big Irish firms grow about one million Roses annually.

The Autumn and Spring sales of 1909 and 1910 will probably surpass all previous sales, for one firm of my acquaintance cleared out of all the newer sorts of Roses before November ended, despite their big stock.

This demand is not confined to this country alone, for in November, the great wholesale firm of Gouchault & Turbat of Orleans, France, were unable to supply some of the recent sorts.

T. A. W.

Dreer's Field of Crego's Giant Comet White and Shell Pink Asters

Catalogs Received

J. L. DILLON, Bloomsburg, Pa.—Wholesale Catalog, for 1910, of Roses and Carnations. An eight-page publication covering rooted cuttings of the best trade varieties of Roses and Carnations, also Verbenas and Coleus.

REICHARDT & SCHULTZ CO., Houston, Tex.—Eleventh Annual Catalog of Garden, Field and Flower Seeds. This is a 64-page publication containing an extended list of vegetable and flower seeds best adapted for the South. The Catalog is well illustrated and appears within lithographed covers illustrating vegetable and flower specialties.

WOOD, STUBBS & CO., Louisville, Ky.—Spring Catalog of Blue Ribbon Vegetable and Flower Seeds, Summer Flowering Bulbs and Roots, Tree Seeds, Grass and Field Seeds, Implements, Fertilizers, etc. This publication contains 50 pages, well illustrated and is bound in handsome lithographed covers displaying vegetable and field specialties.

DIGGS & BEADLES, INC., Richmond, Va.—Catalog of Seeds for 1910. This is a 64 page publication covering a well selected line of Vegetable and Flower Seeds, Farm and Field Seeds, Poultry Supplies, Fertilizers, Insecticides, etc. It appears with lithographed covers bearing representations of vegetable and flower specialties. Illustrated.

WAGNER PARK CONSERVATORIES, Sidney, O.—A 40-page Catalog of Roses, Hardy Plants, Hardy Flowering Shrubs, Trees, Fruits, Ornamental Hedge Plants, Shade and Ornamental Trees, Conifers, Evergreen Shrubs, Vines, Cannas, Dahlias, Decorative House Plants, Lawn Requisites. Among the novelties are noticed *Hydrangea grandiflora alba*; Wagner Park Mallows; and *Roses Flower of Fairfield*, and *Veilchenblau* (Blue Climbing Rose). The publication is printed on excellent paper stock and bound in duotone covers. Illustrated.

GRISWOLD SEED CO., Lincoln, Neb.—General Catalog of Vegetable, Flower and Farm Seeds, Bedding and House Plants, Hardy Perennial Plants, Summer Flowering Bulbs, Hardy Lilies, Roses, Climbing Vines and Bulbs. The catalog lists "Corn-Saver Beet," a new plant which is highly praised as a hog food. "New Shalun," a non-saccharine Sorghum from India, is praised as a valuable garden, and it is stated that it produces more seed than any of the cane or sorghum family and about double the amount of either Red or White Kaffir Corn. The covers of the catalog are illustrated in colors, one with a collection of Vegetables, the other showing a collection of Climbing Nasturtiums.

W. ATLEE BURPEE & CO., Philadelphia.—Burpee's Wholesale Price List, for Market Gardeners and Florists, of the Best Seeds that can be Grown, for 1910. This publication, marked "Blue List," contains 102 pages, and is the third of the firm's series of catalogs for this season. Various vegetable and flower seed specialties selected from the firm's general retail catalog are given prominence, and the general lines of seeds are as complete, but all the price markings are made on a trade basis. The firm's new Neapolitan large early, new Sweet Upright, and Chinese Giant Peppers are subjects of color plates. The publication is well printed and illustrated, and appears within printed covers, with illustrations of ornamental specialties for the home and garden.

THE MOORE SEED CO., 333 Market St., Philadelphia.—Wholesale Price List of Seeds for Market Gardeners and Florists, 1910. This is a 62-page publication, the result of the 40 years of careful seed growing experience of this well-known house. An excellent line of vegetable seeds is described, among them many proprietary varieties, such as Moore's New Giant Bush Lima Beans, Moore's California Mammoth Golden Self-Blanching Celery, Moore's Early Cabbage Head Lettuce, Moore's New Early Royal Pink Tomato, and other good things. The catalog is well compiled, the descriptions of the different vegetables full and explicit, and copies should be in the hands of every florist who grows vegetables commercially, under glass or otherwise. The illustrations are both numerous and novel, and, taken altogether, the publication worthily represents advanced ideas in vegetable culture. It appears in lithographed covers, the front page picturing a fine Tomato plant.

SCHLEGER & FOTTLER CO., Boston, Mass.—1910 General Catalog of Vegetable, Farm and Flower Seeds. Among the specialties for 1910 we note Bean "Full Measure," a stringless variety of recent introduction, with green pods 5 in. long, round, firm and tender, an illustration of this Bean is shown on the back cover page. "Fortuna Special" Brussels Sprouts is noted as remarkably prolific variety and one which rarely fails to produce a satisfactory crop. Tomato "Comet" is claimed as the best Tomato for forcing; not only is it very attractive, but of excellent shape, color and quality, being of medium size. In French Seed Novelties and Specialties for 1910 there are introduced quite a number of new Asters and a Giant Blue Marguerite (*Agathaea celestis monstrosa*), an ex-

cellent pot or border plant with flowers twice the size of the old sort. Many other novelties and later introductions are catalogued, among which probably that of *Salvia splendens pyramidalis*, bearing large flowers of the most intense scarlet, on long spikes, will be found one of the most useful; it is particularly adapted for pot culture or for beds and borders.

VAUGHAN'S SEED STORE, Chicago and New York.—Catalog of Vegetable and Flower Seeds, Plants, etc., for 1910. This is a 160-page publication gotten up in the usual good Vaughan style and embracing practically everything in the seed and plant line. There are seven pages of novelties and specialties in vegetable seeds, among the novelties being a new green-seeded pole Lima Bean called "Carpinteria," the distinctive feature of which is the green tint on the bean, which color it retains in the dry ripe state to a greater extent than usual; a new bush Bean called Vaughan's Monster Stringless; a new Sweet Corn called Early Iowa, almost as early as Malakoff and much larger; Hoodo, a fine new Cantaloupe; a new early dwarf Pea called Little Marvel; Vaughan's New Fill Basket Spinach, plants of which have reached a diameter of 24 inches; a new Tomato, Early Best. Flower seed novelties and specialties occupy seven pages, and cover some of the newer forms of Asters including the new Mikado Pink; *Anchusa Bugloss*, a novelty; a new Calliopsis, Tiger Flower; *Centaurea Americana alba*; new single *Chrysanthemums*; new *Delphiniums*; *Burbank's Dahlias*; new *Campanula*; *Shasta Daisy*; *Dimorphotheca aurantiaca*, the golden Marguerite; *Burbank's new Eschscholtzia*; new *Petunias*, *Phloxes*, *Nasturtiums*, *Primulas*, *Stocks*, *Scotch Violas*, *Pansies* and *Sweet Peas*. *Gladioli* are very prominent, and a page color plate is presented of the varieties *Amerigo*, *Princes* and *Mrs. Francis King*. Another color plate shows the *Canna King Humbert*, and *Burbank's purple-leaved Plum*, *Othello*, *Vaughan's own introduction*. The general lists of both vegetable and flower seeds are very full and complete. Summer flowering bulbs take up considerable space, as also do *Cannas*, *Dahlias*, *Chrysanthemums* and *Geraniums*. Ferns, Palms and other decorative plants are given prominence, and six closely filled pages are devoted to *Roses*, *Hardy Climbing Vines*, *Perennial Plants*, *Peonies*, *Ornamental and Flowering Shrubs*, *Shade and Ornamental Trees*, *Fruits*, *Grasses* and *Field Seeds* are all given prominent space as are *Fertilizers*, *Garden and Greenhouse Tools* and *Requisites*. There are 160 profusely illustrated pages in the publication, which appears in very handsome lithographed covers with gold ornamentation, the front page bearing a Sweet Pea design backed with garden views, and the rear page showing a vegetable garden view with vegetable specialties prominent.

W. W. RAWSON & CO., 5 Union St., Boston.—Catalog of Rawson's Renowned Dahlias and Superb Gladioli for 1910. A 103 page volume in handy, pocket shape, which undoubtedly is, as its compilers state, the most complete Dahlia catalog ever published and covers the firm's own collection, which contains the world's production of two important flowers, the fruits of the authors' five years of endeavor to collect the several thousand varieties from every corner of the globe. It contains, easily, a thousand more varieties than has any other catalog ever published, and is strictly up to date, embracing even the latest introductions of American and European specialties. All descriptions given are the original descriptions of the introducers, and have been translated into English from eight foreign languages; and the photographs reproduced are all made from average specimens. In the preface it is explained that during the season of 1910 over a thousand new varieties will be tried out and the best only selected. In the firm's collection are combined the introductions and productions of England, Scotland, Ireland, Germany, France, Italy, Spain, Denmark, Holland and Belgium, Australia, and South America. There are cultural directions given for growing Dahlias and instructions how to grow them for exhibition, as well as much other information. Several new Cactus Dahlias are described, including the prize winner, Boston Yellow. The general list of the Cactus sorts is quite extended, many pages being given up to this section. Decorative Dahlias also are extensively listed. Peony-flowered Dahlias occupy some eleven pages, the collection including five splendid novelties for 1910. Sections devoted to Show Dahlias, Pompons, Singles and Collarettes are also important features of the book. The section devoted to Gladioli is of much interest, and includes an important introduction of the firm's own, and four splendid sorts of foreign introduction. The general collection is very complete. The publication is beautifully illustrated with new half tones of good size and of more than ordinary merit, and is bound with covers bearing representations of half one of types of Peony-Flowered Dahlias. Every florist should have a copy of this catalog whether a Dahlia enthusiast or not.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, not necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants flowers and seed vessels if possible. In addition to this, it stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing, it would often enable identification of specimens difficult to determine otherwise.

(41) Trouble with Snapdragons.—Under separate cover I am sending you some specimens of my Snapdragons. Please tell me the trouble. The white flower stalk is nearly four feet tall and as you see is getting a light discoloration on the stem up near the bloom; in a few days it causes the stem to bend over as in the pink specimen, and finally breaks off as in the third stalk enclosed. Some of the plants have made a fine growth and others appear stunted with the leaves curled; there are many buds, but a great many of them are becoming affected as sample. I am fumigating them with tobacco twice a week, and spraying them with the hose. Will you kindly tell me the cause of the trouble and the remedy for it; as I am afraid it may ruin my whole crop?—A. J. D., New York.

—Samples of Snapdragons sent here we found to be filled with red spider, and judge from appearance that you are keeping your greenhouse too warm, a condition which the Snapdragons do not like. About 45° to 50° at night is plenty. We could suggest frequent syringing of foliage to keep down red spider, plenty of ventilation when possible, and paying more attention to prevent overwatering and overfeeding, which we think, together with too high temperature, is the cause of the spots on flowers stems.

(42) Treatment of Geranium Cuttings.—Will you kindly answer through your columns the following questions. (1) What is the proper temperature to keep sand in a Geranium cutting bench? (2) Is ventilation beneficial for same? (3) Kindly name a suitable list of pot plants to be started from now on for wholesaling next Fall and Winter. Have been told by a certain florist that he is able to root Geraniums in ten days, with no losses from decaying. Is this not better than in general practice? (4) Is one year old Celery or Tomato seed of any use?—A. B. R., New York.

(1) Geranium cuttings need a temperature in sand about 60°, in which they make root in from 15 to 21 days according to the condition of cuttings. Warmer temperatures than this produce quicker results, but are not to be advised as often disease asserts itself, a condition which no florist desires. Ventilation when possible is necessary. (2) Cyclamen, *Primula obconica*, *Lorraine Begonias*, *Primula chinensis*, *Tuberous Begonias*, *Gloxinias*, besides many annuals which can be grown from seed sown now, and planted out and potted separately when in bloom, such as the *Coxcomb*, *Asters*, *Schizanthus*, *Cinerarias*, etc. The hardy *Chrysanthemums* also give a good list to select from, as well as the Japanese types; not forgetting, of course, *Palms*, *Ferns*, *Crotons*, *Dracenas* and other decorative plants. (3) Vegetable seed one year old should be good, but take a little longer before germinating.

(43) Best White and Pink Roses for a Retail Grower.—I would like the names of the best white and pink Roses for a retail grower to plant. I have grown the Bride and Bridesmaid for years quite successfully and thought of changing to the Killarneys. Can Killarney be successfully grown in beds or does it do better on raised benches? Is it subject to black spot or mildew? What temperature does it thrive best in and is it as easy to propagate as the Bride and Bridesmaid? Also is it a heavy feeder?—B. E. N., Va.

—The white and pink Killarney Roses have proved to be very popular among growers and retailers and, in the New York market, are in better demand than other Roses. The culture of the variety is considered even easier than is necessary for the Bridesmaid types, as the vigor of the Killarneys is greater, and they resist mildew and black spot readily when grown under proper con-

ditions. Temperature necessary, 58° to 60° at night. It is a matter of opinion as to whether solid or raised benches are the best. But in most of the newly constructed houses, solid benches with cement sides are used and found satisfactory. Feeding should be resorted to same as for other Roses, a great deal depending on the condition of soil, plants, and season of year. Would suggest you try 500 plants of Killarney before going into it too heavily, as this quantity will give you full opportunity to study its requirements.

(44) Carnation Troubles.—Enclosed find some foliage from the bottom of our Carnation plants for your inspection. Can you give us a cure for the trouble? Houses are standing north and south and the plants are set 6x10 and 8x10. Our Carnations are about off crop. At what stage should the next crop be in order to feed them without danger? And what would you feed with? The plants are weak in the stem. Is there anything we can apply to make them stiffer?—L. N. F. Co., West Va.

—The leaves from the base of Carnation plants are such as are usually found at this time of year and are naturally dead, especially as some of your plants are so crowded. The upper leaves appear healthy, except for red spider, and some effect of green fly, to rid yourself of which syringing and fumigating should be resorted to. As your plants are now making new growth, would suggest light feeding often, say once a week, with liquid cow manure, or apply a light top-dressing of bone meal, or pulverized sheep manure, in a ratio of 5 parts of soil to one of manure. Or scatter the manure on the benches around base of plants, and rake same carefully into the soil, taking care not to disturb the roots near the surface. A good opportunity presents itself, now that your plants are off crop, to keep the temperature a trifle lower, giving air whenever possible. Carnation stems at this time of year are usually weak, especially after a spell of cloudy weather. This condition will gradually improve as the days grow longer. When watering see that water goes to bottom of the bench, as this is sometimes the cause of weak stems, the bench at bottom often drying out faster than at top, on account of the heat from pipes. Bordeaux mixture lightly sprayed on at this time of the year is a good way to prevent disease and adds to the general health of plants.

Buffalo, N. Y.

At the Club meeting held at Kasting Hall, the nominations of officers for the ensuing year were made as follows: Jos. Striet and Wm. H. Grever for president; Otto Gillis, vice-president (no opposition). Wm. Legg was nominated for secretary (no opposition). Mr. Legg has filled this office for the previous term and no better man could be had for the place. For treasurer, Jos. Sangster, Chas. Sandiford and Louis H. Neubeck. For financial secretary, Jerome Thatcher, one of Kasting's able assistants.

The election will be held on Tuesday, March 1 at a place to be decided upon by the committee. It was also decided to have a banquet and to write to some of the Carnation specialists to have them exhibit their new Carnations for the benefit of those members who were not fortunate enough to attend the A. C. S. show at Pittsburgh.

At the earnest solicitation of the committee Mr. Slattery held his paper for the night of the election of officers, to be put on as an added attraction; this paper has been the talk of the local florists for the past six months, and as it deals with color harmony from a florist's viewpoint, it will make a very interesting subject. As Mr. Slattery has had some of the biggest decorations in this section he will be able to explain some of the color effects used to advantage in his own work. The committee will have a great night's entertainment to furnish the club members, so everybody had better put off all other engagements for that night and attend in order not to miss any of the good things. Remember the date, Tuesday, March 1. W. H. GREVER.

NENIA. O.—Robert Swaby, florist at the O. S. and S. O. Home is seriously ill from an unknown trouble.

ALLIANCE. O.—The Lamborn Floral Co. contemplates an enlargement and improvements to its plant in the near future.

Margaret Anglin a Florist

According to the Chicago Journal Miss Margaret Anglin, the well-known actress, is a partner of Mrs. Otis Howard, formerly wife of George S. McReynolds, in her Violet growing establishment at Glencoe, near Chicago. The partners propose to considerably enlarge the greenhouse area of the establishment in the near future.

A Rack Containing 150 *Phalenopsis grandiflora*, Imported by the MacRorie-McLaren Co., San Francisco, Cal.

BY EBER HOLMES

More Water and Food for the Plants

As the days lengthen and the sun gets stronger it is well to remember that the Rose plants require more water and food to get the best results from them. This will be true in nearly all cases, but more especially where the plants are large and strong, and more than one year old. In many cases the young, white feeding roots will be showing on top of the ground, and these should be carefully covered with a top-dressing of manure. If this is not available at present from outdoors, a covering lightly with sleep manure (pulverized) followed by a similar coat of loam will carry the plants along until a more bulky covering can be procured and applied. For the present it is enough to protect the young roots, which are liable to get washed bare with the successive waterings; but very soon a heavier coat will be needed.

It is seldom that Roses suffer from overwatering after the first of February, if the drainage in the beds is what it should be, and if reasonable care is used in the work. More harm is done by using too little water in many cases.

Prevention of "Roasting"

The beginner in Rose culture should know also that after the very cold nights that we often get at this time the fires should be banked at the earliest possible moment, and that previous to this the number of pipes in the houses should be reduced to a minimum before the bright sun gets on the houses strong enough to run up the temperature too high.

All the troubles which are likely to come in the Springtime, such as red spider, mildew and small flowers, will be encouraged and invited by the roasting process, which some houses get and which is so easy to avoid if the right thing is done at the right time. Never go to extremes, always anticipate every change and meet it half way and you will be surprised to find how much easier it is to do things right than to be continually doing them wrong, and much more profitable.

Ventilation and Prevention of Mildew

Ventilation is a thing that worries the beginner, perhaps, as much as any other one thing. It is a safe plan to carry a little air whenever possible, increasing it as occasion demands, a little at a time. A little sulphur mixed with water and painted on the pipes will keep down mildew. If lime is added, in about the same proportion as for whitewash, it will stick better. Or, the sulphur may be mixed with lincsed oil and painted in patches on the pipes; in this case it will last for weeks without having to be renewed, but the smell is disagreeable, although harmless to the plants. The question was asked me a short time ago if it was not very dangerous to paint sulphur on steam pipes. It is not dangerous in the sense that burning sulphur in a pan over a flame is. I have seen a few old leaves drop off bushes as the result of sulphur fumes from steam pipes, but have never seen any serious harm result from it. One or two 1 1/4-in. steam pipes painted thinly the full length of a house 25 to 35 ft. wide, and more pipes as the width increases, will give good results and do no harm.

Prevention of Green Fly

We find that it is much easier to keep green fly from making its appearance than it is to get rid of it after it gets established, and fumigation as a preventive is really more of a success than as a cure, although, of course, it is good for both. If you must spend money on a green fly destroyer, why not use it before the fly has spoiled the value of any of your flowers? You will always notice that the man who has the healthiest stock has also the cleanest. Every disease that the plants are heir to will attack a sickly lot of plants before they will touch a lot of healthy ones.

Careful Selection of Stock for Propagation

As this is the time when propagation is in full swing it is well to remember that careful selection of stock pays every time. The best is none too good in these days of sharp competition, and while a skillful grower can take a poor cutting and turn out a better plant than others can out of a better cutting it is not fair to the grower to expect him to start with that handicap. Nor is it policy for any owner to plant second rate stock on his place. It costs no more to care for good stock for a year than for poor, and when the difference in first cost is so trifling it is surely folly to attempt it.

Treatment for the Richmond Rose

There have been remarks made for the past year about the Rose Richmond deteriorating, and some growers are reported as ready to drop it. I do not believe that this Rose is in as bad shape as some people think. We have nothing in sight with which to replace it. If grafted, nothing but flowering wood should be used, and the earlier the plants are grafted the better the results will be. It is also advisable to keep the temperature around 60° at night for this Rose. It will be remembered by many that when this Rose was first introduced some of the men who grew it most successfully and profitably grew it on its own roots, and I think it possible that this is the better way to grow it. I have seen during this Winter several hedges of own root plants which were very small last Fall and were planted late, but which have done remarkably well.

After the first year I think that own root plants are preferable to grafted ones, and for results the first year with own root plants you must get an early start, and plant early. Of course, if you have a dozen houses you can plant some early and others later, but for the best

results the following Winter after planting there is nothing like early planting of good stock.

Selection of Varieties

The doom of that good old Rose Bridesmaid seems to be sealed, around Boston; it is almost impossible to sell the flowers, and it is probable that most of the stock planted last year will be thrown out and replaced this Summer with other varieties. Our experience has been that while it is very interesting to grow a variety of roses, it is more profitable to confine oneself to a few standard varieties, and grow them in quantity. There is, of course, always a call for novelties, and when a man gets a good thing pretty much to himself there is money in it, but this is somewhat of a lottery and must of necessity be confined to the large growers. If they lose a house they can stand it, and generally have something else ready to succeed a possible failure, and when they get a new kind which is a success it helps to balance their previous losses. By all means let us have new kinds, and do everything in our power to advance the popularity of the Rose.

Care of Young Plants

I have omitted any remarks on the care of the young plants or cuttings, as they have been made so often, but for the beginner, who is always with us, perhaps it may be wise to repeat them. Never allow the cuttings to wilt at any time. Pound the sand down firmly before inserting the cuttings, water well after insertion and afterwards every day or so as required. Never let the sand get dry; about four inches of sand is a good depth. For grafting see that your case is tight, this is important. Pot the Manetti stock as soon as received and set in a cool house. A north side house is preferable; if this is impossible set them under a bench, or shade from the sun. When they are well rooted and before the tops have started is the time to graft. Never let the scions wilt. As soon as possible after grafting set them in the case and shut down tight. Hang a thermometer in the case in such a way that it can be seen from the outside. Around 75° is the best temperature for the case, and we have had better results with four inches of ashes on the bottom of the case than with two or less. The larger depth holds the moisture better. Do not open the case for the first five days, after that you may gradually admit air and then carefully increase it a little at a time every other day. Be careful not to get the water in the cut before the union of stock and scion is complete. The raffia for tying the grafts should be cut into lengths and split into the proper thickness by the help before being needed for use. If it is used too thick and tied too tightly in a hard knot it will probably have to be cut away as the plants grow. Use just enough to bind the two parts firmly together, and pass the loose end underneath the last roll and draw tight, and it will rot away and work loose as the plants grow, and will seldom need to be cut away.

W. Atlee Burpee & Co.'s "Annual"

Your flattering reference to Burpee's Annual is well deserved, for there is no questioning the fact that W. A. B. has a style all his own. The list is well printed, and the color work is far ahead of the general run of such work done over here. Many of the color prints in seed lists are ghastly daubs or else ultra flattering. There is just one point where W. A. B. and many other U. S. A. firms fall short of our best catalogs and this is with regard to halftone engravings. Burpee's Annual contains not a few halftones, but the quality of the paper used, and the firm's strong position, warrants a great many more such illustrations.

T. A. W.

An Importation of Four Thousand *Phalenopsis grandiflora*, Received by the MacRorie-McLaren Co. of San Francisco, the Last Week in December, 1909

Albert G. Fiedler & Co. of Baltimore, Md., who send us the Price List herewith reproduced, say. "The inclosed circular needs no explanation on our part. * * * We just send you the same to show you what the large department stores are beginning to do in our city; no retailer can meet such prices."

Some of the Crosses in the Life of
the Retail Florist

[We urge that no attempt be made to meet these prices advertised by the department store. The remedy lies in handling superior stock and in more adroit salesmanship. The efforts of the department store tend to make new customers in the business, and the patronage of such will gradually come to the florist as they learn to distinguish poor from good. But these results cannot be brought about, unless your firm does some bright advertising on its own account.—Ed.]

Wax Brothers' Store at Boston

This short story is to show what can be accomplished in a few years by those who attend strictly to business and do business in the right way.

Samuel and Martin Wax began business back about fifteen years ago at 20½ Temple place. The size of their store then was 3 ft. wide and 25 ft. long. It was the smallest retail store in Boston and was known to the trade as "The Hole in the Wall." They are located today on one of the busiest and best business streets in the city at 143 Tremont, where they have been for the past twelve years. Their store is one of the most up-to-date in the city and they believe in spending money to get the latest and best equipment wherewith to carry on their increasing business. Only last Summer they spent \$10,000 in improving their store, which now has a frontage of 27 ft. and runs back 25 ft., having two large handsome show windows. The walls in the interior are decorated with large mirrors and the shelving and tables are of white marble and glass. On the left as one enters visitors are attracted by a large handsome ice-chest, which is 10 ft. long, 4 ft. wide and 8 ft. high; the sides and ends are of the finest of glass and, at the time of my visit, the chest was brimful of the choicest flowers. In the rear is a large office with three telephones.

Exterior View of the Retail Store of Wax Bros., Boston, Mass.

When I called there were so many people admiring the flowers in the windows that I hardly could get near them to take a few notes. On a street where there are many people passing to and fro it pays well to spend some time on decorating the show windows. Certainly Wax Brothers have an eye for the beautiful and also possess a knack for artistic arrangement. Their windows were splendidly set up and contained the following choice things: Cattleyas, Lælias, Cypripediums, Gardenias, Roses, Lily of the Valley, Daffodils and Freesias. Very noticeable was a fine vase of the new Rose, Mrs. Aaron Ward.

The basement of their store is well worthy of inspection; it covers a space of 55 ft. by 27 ft. It also has a large refrigerator measuring 18 ft. by 5 ft. and, on the left, is a nicely furnished private office. In the basement is stored all sorts of goods required in their business.

Their specialties are Orchids, Roses and Violets, but they also carry the very highest grades of all kinds of flowers.

R. C.

The Boston Retailers

Hoffman's store, which is on the corner of Mass. ave. and Boylston st., is always attractive. His show windows are always artistically arranged and the way the

material is put up shows that Mr. Hoffman is full of original ideas. He has a splendid open front to his store and his windows are shown off to the very best advantage. He has invariably a nice lot of well-grown Box trees, Bay trees or coniferous plants, arranged effectively outside his entrance. Inside, the store is most conveniently arranged with ample room. Hoffman carries the very highest grades of flowers. At the time of our visit he had the best of Elliott's Roses and the pick of Sim's Sweet Peas in his ice chests. His pot plants are all grown at his own range of greenhouses at Mount Auburn. We saw a nice lot of Primula Kewensis, in five-inch pots, which was well grown. This plant looks better in this size pot, with four or five flower stems, than in larger sizes of pots. Sydney Hoffman is probably the youngest of the retail florists; he is full of vigor and enthusiasm and a hustler. He is pleasingly located and is doing a thriving business.

Carbone is an artist and one can invariably get new ideas by spending a few minutes examining his windows. Last week he had a lovely Spring display of Prunus, Pussy Willows, Lilacs, and other early Spring flowers. This week one of his windows is made up entirely of well-grown Camellias, about 4 ft. in height and very well flowered. They are arranged with telling effect. There is quite a demand now for these plants when well grown and nicely flowered.

Interior View of the Retail Store of Wax Bros., Boston, Mass.

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, Departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres

DAYTON, OHIO
Florist, 16 West Third Street
Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

The Park Floral Co.
DENVER, COLORADO
1706 Broadway
J. A. VALENTINE, Prest. Orders by wire or mail carefully filled; usual discounts allowed. COLORADO, UTAH, WESTERN NEBRASKA and WYOMING points reached by express.

Newman's window was displaying some fine flowering bulbous stock, such as Freesias, Lily of the Valley, Daffodils and Jonquils.

This week Edward MacMullikin's store window is made up of very handsome Cattleyas and other flowers of nearly that shade; the arrangement and the color effects with the other plants and flowers is very cleverly done.

Doyle has some nice vases of Acacia Drummondii in his Boylston st. window. It's too bad this lovely Acacia is so scarce; its soft yellow flowers are so pleasing and effective at this season.

Galvia's store on Tremont st. has the best Orchid display. Dendrobiums, Cattleyas and Cypripediums are the principal kinds. In the opposite window is an effective arrangement with small Araucarias and well-grown and beautifully colored Crotons. Later in the week one of the windows was given over to a handsome display of old-fashioned bouquets, which seemed to attract the public greatly. A bouquet made up of Dendrobium nobile, with green foliage and other delicate flowers, was very pleasing.

The attraction in Zinn's window on Park st. this week was a vase of Bird of Paradise flower (Strelitzia Reginae). There was no name to the flowers and we heard quite a number of inquiries as to what the curious flowers were. We suggest that it would be a wise thing to have all flowers in the florists' windows correctly labeled in a good legible hand. It makes the display more interesting and educates the public; people can talk so much more intelligently of what they see in the windows if the names are given.

Conley's store on Park st. is interesting because he has always some novelties. In his window this week is a large vase of Dimorphanthea aurantiaca. This South African plant attracts much attention and Mr. Conley says that people seem to like it. Probably the worst fault this genus has is that the flowers of all the species close up at night. R. C.

All advertisers in this column are provided with Arnold's Florists' Telegraph Code No. 19

A Practical Basket

Arrangement and photo by Fred K. Leary, Philadelphia.

As can be seen by the illustration, the formation of this basket is very appropriate for the arrangement of almost any kind of plant, and will lend unusual value and character to blooming plants, such as Hydrangeas, Azaleas, etc., at Easter time. The plant here arranged is an Aucuba, with a sash of scarlet ribbon drawn through it, which changes its entire appearance, and at once doubles its commercial value.

The practical part of the basket is that no time is lost in the dressing, for it only remains to place the plant in the basket and the work is finished.

John Brattmeyer's Sons

DETROIT, MICH.
Broadway and Grafton Ave.
We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

Bertermann Bros. Co.

INDIANAPOLIS, IND.

Sievers Floral Company

70 Geary Street
SAN FRANCISCO, CAL.
"Choicest of Flowers Always on Hand."

Pittsfield, Mass.

On Feb. 1 The Flower Shop opened for business at 40 Fenn st. The store is located in the annex of the new Agricultural Bank Building and is thoroughly modern and up-to-date; it extends from Fenn st. through the block to Dunham st., thus allowing two entrances each on a prominent thoroughfare, and one window each side of each entrance. The store was decorated with southern Smilax and the usual large Palms and Ferns, which blended well with the green and white finish of the walls and ceiling and the Mission furnishings. Many visitors were present, all of whom were much pleased with the new shop and expressed the opinion that it is just what Pittsfield has needed—a place where first quality goods could be obtained with the corresponding finishing touches. The Shop aims to carry only first quality goods and to cater to a trade which will appreciate such. Stanley E. Barnes, who has been with Chas. Limmer of Schenectady, is managing the store for the present, while his partner, Robt. L. Smith, also of Schenectady, will remain at his present place for a time. Trade has started in very good and conditions look favorable for its continuance. B. G. S.

The Florists' Exchange Design Book.

Have you seen a copy of this valuable assistant to all who have to do with "make-up" pieces. It is highly recommended by all who have seen it. Third edition ready. See advt.

CLASSIFIED ADVERTISEMENTS

Notes

ASHLAND, KY.—Wm. H. Carp reports business latterly as being very satisfactory with him.

GRAND VIEW, WIS.—W. L. Scott, florist, has suffered a third stroke of paralysis and is in a very critical condition.

MARYSVILLE, CAL.—J. W. Evans Jr has leased the Karr property on F st. for nursery and greenhouse purposes, and will shortly erect a large greenhouse.

WASHINGTON, PA.—Cassius A. Dunn purchased, Feb. 2, at receiver's sale the florist establishment of Joseph H. Seaman & Co., and will in future conduct the business.

COLUMBIA CITY, IND.—D. C. Noble has re-purchased the greenhouses sold by him last August to Lancaster & Simpson of East Liverpool, O. Mr. Lancaster, who conducted the business found the florist trade did not agree with him.

KNOXVILLE, TENN.—J. J. Reaser of Nashville has been appointed superintendent of the agricultural and horticultural departments of the forthcoming Appalachian Exposition. He will make a tour of the entire Appalachian region to secure exhibitors.

CHAMPAIGN, ILL.—F. C. Granois, a senior this year in the College of Agriculture, has built a greenhouse, and demonstrated that it can be operated well within the financial resources of an average township high school. Mr. Grannis has had considerable practical experience and is well qualified to do such work as this.

Fires

CANTON, O.—Fire was discovered about 6:30 p.m. the 26th of January in the Lamborn Flower Store, which worked considerable havoc among the tenants of that building. The block is owned by LeRoy L. Lamborn, who was in Pittsburgh at the time of the fire.

We Are Not Worrying Yet

At this time of year flowers from the sunny Riviera penetrate almost throughout Europe, says "The Field." Violets, Anemones, Ranunculus, and Mimosa are all abundant in our principal cities, and as a special train brings up flowers in splendidly fresh condition it is easy to understand that the production of forced blooms does not offer very good prospects in northern France. The Riviera growers are well organized and very enterprising. They lately held a conference which decided to experiment with cold storage railway wagons in the hope of delivering their flowers perfectly fresh in the most distant markets. It is claimed that it would be possible to maintain them in good condition for twenty-five days, and this has caused those American growers who obtain phenomenal prices for their winter flowers to consider whether even across the Atlantic foreign competition in the future is to be feared. Violets are now being retailed at a halfpenny a bunch of fifty in Marseilles, while in New York or Boston a similar bunch realizes from half a dollar to a dollar. Were cut flowers imported into the United States markets the home growers would be forced to seek shelter behind a still higher tariff than they have now.

PREPARE FOR EASTER HEADQUARTERS FOR EASTER PLANTS

AZALEA Indica. We carry the largest stock of this so well favored Easter novelty, of our own importation.

All of our plants are in perfect condition, full of buds, just right for Easter.

In large-sized plants we have the following varieties: **Bernard Andrea alba** (double white); **Niobe** (double white); **Helena Tellman** (light pink); **Memory de Van Houtte** (large double red flowers); **Empress of India** (double variegated); **Dr. Moore** (pink); **Mme. Van der Cruyssen** (one of the best double pink; we have a house full of this); **Apollo** (red); **Schreversiana** (double variegated); 16, 18, 20, 22 to 25 in., \$1.25, \$1.60, \$1.75, \$2.00 to \$3.00 each.

In smaller sizes, we have **Mme. Van der Cruyssen**, **Deutsche Perle** (double white); **Vervaeana** (double variegated); **Niobe**, **Empress of India**, **Apollo**, **Simon Martner** (double pink), 50c., 75c., \$1.00, \$1.25.

LILIUM Multiflorum. Have three houses full, raised from 5-10 bulbs; were never as nice as this year. 6-in. pots, showing buds now, 10c. per bud.

CINERARIA Hybrida, 6-in. pots, 25c., 35c. to 50c.; 5-in., 20c.; 4-in., 10c.

SPIRAEA Gladstone. Of our own importation, 6-in., in bud, 50c., 75c. to \$1.00.

HYDRANGEA Otaka. Can't be beat in foliage and otherwise, 6, 7-in. pots, 50c., 75c., \$1.00, \$1.25 to \$1.60; 5½-in., 25c. to 30c. each.

BULBOUS STOCK. By the ten thousand. All now outside covered with leaves in cold frames. Will bloom in three weeks after bringing them into the greenhouse.

HYACINTHS, King of the Blues, Grand Maitre (light blue), **La Gracieuse** (pure white), **Gertrude** (pink), all of our own importation, \$12.00 per 100.

TULIPS, Murillo and Tournesol (best double variegated red and yellow), three bulbs planted in one pot, \$15.00 per 100 pots.

NARCISSUS, Von Sion and Double Daffodils, three double nosed bulbs planted in a 6-in. pot. This is the best double Narcissus in existence, \$2.50 to \$3.00 per dozen pots.

COCOS Weddelliana, 3-in., 12 to 15 in. high, 15c. to 18c.

ARECA Intensea, 5-in., 35c.

LATANIA Borbonica, 4-in., 20c.

NEPHROLEPIS Whitmanii N. Todeoides, 5-5½ in. pots, 35c., 40c. and 50c. each; 7-in., as big as a washtub, 75c. to \$1.00 each. Two houses full. All pot grown.

KENTIA Forsteriana, 7-in. pots, single, 40-45-50 in. high, \$2.00, \$2.50 to \$3.00; 6-in. pots, single, 25-30-35 in. high, \$1.00, \$1.25, \$1.50 to \$1.75.

KENTIA Belmoreana, 4-in., 25c.

PTERIS Victoriae, (silver Fern), 6-in. pans, 3 ferns in a pan, very attractive, 30c. per pan.

Cash with order, please. Mention if pots are wanted. All goods must travel at purchaser's risk only.

F. E.—The Best Advertising Medium

LEXINGTON, KY.—The **Jonah Pottery Co.**, a Michigan corporation, filed suit in Circuit Court Saturday against **S. S. Kelly** of this city for \$135, which plaintiff says is due for goods, wares and merchandise sold and delivered to plaintiff during the year 1909.

Orange, N. J.

A blaze, which for a time threatened to destroy the entire greenhouse plant of **Frederic C. Read**, 18 Chapel st., Orange, occurred late in the afternoon of Jan. 30, causing damage estimated at about \$1000 before the firemen got the flames under control. Mr. Read was away at the time and the origin of the fire is not known. It is believed, however, that some inflammable material near the furnace, caught fire, as the blaze evidently started in the room where the heating plant is located. Many plants were destroyed, and all loss will have to be borne by Mr. Read, as there was no insurance.

Rochester, N. Y.

The condition of trade here leaves very little to be said as things are not changed much from those of last week. Business lacks snap to it, and no great demand for any kind of stock is in evidence. With the Lenten season upon us it is very doubtful if matters will improve for a few weeks. The extremely cold weather experienced last week put a damper on Saturday's business. Bulbous stock which sold so well at the beginning of the season is now a glut on the market, and almost impossible to move at a figure that will pay the grower; in fact, from the experience of the past few years it would seem that the man who lets it alone is much better off than if he disposes of his output in a wholesale way.

Carnations are still plentiful and the stock of fair quality. However, from continued dark weather many varieties are throwing weak stems, which are undesirable for use as cut flowers and vase work.

Violets are selling much better and will no doubt be in demand from now on till Easter. Through the absence of funeral work **Lily of the Valley** and **Lilies** do not sell. Some exceptionally fine **Sweet Peas** are coming in, which sell readily at \$1 per 100. Roses are not over plentiful in the better grades, and run in price from 6c. to 20c.

On Thursday evening the **Bowling Club** made its first appearance on the alleys. About twenty members assembled, and while no high scores were made all united in saying they had almost enjoyable evening. Chairman **A. F. Vick** of the bowling committee, and **H. B. Weller**, were untiring in their efforts to get everybody interested, and it may be said their efforts were not in vain. Messrs. **Darling**, **Wilson**, **Schlegel**, **Tickner**, **Chas. H. Vick**, **A. F. Vick**, **Hart**, **Weller** and **Dukelon** all demonstrated they were not novices at the game like many of us, and will from the present outlook do some bowling. The regular monthly meeting of the Association takes place Monday, Feb. 14. Three trustees will be elected at this meeting and a good attendance is desired. A banquet is in the air and is being looked forward to by many of the members. Ladies will be invited to the banquet this year.

H. B. STRINGER.

Horticultural Soc. of Newport, R. I.

There was a good attendance of the members of this Society present at the meeting on Tuesday evening to hear the reading of the papers on Exhibitions and to take part in the discussions which followed which were all of a lively good natured order. Among other things it was brought out that what the Society stands most in need of at the present time is a hall large enough in which to hold its exhibitions. The school gardens and the plan of encouraging the children to take part in the competition at the Society's exhibitions, was discussed favorably. What appears to be most needed is a capable instructor to take charge of this work, if the children are to be taught according to the best methods.

Among those who took part in the discussions were **Andrew K. McMahon**, **Dudley E. Campbell**, **William Folk** of the **R. I. Agrl. College**, **Col. Herbert Bliss**, **Daniel J. Coughlin**, **James J. Sullivan**, **Bruce Butterton**, **John P. Hammond** and **Richard Gardner**.

Refreshments, an aftermath from the anniversary dinner, were served and helped to round out one of the best meetings that the Society has ever held.

A large delegation of the craft are planning to attend the **R. I. Hort. Society's** annual dinner in Providence, Wednesday evening, Feb. 16.

ALEX. MACLELLAN.

Seasonable Stock Ready

Rooted Cuttings of Carnations

I. M. RAYNER, Greenport, N.Y.

Please mention the Exchange when writing.

Advices received from many sources would seem to indicate that, owing to the drought of last Summer and early Autumn, good Carnation cuttings are in shorter supply than they have been for a number of seasons.

SPECIAL OFFER

We will give one copy Plant Culture and The Florist's Exchange two years, all for \$3.00.

Plant Culture

NEW, THOROUGHLY REVISED EDITION. JUST PUBLISHED

By Geo. W. Oliver, Propagator to the Bureau of Plant Industry, U. S. Department of Agriculture

Printed on enamelled paper and illustrated with one hundred plates and engravings. Strongly bound, 12 mo., cloth. By mail postpaid, \$1.50

A WORKING handbook of every day practice for the Florist and Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experience of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines and a chapter of General Directions, covering Propagation, Seeds, Grafting, Hybridization, etc.

This reliable cultural work has been gotten up for use, not ornament; therefore the price has been fixed at a figure within the reach of all. It contains more real practical information for those for whom it is intended than is found in much more pretentious works.

Send for sample pages, free.

A. T. DE LA MARE PRINTING AND PUBLISHING CO., Ltd.
Offices, 2 to 8 Duane Street, N. Y. Address P. O. Box 1697, New York City

and energy that has been spent and wasted by many hybridizers in not understanding the laws of heredity.

The lecture as a whole was an explanation of the laws of Mendelism. The question of breeding plants and animals so as to improve the type, and permanently fix desirable characteristics has always been a matter of great concern both to horticulturists and agriculturists. Practically nothing was known as to the principles which underlie and determine the results of hybridization until an Austrian monk, Gregor Mendel, worked out his ideas some fifty years ago. Mendel gave most of his attention to the hybridization of varieties of Peas, and it was from his observations as to the manner in which certain definite characteristics were transmitted to succeeding generations that he was able to announce a theory of heredity which has been applied with encouraging success to the making of improved varieties of plants.

Mr. Brainerd has been carrying on his experiments mostly with Violets and the results he has obtained are perfectly wonderful.

In the Orchid Review for January there is an able article on "A Practical Aspect of Mendelism," and we see therein that others were at work on Peas long before Mendel. As far back as 1822 a paper was read before the Horticultural Society of London by a Mr. John Goss, entitled "On the Variation of the Color of Peas Occasioned by Cross-Impregnation." This article in the Orchid Review is well worthy of perusal by those seeking light on this subject.

It was announced that the lecture by Dr. Hermann Von Shrenk of St. Louis, on "Some Practical Results of Investigation of Diseases of Trees or Structures of Timber," would not be given as Dr. Von Shrenk could not be present. So there will be no lecture Feb. 12.

Six well grown plants of Cineraria were exhibited by William Whitman, Esq., Brookline (Martin Sullivan, gdr.), at Hort. Hall on Feb. 5.

Pittsburgh (Pa.) Florists' Club

The February meeting of the Florists' Club was a most interesting one and the attendance was very large. It was to be Carnation night, with an exhibition of cut blooms, but the blooms were not forthcoming; likely everybody had their fill of Carnations the week previous. The plant display was very creditable and made by private gardeners. Two new members were proposed and two elected to membership. The auditing committee was too busy the past week to go over the secretary's books and will report at the next meeting. A vote of thanks was tendered to the H. J. Heinz Co. for their entertainment of the visitors and home people at the convention, also to all members of committee for their splendid work in making the convention a success, and to Wm. Falconer who pleased everybody as toastmaster at the banquet. Mr. Becker of Dumont showed Primula Kewensis and other sorts, also a plant new to many, Saintpaulia ionantha grandiflora atroviolacea, a rather long name, but a beautiful blue flower, violet shaped. He also showed a new Cineraria, Mateador, of good color but a poor grower. D. Frazer and J. Wiseman showed Primula Kewensis and other sorts. Frank Crook exhibited fine plants of Cypridium Lecanum. Julius Roehrs Co. through its representative, Mr. Mueller showed a few cut blooms of Cypridium.

The president appointed Harry Bunyard and J. Jones as judges of the display and the awards follow: Primula sinensis, cultural certificate. Primula Kewensis, cultural comment. Cyclamen, first prize to D. Frazer, second to F. Crook. Cypridium, cultural certificate, and the same to Saintpaulia. Cineraria Mateador, honorable mention. Mr. Becker took second prize on cut bloom Carnations. Julius Roehrs' Cypridium was highly commended. Fred Burki gave quite a talk on Carnations [This will be found in another column, headed "Fred Burki on Carnations."]. All the committees who had charge of matters at the meeting of the American Carnation Society reported favorably. The Finance Committee reported that a nice balance was left over, something that was not looked for as no expense was saved to make the affair a success.

The next meeting will be devoted to bulbous plants, and to the regular schedule of the private gardeners for competition was added 3 pots each of Hyacinths and Tulips in 7-in. pans.—E. C. R.

BULBS AND THEIR CULTIVATION

By T. W. SANDERS, F. L. S., F. R. H. S. Crown 8vo., Cloth, 212 pages, 42 illus.

Yonkers (N. Y.) Hort. Society

A very interesting event in Yonkers on January 28, was the inauguration of a horticultural society under the above title. It has long been felt that the time was ripe for such a society to be formed and it only needed someone to make the initial start. That the efforts of the promoters were a decided success was shown by the fact that nearly sixty members were enrolled. The first meeting was a very enthusiastic one. The following officers were elected: President, E. Bennett, superintendent, W. B. Thompson; vice-president, R. Cochrane, head gardener on the Ewing Estate; secretary, W. H. Waite, of Greystone; cor. sec., Lee Whitman; treasurer, Peter Macdonald, florist. The executive committee is composed of H. Scott, J. Goff, T. Mahoney, R. Cummings, L. Taylor and A. Macdonald.

That the Society will be a success there can be no doubt with such men as President E. Bennett and Secretary W. H. Waite at the head, both having had large experience in such societies, and all the other officers and the members of the executive committee being good live men and hustlers.

LEE WHITMAN, Cor. Sec.

Massachusetts Horticultural Society

The lecture on Saturday, Feb. 5, entitled "How New Races of Plants Arise through Hybridization," by Ezra Brainerd of Middlebury, Vt., proved to be especially interesting. It was a hard subject to handle but with stereopticon pictures and lucid explanations Mr. Brainerd kept his audience intensely engrossed throughout. The lecture was of special value to those who are trying to raise new varieties and new races of plants through hybridization. Those who are interested in these lines and who did not attend the lecture missed a great treat. The lecturer pointed out the time

PALMS And Other Seasonable Stock

We have an extra good stock of Forsteriana, made up, three plants in a pot or tub, all clean, perfect plants. We need to reduce our Palm stock, and are giving extra value.

F. E.—The Best Advertising Medium

Milwaukee

Carnations for McKinley Day

There was quite an increased demand for Carnations for McKinley Day over last year. This is perhaps due to the publicity given now this day by the newspapers throughout the country. Our local papers made mention of this fully ten days in advance of the date and, on McKinley's birthday, two of our daily papers had McKinley's picture and also illustrated a Carnation in two color work, red and green, which naturally created a heavy demand for red, as the public generally supposed red was McKinley's favorite flower. As this is a patriotic movement most of our retailers sold Carnations at 5c., and the wholesale price did not exceed \$3 per 100, although a little more could have been realized had they felt inclined to push up the price, for some of the best colored stock was sold out early in the day. It would not do to advance the price for Carnations on McKinley Day, as it would but create criticism among the public if they were obliged to pay more than 5c. for a flower.

Business Unusually Brisk

Business the past week has been unusually brisk, owing to an abnormal amount of funeral work which created a heavy demand for flowers in light colors of all descriptions. Roses were very scarce for quite a while, but are coming in more plentifully and, therefore, these as well as Carnations were equal to the demand. The shipping trade likewise was very good, making it one of the best weeks of the year so far. There also was quite a quantity of Lilies coming in as well as Tulips, Daffodils, Valley, Frezias, Violets, Sweet Peas and Romans, which all found a ready market. Stevia has been coming in quite heavy all through January and the last cut of this season reached the market Saturday. The late crop brought considerably better returns than the earlier cut. There was plenty of green goods to meet all requirements.

Milwaukee Florists' Club

The Florists' Club had quite a largely attended meeting, Thursday, Feb. 3, and as it was voted at the January meeting to suspend the initiation fees so as to get in more new members, the idea being to get in a number of the greenhouse employees, quite a few new men were initiated that evening. The Club also has in circulation the guarantee fund subscription list for the next Fall show which is being freely signed by all the members, and there is now every assurance of our having an exhibition on a very large scale at that time.

Members of the Florists' Club felt quite disappointed in not getting the A. C. S. meeting for next season. The Club had felt very confident the meeting would come to Milwaukee.

Alex Klokner, vice-president of the Club, who recently made a trip to the Pacific Coast, writes he is now sojourning in Mexico and wearing a straw hat and a summer suit, quite a contrast to his home surroundings at Wauwatosa, where the snow at the present time is several feet high. C. C. POLLWORTH.

St. Louis

The Diemer Floral Co. of South St. Louis last week suffered the loss of the head of the firm, Mr. E. K. Diemer, who died after a long illness. The funeral took place on Friday, Feb. 4, from 1805 South Broadway. Mr. Diemer was 39 years old and leaves a wife and young son who will continue the business.

William Trelease of Shaw's Garden delivered a lecture on "How to make the City more Beautiful," before the Southside Self Culture Club, at its meeting last week.

Mr. George Walbart reports that he bought the leasehold and greenhouses of the late Michel Plant & Bulb Co. for \$6500 cash, last week; the sale took place at the Court House. The lease has 10 years to run. Mr. Walbart says he will stock up the place and run it in conjunction with his store on Grand ave. With this sale passes away the name of one of the oldest floral establishments in the city.

Miss Matilda Meinhardt, who was on a visit to Mrs. W. J. Vesey at Fort Wayne, visited Chicago before returning home Feb. 10. The Ladies' Home Circle will hold their meeting on Monday, Feb. 14, in the Washington Hotel, at 2

F. E. — Alive and Up-to-Date

o'clock; Miss Meinhardt will send out notices to all the members and S. A. F. ladies.

Adolph Brix reports that he has sold his greenhouse plant on Mead ave. to his foreman, Mr. J. Michel; the sale took place last week; Mr. Brix will continue his retail store at 1518 St. Louis ave.

The Katerman Floral Co., doing business at 5415 Easton ave., sold their place recently to the Volkman Nurseries, who will continue the business.

Quite a few in the trade have been reported on the sick list last week. Among them were John Connon of the Connon Floral Co., John Barnard with Grimm & Gorley, and Carl Beyer. From last reports all are doing well.

Harry Young is now treasurer of the St. Louis Hort. Society and Fred H. Weber a member of the executive board; they succeeded Fred C. Weber, who resigned from both offices last week.

The Florists' Bowling Club has its weekly bowling every Monday night at the alley at Dehner and Sarah sts. Wm. C. Smith, the secretary, resigned his office in favor of Wm. Young, Jr., who was elected. Florists wishing to have a good time should call at the alleys any Monday night. St. PATRICK.

Indianapolis

A large vase of Hoosier Lad, the gold medal winner at Pittsburgh, proved an attraction in Bertermann Bros.' window last week. This seedling of Dornier's, together with several others, were artistically arranged and carded as duplicates of the winners at the National exhibition.

The State Florists' Association of Indiana held its February meeting at the State house, Feb. 8. A large attendance was present, and there were a number of interesting topics up.

A. Wiegand & Sons have an attractive window this week, consisting of seasonable plants and Spring flowers.

Baur & Smith are sending in a heavy cut of Carnations.

Mr. Geo. L. Huscroft was a visitor for Hagemann & Co.

St. Valentine's Day promises to be a particularly busy one, and extensive preparations are being made to take care of a holiday which, each year, means more for the florist, it being a time when flowers are peculiarly appropriate.

John Bertermann spent a day with the Richmond florists recently.

E. B. Knickman and Aug. Rolker visited the trade in this vicinity; both of them report an unusual business.

Tomlinson Hall Market is again taking on a more cheerful aspect as more potted plants are being displayed; both wholesale and retail sales are quite up to the standard.

Wm. Schwatke spent Sunday with friends in this city.

Herman Junge is anxiously awaiting Spring. He has a new beehive which it takes thawed bees and warm weather to demonstrate. I. B.

Kalamazoo

With a return to bright cheerful weather transient business again starts up especially with florists in the suburban districts who report quite lively trade among pot plants of the moderate priced sorts.

With the storekeepers business has been most satisfactory right along as numerous social affairs have made brisk demands on them steadily. Funeral work has also been good; although no particularly large designs have been in evidence, plenty of medium price ones have been sold.

Shipping trade has been excellent for many weeks at prices near the Chicago quotations. This latter business is one of the chief means of support of the Kalamazoo florists, and thousands of dollars worth of flowers are shipped away monthly to all parts of the Middle West.

Pot plants of the Spring blooming types now have a ready sale among people of the moderate means class, and it is astonishing to note the great increase of this business from that of a few years ago. However, this line does not interfere with the cut flower sales which are as popular as ever at the old prices, viz.: Roses, Am. Beauty, \$3 to \$6 per doz.; Teas, 75c. to \$1.50. Carnations, 50c., 60c. and 75c. Violets, 25c. to 50c. per bunch. Sweet Peas, 25c. per bunch. Bulb stock, 50c. to 60c. per doz. Callas and Larrish Lilies, 15c. to 20c. each. These have been the average prices at this season for many years, but this year less bargain sales are announced, probably on account of shorter cuts and a good steady shipping trade. S. B.

 Please mention the Exchange when writing.

NEW YORK, February 9.—The condition of the cut flower market is very disappointing, as the outlook a week ago was such that the present slump was unlooked for. Shipments of all varieties of stock have been quite heavy, especially Carnations and bulbous stock. Receipts of Roses have been normal, but the small demand has prevented clearances somewhat, consequently plenty of all varieties are on hand. Bride and Bridesmaid in the No. 1 grades are very weak in stem and efforts to secure fair returns on them have been of no avail but by cutting off part of the stem they have stood a better chance of selling at the lower rate. American Beauty fall to realize more than 50c. each for top grade, and many of the shorter grades are of poor quality.

Carnations are so plentiful that efforts to secure \$2 per 100 for the best flowers meet with no results and the ice boxes of many of the wholesalers are filled to overflowing. Sales of day old flowers have been made in job lots, at 75c. per 100. Many split flowers are to be seen, which are of no practical value when good flowers can be had at retailer's own prices.

Orchids of all kinds have slumped entirely there being no set price on any one variety. Cyripediums especially have become very cheap.

Lilies are plentiful, and at \$8 to \$10 per 100 buyers can secure any amount. Lily of the Valley is of exceptional quality, but has dropped to \$2.50 per 100, for top grade. Violets hold their position a trifle better, but any day may bring about the same conditions on these. A few sales of specials have been made at 75c. but the bulk of stock moves at the 50c. rate. Clearances at 30c. per 100 for the faking are general. Sweet Peas, while gradually increasing in quality, do not advance in price, and the prospect for these is uncertain, as shipments are daily increasing. Prices range from 35c. to \$1 per 100.

Bulbous stock, especially Tulips, is hard to dispose of, and the range of prices on all grades is such that the most exacting buyer can be supplied. Arrivals of Callas are increasing and prices have fallen. Greenery of all kinds moves fairly well, although not with the vim that was noticed a week ago. In fact, the entire market is in one of those dormant conditions which occur about four or five times a year, and something unusual is wanted to create an enthusiasm among the buying public.

PHILADELPHIA, February 7.—Considerable activity prevails in all lines of cut flowers, and a decided shortage is noticeable in small stemmed white Roses. The latter part of last week flowers of every kind were quite plentiful, and a tendency towards lower prices prevailed. The mild weather was a factor which the street men took advantage of, and offerings at low prices were frequently met with.

Short grade American Beauty Roses are arriving of very poor quality and top grade flowers are only in fair demand, at an average price of 60c., other grades ranging from 50c. down. Tea Roses have moved well, and at various prices, ranging from 4c. to 12c. according to color, variety, and quality, with short white Roses in good demand at \$6 per 100.

Carnations are very plentiful, and many sales were made last week near the \$2 mark. Top grade flowers realize \$4, and some extra grade Pink Delight reach \$5. Colored varieties predominate.

Cattleyas have shortened in supply, with demand about equal, and prices for good flowers average 50c. each. Cyripediums are gradually going off crop, and not very much demand is noticed for them. Gardenias are in good supply and range from 75c. to \$3 per dozen. Lilies are quite plentiful and retailers

can name their own price for any quantity, from 8c. up per flower. Lily of the Valley meets with a somewhat cold reception, although good grades realize \$1, the demand is so slight as to cause them to drag. Violets have moved well the last few days, locally grown stock reaching 60c. per 100. Receipts from long distance growers have been somewhat light recently. The average price is 50c. per 100 for top grade.

A general clean up of Narcissus was experienced last week and the price went to \$3 for one day, but good shipments followed, and the price fell again, but there is no great quantity on hand, a fact which commission men are glad of. Tulips are arriving daily in greater numbers and already the question what to do with them has been heard. Many are so short as to be practically worthless. Good stemmed flowers realize \$3 to \$4 per 100, others are jobbed off at any price from \$2 down. First grade Daffodils move well at \$4 to \$5 per 100. Short stemmed material ranges from \$1 to \$3, and is hard to move.

Lilac is apparently the best stock on the market and shipments are cleaned out as fast as received, at \$1 per bunch. Callas move well. Sweet Peas, Freesias, Mignonette and Roman Hyacinths are only called for moderately. Asparagus plumosus nanus is in good demand, the long sprays selling for 50c. per bunch, shorter sprays 25c. per bunch. A Sprenger makes a moderate demand, and more Smilax could be used.

BOSTON, February 8.—Trade has been good and the supply in most lines has been quite plentiful. Roses in some varieties are scarce, most especially Killarneys and American Beauty. The latter, such as are in the market this week, are quite good and are bringing fancy prices. Sweet Peas are getting more plentiful and the quality is much improved; the stems are lengthening out in good shape.

Cattleyas are in good demand, but the supply is not over abundant. Violets are quite plentiful and prices have a downward tendency.

Bulbous material is getting very plentiful and prices are lowering. Carnations are in good demand; Enchantress is the variety most frequently asked for.

Smilax is selling well, and so are bunches of Asparagus, in preference to strings.

Lily of the Valley is bringing good prices and getting more plentiful. Gardenias are still bringing satisfactory prices.

CHICAGO, February 8.—The market has eased up a little both as regards quantity of arrivals and prices of stock, except in the case of Roses, which are still scarce and hold the same stiff prices, and there is no prospect yet of there being any break in the high prices commanded until stock arrives in greater quantity than it has for some weeks.

Carnations are more abundant and prices have decreased somewhat. The best flowers bring 3c. It is hardly expected there will be a surplus stock yet, as Lincoln's Birthday, on the 12th, and St. Valentine's Day on the 14th will call for a great many.

Bulbous stock is also coming along more abundantly, in fine quality and colorings. The prices have taken a decided tumble. Golden Spur Daffodils, that last week moved rapidly at 6c. can be purchased now for 3c.; the same applies to Tulips, prices ranging from 2c. to 4c. for the choicest. Papervite Narcissus and Freesias are getting scarcer, and hold at 3c.

Lilies are coming along nicely, the prices remaining about at last week's quotations. Callas and Lily of the Valley, also Sweet Peas as yet have not shown up in the quantities that were to be found at this season last year. The price has remained the same since they

Valley, Violets, Cattleyas and other Novelties for St. Valentine's Day. The following varieties of SWEET PEAS with 15 inch stems are received daily: Christmas Pink, Florence Denzer, Mrs. Chas. H. Totty, Snowbird, Watchung, Mrs. A. Wallace, Mrs. Wm. Sim, Gov. Fort.

Phones 325-5582-5583 Madison Sq.

51 West 28th Street,
 New York

Please mention the Exchange when writing.

have been on the market. Violets have been coming to the front in the past few days, and while prices have not advanced the demand has increased considerably.

Some extra fine Mignonette is shown, never better, and brings from 4c. to 6c. for best stock. Forget-me-nots and Stocks have made their appearance. Orchids and Gardenias hold their own, the prices on each varies but very little. Nothing in this line is left uncalled for. Greens are plentiful enough to meet all demands, and with the exception of Ferns are excellent. Ferns are coming in a discouraging condition, many having to be gone over on arrival.

INDIANAPOLIS, IND., February 7.—It was more difficult to obtain sufficient good stock than to sell the same during the past week. Counter trade was real lively at times and purchasers generally expected the long stemmed Roses, in particular, of a month previous. Spring flowers of all kinds have had a brisk demand and prices are unusually good. Funeral work has formed a large part of the shopmen's income and has been well distributed. Most beautiful displays are being made in the store windows and should prove beneficial during the present week in attracting the public.

Carnations are certainly in fine form and the people appreciate this fact as there are more sales in proportion than ever before. The general retail figure is 75c. to \$1 per dozen; the wholesale \$3 to \$4 per 100. White is a particular necessity because of its many uses. Enchantress is to be discarded by several of the growers because of its splitting propensities at this period.

Even the large Chicago growers, who are appealed to as a last resort, were unable to fill all orders and the quality received was invariably inferior to what the price should indicate. The two Killarneys and Richmond have been wholesaling at \$10 to \$15 per 100 for the best grades; seconds brought \$6 to \$8, and shorts \$3 to \$4 per 100. The local supply of Bride and Bridesmaid has been fine at \$4 to \$8 per 100. American Beauty are suffering very much and a large per cent. remains on hand because of the poor quality.

Forget-me-not at \$2 per 100, Mignonette at \$3, Freesias at the same figure, and Daffodils at \$4 per 100 are delightful

ful innovations which customers take readily.

Callas and Harrisii Lillies are taken from the growers whenever offered at \$12.50 per 100, \$3 to \$4 per dozen is the retail quotation for them.

Single Violets are outselling the double ones at present because of their fragrance and freshness; the wholesale price for either is 60c. to 75c. per 100.

Sweet Peas in several pastel shades are being gratefully received at 50c. to 75c. per 100.

There is little call for Orchids right now, fortunately but few of them are on offer. 50c. a bloom for Cattleyas is the current price.

Some of the growers are well supplied with potted plants for which there is a good market; Azaleas and pans of bulbous stocks are given preference.

I. B.

ST. LOUIS, Feb. 7.—In speaking of the trade done last week we can say that it was most satisfactory in all lines; the West End florists especially, put in a busy week, as is always the case just before Lent sets in. This week will about finish up the social work for a time. Work for funerals, too, was very brisk with the downtown florists, who say that they will not feel the effects of Lent as much as the uptown florists who have very little transient trade.

Prices on stock were rather high on everything except Violets of which there were many more than the commission men could dispose of, unless at very low prices. Should the fine weather keep up they will be in big supply for Valentine Day, next Monday, Feb. 14. In lots of 1000 they brought as low as \$1.50, and 25c. in small lots.

Carnations seem to hold up in prices at from 3c. to 4c. for fancy and \$1.50 to \$2 for common; White and Enchantress have the call.

Roses are the only stock that is scarce and any variety brings a good price. The Rose shippers say they will soon have a good supply and then prices will take a drop; \$10 to \$15 per 100 is asked for choice. Bulb stock is coming in freely but none is over stocked. Lillies are coming in freely at \$12.50 to \$15 per 100 and sold well all last week. Tulips and Von Slons are now in the market and a few Dutch Hyacinths. Smilax and all other greens are in plenty and all sell well.

CUT FLOWERS AT WHOLESALE

New York

The date for the New York Florists' Club banquet has been decided upon as March 17, and the committee in charge is sparing no effort to make it a complete success. It will be given in the new Fifth Avenue Restaurant, corner 23d st. and Broadway. During the week in which this interesting event will take place the American Rose Society will hold its annual convention at the American Museum of Natural History.

Last Monday morning the front of the restaurant next to Young & Nugent's store on 28th st. was blown out, and at the time several engaged in the wholesale trade were taking breakfast. The affair caused quite some stir, as it was first thought to be due to an anarchistic plot, but later developments showed that the accident was caused by undue pressure in the wrong place. Sufficient to say none of the breakfasters were injured.

Wm. Hanft is responsible for the idea that an "original floral art club" should be formed, having as its object the publication of a monthly paper, containing an account, with photos, of the novelties introduced by florists in general, thus establishing the originators' claims and placing the new ideas in a more prominent manner before the trade.

The Elberon Horticultural Society held its annual dinner at Orange, N. J., Feb. 11.

John P. Mallon, Brooklyn's popular retail florist, was last week elected president of the Tenth Assembly District of Brooklyn.

Henshaw & Fenrich are now receiving shipments of Sweet Peas of the following well-known varieties: Christmas Pink, Florence Denzer, Watchung, Mrs. Chas. H. Totty, Gov. Fort and others, all of which have stems 12 to 18 inches long. This firm will have a fine display of Valentine novelties, suitable for all classes of trade.

President James Wood of the Horticultural Society of New York read a paper on "Horticultural Ideas," in the American Museum of Natural History, Feb. 9.

James McMannus, 42 W. 28th st., is receiving some fine Lilacs, Gardenias and other novelties, useful for all occasions.

Walter F. Sheridan is handling some Forget-me-nots, that should prove popular for St. Valentine's Day.

Clarence Slinn, who has been with his brother B. S. Slinn, Coogan Building, for the past two years, has returned to his home in Nyack, N. Y. Since his absence he has been missed, as his geniality secured many friends in the trade.

Fleischman is having a store fitted up in the Hudson Terminal Building. It is finished in white enamel and tile, and will be opened shortly.

Mr. Ross of Sherry's, attended to the decorations for the Havemeyer-Webb wedding on Feb. 8, at St. Bartholomew's Church. The church was simply decorated; clusters of Easter Lilies were fastened to alternate pews along the nave, but the chancel was elaborately decorated, and practically screened from the body of the church with a hedge of white Roses, Lilies and Spring flowers, while at each side of the steps leading to the altar tall pink flowering Almond shrubs were so placed as to carry out a gate effect. The hack of the chancel was banked with white cut flowers and Palms.

C. H. Totty of Madison, N. J., gave an excellent talk on Chrysanthemums on Jan. 21, before the North Shore Horticultural Society, Manchester, N. H.

Mrs. Mary Hallock Bennett, daughter of the late E. V. Hallock, is the proud mother of a baby girl which was born in Jamaica, L. I., Feb. 2.

W. J. Elliott, of W. Elliott & Sons, is practicing law this week—ou a jury in the Supreme Court.

Friends of F. D. Hunter, the well-known member of the staff of J. H. Small & Sons, Broadway store, will regret to learn of his serious injury a few days since through an automobile, of unknown ownership, running him down in the Bronx. At last reports he is slowly recovering.

J. H. Kershaw, who has been with Arthur T. Boddington the last couple of years, is now with the F. W. Kelsey Nursery Co., 150 Broadway, this city.

T. Mellstrom, the American representative of Sander & Sons of St. Albans, England, and Bruges, Belgium, sailed on the S. S. Oceanic for a six weeks' visit to the home office. During Mr. Mellstrom's absence his office at 235 Broadway, this city, will be open as usual.

2-Killarneys

At this season both the White and Pink are at their best, large heavy buds, plenty of substance, a money making pair for every florist.

Philadelphia

Ladies' night, held Feb. 4, in the Florists' Club rooms proved to be a very great success. About 100 persons were present, and those who stayed away missed a fine treat. The rooms were tastefully decorated with wild Smilax, Palms and some flowering plants, while on the tables were sandwiches and other eatables for all. During the evening ice cream and cake were served, while lemonade, and some of John Westcott's famous punch, were partaken of by all, according to the individual taste. The ladies participated freely in the shuffle board and bowling games, prizes for which were won by Miss Kohler, Mrs. Dorp, Mrs. Leonard and Mrs. Wolfe. Popular songs were sung by outside talent, and instrumental music was listened to until about 10 o'clock. Other parts of the program were the solo "Kilkenny for Me" and "Loch Lomond," sung by Ed. Dooner, a reading by Miss Kohler and a song by A. M. Campbell. These with many other enjoyable features made those present wish that more such evenings could be arranged for, and the committee deserves thanks for the able manner in which everything was conducted.

The Collingdale greenhouses have been repaired, and the work of producing the best Asparagus for the Philadelphia market goes merrily on, under conditions which have certainly been nerve racking since the recent heavy snow storm. It is understood that W. A. Leonard of Lansdowne, Pa., intends to build another greenhouse for Roses this coming season.

The unusual fall in temperature last Sunday was the cause of many reports of low temperatures, and some actual freeze-ups in Kennett Square and Lans-

Chicago

The shortage of stock in the line of cut flowers for some weeks, and the high prices that have been demanded for same, has led to an increased trade in all small flowering plants, and all retailers are displaying assortments of foliage and flowering plants of all kinds obtainable, including pots of Tulips, Roman Hyacinths, Cyclamens, Azaleas, Begonias, Primulas, and in some stores small bushes of white Lilac are to be seen; all meet with a more ready sale than is usual at this season. Many orders were received from the South up to Saturday of last week, for the Mardi Gras celebrations at New Orleans. Orders for St. Valentine's Day are also being booked, with the prospect of a more abundant supply not very encouraging.

A. Lange had the most elaborate wedding decoration he has had this season, on the occasion of the marriage of Mr. J. Malony's daughter, of Ottawa, Ill., on Tuesday, February 8. Herbert Stone left last Sunday to take charge of the decorations. The entire house was decorated in pink and white with quantities of Smilax. Under the canopy erected at one end of the drawing room was placed

19-21 Randolph St., CHICAGO, ILL.

Please mention the Exchange when writing.

two immense vases of Lillium Harrisli. The bride carried a shower bouquet of Lily of the Valley. The matron of honor carried pink Roses. The dining table was arranged with baskets of pink Roses, a large one placed in the center, with numerous small ones corresponding, made a very effective arrangement. The private car that conveyed the newly wedded pair to Chicago after the wedding was also elaborately festooned with Smilax and Roses, as was likewise the suite of rooms occupied by the bridal couple at the Auditorium Annex. Mr. Lange says it required considerable time to get enough material together to carry out the work.

Mrs. Percy Jones, at the Flower Growers' Market, is now handling flowering plants in connection with the cut flowers, seemingly with success.

The familiar face of Fred Strail is missed from the force at A. Lange's store. He is now located at the store of the Bohannon Floral Co.

Harry Philpott, who is at present visiting the Coast, wired his regrets to the Chicago Florists' Club last Thursday, at not being able to attend the installation of officers. As vice-president he would have enjoyed being with the boys.

In visiting the Automobile Show at the Coliseum the past week, one could not imagine when reaching the interior, which was a veritable forest of trees and evergreens, that just outside the walls of the same building such severe storms were prevailing. The decorations in the line of trees and greens were never so elaborately carried out. Wittbold was responsible for them.

Carl Cropp of Vaughan's Seed Store, who took a trip East from Pittsburg after the Carnation convention, arrived home on Monday, well pleased with his trip. D. D. P. Roy is now connected with the Vaughan establishment.

John Straley, formerly with Fleischman, who some time ago located at 607 North Clark st. in the florist business, is very desirous of subletting his store, other business claiming so much of his time that he cannot give it the proper attention.

By the time the EXCHANGE goes to press Winterson's Seed Store expect to have their new catalogs ready for distribution. This season the edition is very attractive and should be a winner.

Conrad Fraunfelder, who was taken seriously ill some weeks ago with pneumonia, is so far improved that he is able to get around a short time each day. It is now hoped that he will fully recover.

Vaughan's Seed Store is meeting a heavy demand for tuberous Begonia bulbs, and all classes of Spring bulbs. Many dealers seem to have lost their shipments by frost.

The employees of Wietor Brothers' store were shocked to learn of the death of John Orsesky, which occurred at St. Bernard's Hospital on Thursday, February 3. He had been in the employ of the firm for 7 years, and was a conscientious and faithful worker, always cheerful, and well liked by all. Mr. Orsesky was taken ill the Sunday night previous to his death, but was not considered seriously so until Wednesday, when the doctor pronounced it appendicitis. He was removed to the hospital, but died before the surgeons had time to operate. The deceased was 22 years old and a member of the Rose team of the Chicago Florists' Bowling League. The funeral took place on Monday morning, February 7, from the residence of his mother, 3203 Fox st. Many members of the wholesale houses' staffs attended.

H. M. Robinson and Wm. Penn, of Boston, spent a few days in Chicago recently. Mr. Robinson to look over the prospects of selling 50 million of his famous Ferns for the month of May. Mr. Penn to see a replica of his face on the window of a cigar store in the wholesale district, also to take in the sights and a walk along the lake front, under the guidance of their old college mate, F. E. Waters. Both headed for New York on the 20th Century on Saturday, February 5.

Roy Wilcox visited the wholesale market last Saturday and congratulations were in order, as he was just returning with his bride from their honeymoon in the East. They left on Tuesday for their home in Council Bluffs, Ia.

Daniel Branch, florist at 313 E. 51st st., is branching out again, this time opening an additional store at 43d st. and Forestville ave., in the place formerly occupied by Raedke.

Co.'s store is a very handsome loving cup, with stag handles, 9 inches high, handsomely engraved with this inscription: "The Deamud Cup. Individual Bowling Trophy, for Highest Average Man, Season 1909-10, of The Chicago Florists' League.

E. P. Barnett, as manager, is opening a high class flower shop at Oshkosh, Wis., which will be run under the name of Oshkosh Floral Co. Mr. Barnett has been very prominent at the flower shows, and with many of the Chicago florists for some years.

Mr. Johnson of D. D. Johnson Co., manufacturers of Evergreen Brand fertilizer, promises in the near future to write a series of articles for the florists' papers on "Fertilizers." These he feels will be of much interest to all users of these articles. A letter from Cornell University, New York State College of Agriculture, Ithaca, N. Y., says they will this season experiment with the Evergreen brand of fertilizer, their attention being drawn to same by the advertisement in the Florists' Exchange reporting to the D. D. Johnson Co. the results obtained.

Fred Lieberman, in charge of the shipping department of Vaughan & Sperry, was married on Thursday of last week to Miss Clara Dick of Chicago. After a short trip, Mr. Lieberman reported at his post of duty on Monday morning last. All wish the happy couple the best of luck.

The Chicago Tribune of Feb. 8 says: "Peter Reimberg, finishing third term; record of quiet efficiency and steady support of worthy measures in committee and in council; a reliable alderman." We who know him, feel that the Tribune is right in this respect.

Illinois State Florists' Association Meeting

Among the Chicago people who have stated their intention of going to the Illinois State Florists' Association are: W. Lynch, E. P. Pruner, Geo. Asmus, N. Miller, C. Washburn, J. C. Vaughan, M. Barker, Aug. Poehlmann, a representative from A. L. Randall Co., H. B. Howard, W. N. Rudd, Mrs. Hancock and Mrs. Flint.

Fred Heintz of Terre Haute, Ind., is in Chicago this week attending the automobile show held at the Coliseum.

Horticultural Society of Chicago

The executive committee of this Society of Chicago met Friday afternoon, Feb. 4, at the Art Institute. J. C. Vaughan was appointed chairman of the committee for the present year. The question of a premium list and an appropriate amount for running expenses were discussed. Geo. Asmus presented a preliminary premium list to the amount of \$4500, exclusive of \$200 for other appropriations; the matter was put over until the next meeting, to be decided on. One thousand dollars was laid aside for running expenses for the present year. The report on the expenses of the flower show of 1909, showed they amounted to \$10,193, and the receipts \$12,000, netting a balance of nearly \$2000.

The Chicago Florists' Club

The regular meeting of the Chicago Florists' Club was held on February 3, at the Union Restaurant. The installation of officers was the first business on the program, after which new business was taken up. W. Graff, Columbus, O.; J. F. Dumke and E. J. Fichter of Chicago, were elected to membership. J. Straus of Chicago was proposed for membership. President Geo. Asmus appointed the following committees for the year of 1910. Transportation: E. J. Winterson, chairman, Michael Barker and Fred Lautenschlager; sports and pastimes: T. C. Yarnell, A. Zeck and F. Ayers; good of the club: Herman Schiller, Frank Pasternick and J. P. Degnan. Pres. Asmus appointed additional members to act in conjunction with the entertainment committee in arranging for a ladies' night, to be reported on at the next meeting of the Club, which will be held March 3; the additions were, H. N.

Bruus, A. C. Kohlbrand and C. A. Robertson: It was discussed and voted on that the secretary of the Chicago Florists' Club send a letter to the secretary of the Pittsburg Florists' Club, thanking that Club for the delightful manner in which Chicago visitors were treated, and the courtesy extended to all the members of the Chicago Club, while in their city at the recent convention. A card has been sent to each member of the Club, conveying the information that the official train to the Illinois State Florists' Association meeting, to be held at the Illinois State University, Urbana, Ill., on Feb. 15-16, would leave the 12th st. station of the Illinois Central Railroad on Tuesday morning, February 15, at 9.40 a.m.

Visitors: E. L. Washburn, Bloomington, Ill.; A. C. Brown, Springfield, Ill.; Geo. W. Jack, Springfield, Ill.; F. Ammann, Edwardsville, Ill.; C. E. Gullett, Lincoln, Ill.; Ed. Amerpohl, Janesville, Wis.; B. Eschuer, of M. Rice & Co., Philadelphia, Pa.; Paul Berkowitz, of H. Haysdorfer & Co., Philadelphia, Pa.; C. G. Anderson, Kenosha, Wis.; F. V. Craig, of William Hagemann & Co., New York.

Standing of the Bowling Teams

Owing to the Chicago Florists' Club meeting, on Feb. 3, falling on the bowling evening many of the bowlers attended the Club meeting, consequently the teams that bowled were comprised of four men each instead of the usual five.

The standing of the teams on Feb. 4, was as follows:

	Total Games	Grand Pins	Average	W. L.
Violets	48	32851	705 11-48	30 18
Carnations	48	32441	713 17-48	25 23

High Team Game 921.
High Team Average, \$69 and little fraction, held by the Orchid Team.

Springfield, Mass.

Springfield florists have been enjoying good business since last Fall; their Christmas business was unusually good and in many stores was far better than ever before. Funeral work is coming in very regularly, so much so that some are working nights and Sundays in order to get orders out on time.

Springfield has nearly 90,000 population and within a few miles of the city are about 250,000 people to whom the local florists cater. There are six strictly retail shops and a number of greenhouses to which a nice retail trade is going; there are also several new houses going up this coming Spring.

Mark Aitken of 378 Main st. has one of the most complete retail stores in this section. He has been here for nearly 18 years and at this time has three delivery wagons engaged in his local business. His store is nicely situated near the larger department shops and the double windows are well arranged for catching the eye of the passing public. Mr. Aitken has arranged with the Lord & Burnham Co. for the erection of 65,000 ft. of glass to be built as soon as the weather permits. Goldfish and birds are handled here and a nice trade is had in supplies for same. Business is excellent and funeral work very brisk.

Ostermann & Steele, 137 State st., came here about four years ago from New Haven, Conn., and their business has been increasing nicely each year. They recently had the entire store, refurnished in green and white with marble counters and new furniture. The store is located near Main st. where the traffic is greatest and the window display attracts new trade daily. The past season was the best in their experience and funeral work with them is excellent.

Wm. Schlatter & Son are at 422 Main st., between two of the largest depart-

"THE EVERGREEN BRAND FLOWER FERTILIZER"

is pure plant food, immediately available. It permanently enriches the soil. It prevents the onslaughts of plant disease, or insects and pests. Can be used at any time during the growing season, dry or in solution.

ment stores and near Court Square, the starting point for all out-of-town car lines and where all passers-by have a chance to examine the stock displayed. The greenhouses are well located opposite Oak Grove Cemetery, on Bay st., and a good trade is had here in season. Three houses were erected last Fall, giving them nearly 20,000 sq. ft. in which a little of all bedding stock is grown as well as a fine lot of plants, Ferns and cut stock. This firm has been here for about 15 years and the past season was their best on record.

A new Carnation support is being made here having several good points which will commend it to the busy grower; it will shortly be placed upon the market.

L. D. Robinson, 182 Main st., has a good location north of the "Arch," in which he retails the stock grown at his No. Main st. greenhouses. He has some 11,000 sq. ft. and makes a specialty of Azaleas and bulb stock, part of which he wholesales. Trade is reported excellent, the best in his four years in present store.

N. F. Higgins of 239 Pine st. has 8000 sq. ft. to Carnations and bedding stock. His store at 154 State st. is of good roomy size, having a conservatory in rear; the store is well arranged for display. He has been here for about five years, and during the coming Spring has arranged for 4000 sq. ft. additional.

Concord Junction, Mass.

Everybody is busy just now at the Leonard Cousins, Jr., plant, shifting Shamrocks in pots and pans for St. Patrick's Day trade. Carnations have done exceedingly well here this season; some of the finest blooms going into the Park st. Flower Market (Boston) are shipped from this establishment. A large new house is to be added next Summer, and some 30,000 Carnation plants will be housed in it next Fall. The new addition will be one of the largest in the State devoted entirely to Carnations.

The Mastin Automatic White-Wash and Spraying Machine is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for fifteen minutes.

All parts are made to gauge, and may be had for repairs.

Ask your dealer about our Extension Hose, Extension Rods, and the Mastin White-wash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

Plant Names, Pronunciation of

This handy little book furnishes a key of the pronunciation of some 4,350 names of cultivated plants, genera and species, and will be found valuable as furnishing a standard to which to refer by all who desire to be correct when they speak of plants. Sent postpaid, on receipt of Fifty cents. Address, The Florists' Exchange, P. O. Box 1697, New York.

The Week's Work

BY
FRITZ BAHR

Chrysanthemums

Chadwick a Good Commercial Variety

There might be a batch of Carnations which are not doing as well as they ought, in order to pay. We noticed one the other day and made it a part of the week's work to clear the bench and re-plant the same with stock plants of Chrysanthemums—they were Chadwicks. We find that we need more stock plants of this variety than of any other, in order to get the desired number of small plants for benching. Someone said, "are you still growing Chadwick! Why, we have discarded that variety long ago." Now, that may be true, and there are, no doubt, quite a number of new midseason and late varieties which are very good; but whether it is the lack of knowing how or not, in giving the new fellows a fair show, Chadwick and its sports are a part of our standbys, and have made good for many years back. The Golden Chadwick, when well done, is a good thing for Thanksgiving, or whenever it is ready to cut. The stock planted out now on a Carnation bench where the plants will get plenty of good air and all the sun that shines, will furnish cuttings in a few weeks. The cuttings may be removed and put into the sand, but a better way, especially when somewhat short on stock, is not to remove these cuttings when they are large enough to take but to let them remain and develop into a stocky growth about 12 inches high. Take the top then for the cutting bench, the remaining stem will soon break and furnish quantities of fine cuttings. We find this a good way with the Chadwicks.

Care of the Stock Plants from Now On

Any of the stock plants which have been in a cold house since last November are benefited from now on with a little more heat. Of course, too much heat is wrong; even a Carnation house might be called too warm by many Chrysanthemum growers. 45 degrees at night is a nice temperature, with plenty of sunshine during the day; this will start the young growth, in plenty of time, of most of the varieties we grow for cut flower purposes. While certain varieties, such as Ivory and other short jointed sorts, should be propagated early in order to get a good start with most of the midseason ones cuttings taken up to May will give good results; and the retail grower who only takes sufficient cuttings for his own wants does as well to keep the young growth of the stock plants pinched back, so as to encourage the plants to make new breaks and give him, when the proper time comes, the greatest number of cuttings of one size possible; and this is only accomplished by paying proper attention to the stock plants from now on. It is natural for them to start again, and growth made below some bench, or in a dark corner, is not fit for propagating.

Novelties for Trial Should Be Ordered At Once

Get out the note book, where the varieties which impressed you most last Fall are marked down, if you are in possession of one, or means it will never do not to try a few of the new ones at least. The firms who make the handling of new varieties a specialty usually start to ship about March, and where there is enough small stock on hand even earlier. Should there be a certain sort you wish to work up stock of before benching time, plant the young stock, whether 2 1/2" pot plants or rooted cuttings, out on a good sunny bench. Don't overlook shading them a few days, especially if they have traveled a long distance. Don't be in too great a rush, it won't be long before cuttings can be taken from such stock, which, when

rooted, can be planted out again. However, in justice to the introducer, it is only fair to follow, as near as possible the cultural directions or remarks on the habits and peculiar characteristics which each variety seems to have. It seems almost an invariable rule to plant most of the new large fellows early, in order to have the best results, so there is danger in over as well as late propagation. Don't lose any time in ordering your stock, the sooner you have it the better.

Gloxinias

Grow at least a few of these beautiful plants. The right way is to keep the show house during the Summer months in just as good shape as during Winter. I know this is often neglected especially by the smaller grower who conducts a retail place; and yet why should this be so—because there is a let-up in business for a couple of months shouldn't be the reason, although many seem to think so. The successful man will keep the appearance of the store and showhouse up every day in the year, and while we haven't a great many plants in bloom which belong to the greenhouse during July and August, at least among the stock the average retail grower handles, there are a few, and some of them most attractive ones. We might call the Gloxinias the most beautiful of them all. They have been grown by our great grandfathers, I might even say better in those days than now. The reason for this is that we are so awfully busy making, or rather trying to make, dollars, we have almost forgotten how a watering pot looks. We are complaining if we haven't got 50 lbs. of pressure when watering anything that can't stand that has to give way for something that can, so the Gloxinias, Gesnerias and other beautiful plants have made way for others. Someone says the reason that we don't handle them is that there is no sale for them.

Starting the Tubers

There are several methods made use of to start the Gloxinia tubers. As good a way as any, especially where only a few are wanted, is to pot them up in 3 1/2" pots, having the tops of the tubers just visible. If a bench can be had with bottom heat in a house of about 58°, or even warmer, in two weeks' time growth will appear. Have the pots properly drained, and use a light sandy soil. Don't expose the tubers to the full sunlight, a little shade applied will prevent the drying out of the pots. The soil should be kept evenly moist—take the chill off the water. Whenever there are no facilities to give the pots bottom heat, or if short on bench room, use flats to start the tubers in and place them on the hot water returns, covering the flats with glass or other material to keep away drip from the benches they are under. The advantage of starting the tubers in pots is that the plants are not checked by potting them up afterwards, which is to be considered. We will present further cultural notes later.

Tuberous Rooted Begonias

Their Usefulness for the Retail Grower

We are using more and more of these beautiful plants each year, and while it isn't so very many years ago that we would carry 200 or 300 plants, and at the end of the bedding season would have over half left, we sold over 4000 of these plants last year and ran short long before the end of the season. In places where there is a little protection from the hot rays of the midday sun during the Summer months the Begonias are among the best of bedding plants, and well paid filled with them will bloom all Summer and make ideal material for veranda decorations. Even as a window box plant in places too shady for Geraniums or other blooming plants ordinarily made use of in filling boxes the Begonias can be made use of and will do well. By shady, it shouldn't be taken for granted that the plants don't want any sun; they do, but can't stand it all day long during July and August. A window box filled with bright red Begonias and English Ivy will make a show all Summer if at all taken care of, and we have had plants, 3 in a 12" bulb pan, loaded with flowers up to October, standing on a veranda with an

easterly exposure; and two large beds at Ravinia Park near Chicago, each containing about 450 plants were a mass of bloom from June until cut down by frost; these beds were admired by thousands last year; both were protected against the noon-day sun by Oak trees.

Time Now to Start Tuberous Begonias

Bulbs of Tuberous-rooted Begonias which were kept over Winter, as well as the newly imported stock, should be started now; that is, if wanted for early blooming. Whenever Easter falls near the middle of April they can be had in bloom by this time and make desirable stock for that day. Good sized plants in bloom always sell during the bedding season, and are good to have to show to a customer who wants to leave an order for some to be bedded out. Bulbs of these can be started by March 10 and will be in plenty of time even if not in bloom, in fact, they shouldn't be, the flowers which developed under glass are usually too soft for out-of-doors. To start the bulbs we use flats of convenient size, about 3 inches deep. One inch of coarse soil mixed with sphagnum moss is placed in the bottom on which is spread a thin layer of fine sandy soil. The bulbs are placed on top of this, about one-half inch apart each way, and are lightly covered with the same material. If a part of a bulb projects there is no harm done. The flats are placed on the hot water returns and, if kept moist, in about two weeks new growth appears, when the flats are removed to the light in a 55° house.

Seen at Pittsburgh

Two Novelties of Merit

There was but little room to spare in the exhibition hall of the American Carnation Society at Pittsburgh for anything outside of the Carnations themselves, but the Begonias and not Carnations which were there certainly attracted much attention. The Begonias from J. A. Peterson of Cincinnati shown under the name of Pride of Cincinnati were remarkable specimens and the variety ought to prove a valuable addition to our Christmas flowering plants. I don't think this new corner will replace the Lorraine, but there is room for both. For small plants and hanging baskets the Lorraine is the more graceful, while for specimen plants the new sort will be the showiest, by far, on account of its large flowers and foliage and robust growth. The Carnation plants shown by Henry Eichholz of Waynesboro, Pa., under the name of Christmas Cheer should attract the attention of the retail grower. I counted 38 flowering shoots on one of the plants. Of what value a Carnation suitable for a pot plant would be during the Winter months we all realize. If we can get such a one, of a compact growth, medium sized but well formed flower, a free bloomer and of a healthy growth, as well as a desirable color, it means a great deal to many of us. I have no doubt that great numbers of just such have been thrown away by the men who make the growing of Carnations from seed a specialty. They have been thrown overboard, maybe, long before they had a chance to bloom, on account of their short growth. The flower of Christmas Cheer isn't exactly to my liking, there is a great deal of room for improvement, but even with that I am sure it will pay for many to grow a good stock of it for the purpose it is intended. Let us hope it will be the forerunner of others. Many plants could be disposed of in every greenhouse establishment where a retail trade is catered to. There is a great future for pot Carnations; we haven't any now among those we grow suitable for that purpose, it is a class by itself, and none of us can fully realize the number of them which could be disposed of if we had them.

Albany, N. Y.

The Albany Florists' Club held its regular monthly meeting on Thursday, Feb. 3, with a fair attendance. Mr. Irwin, of Skidelsky & Irwin Co. gave an interesting talk on crêpe chasing which was enjoyed by all present. It was decided to give a smoker on next regular meeting night in the endeavor to obtain a larger attendance at meetings in the future.

Albany is to have an automobile show in March, to be held at the State Armory. Some of our florists have orders for decorations of same.

The Broadway florists have the decorations booked for the wedding of Miss Hilda Swartz, a noted Albany singer, which is to take place on Feb. 14, St. Valentine's Day.

The windows of the different retailers are abloom with Spring flowers of all kinds, and these are greatly in demand, good quality bringing good prices with ready sales. There was plenty of funeral work in the past week to use up any surplus stock which might remain on hand.

Los Angeles

If fronds of our "Pepper Tree" (*Schinus molle*), are sold in any of the markets as greens they can be had by the carload annually. If cut back during the Winter they make rapid growth as soon as warm weather comes and, by October, the long willowy limbs are well furnished with foliage. The puzzle to me is, how do the handlers of this stock keep the leaves from falling? They are extensively used here for decorative purposes, but in the warm dry atmosphere of dwellings they remain fresh but for a day or two; after that they litter every place, where used, with fallen leaves.

Violets are now flooding the markets of this town, and the curbstone vendors have stacks of them on sale at five cents per bunch of about 100. The ladies wear them as corsage flowers; one ambitious damsel we saw with three of these huge bushes pinned on her bodice.

Carnations, field grown, offered by this class of "florists," are so poor in quality that the wonder is they sell any at all. Ten cents a dozen is the price for them. Good ones, greenhouse grown, retail for 75c. to \$1 per dozen.

Outdoor stock will improve with warmer weather. The thermometer showed two below freezing this morning (Feb. 2), and yet no frost appears on the roofs of buildings nor on plants because of the low relative humidity.

Avenue of Washingtonia robusta

I mailed you a package of seeds yesterday, which I swept up under the Palms illustrated on cover page of February issue of *The Pacific Garden*. [The view is of a street in Los Angeles lined on both sides with the magnificent *Washingtonia robusta*, the fan-leaved Palm of great size.] A score of years hence we shall have miles of just such looking avenues in this town. Then there will be profanity in abundance, because of the seeds which are borne in great abundance and litter the sidewalks for four months of the year; the gardener who is expected to keep the place tidy on a limited amount of time will have his patience severely tried. Moreover, the peduncle which bears them is four to six feet long and they, with the spathes, are showered down by a high wind to add to the litter. You will observe that the trunks are swathed in dead leaves with a coat a foot thick, which, the boys bent on mischief are liable to put a match to at any time; the result is a conflagration that disturbs a community. While not dangerous, it is disquieting to have such displays close to one's dwellings. Strange to say the fire does no injury to the tree. [Whatever the disadvantages to the resident the sight of that magnificent avenue of Palms must certainly be inspiring to the visitor.—Ep.]

Bloom Amid the Frost

The temperature on the ground yesterday morning was 29° and where there was water, it was frozen hard enough to bear the weight of a man. The Weather Bureau instrument (151 ft. above the sidewalk) showed 39°, and yet *Coronilla glauca*, *Hardenbergia*, and our exquisitely beautiful *Acacia Baileyana* cultiriformis and *podalyriaefolia*, are in all their glory—which is indescribable—while *Cassia tomentosa* is just beginning to show its orange-colored bloom which will give us a wonderful display of flowers for four months; four weeks is about the length of time for the *Acacias*.

Geraniums are a mass of bloom, while the *Narcissus* and *Oxalis* families are doing their best to brighten up the landscape.

To the gardener who lives in the Atlantic States these statements may seem incredible, but are to be accounted for by the fact that on Feb. 2 the humidity at 5 a.m. was but 43 per cent.; on Feb. 3, 49 per cent. To be sure such a low temperature will drop the buds on *Sweet Peas*, which have not been a great success this Winter; *Poinsettias* have been a total failure.

The new Bean, *Mucuna Lyonii* (*Stizolobium Lyonii*), and the new *Pipe Gourd* are to be given a try-out by the Pasadena Gardeners' Association this season; their report will be made in due time and given to the public in these notes.

Our old friend Albert Knapper, formerly of New Jersey, sent Eastern friends a welcome to visit California. Feb. and March are the best months there; later, Nature shows green both East and West and then the contrast is not so great.

BEST ON EARTH

crops. The ———— Co. is receiving flattering testimonials as to its efficiency and jobbers are finding it a good and profitable line. The day when a good root, highly scented, could be had on the spot is past and the average florist is looking for the new 38x300-foot houses of the W. Peterson and N. Forty-eighth avenues, collapsed January 4. The house went down in sections, only about 40 to 50 feet of it being left standing. This is a serious mishap, as the carnations were just in full cut, but the builders at once took the responsibility upon themselves and the house was replaced.

and they each ail-
ment which differs from
of the other. The two have come
to the seedsman are mixed and sold,
and so the variation is increased.

(To be continued)

PHILADELPHIA NOTES.

The Christmas snow storm caught the unawares as to coal. By herculean efforts enough to keep going was wallowed through the snow. A small cave-in of a section of the greenhouse plant was an incident.

The newspapers of the country have circulated everywhere the news of the trying family affliction and bitter distress which has come to that honored representative of the seed

AND IT WON'T GET ANY NEARER THE EARTH OR ANY FARTHER FROM IT BECAUSE IT STAYS PUT WHERE IT IS PUT

We are speaking of the L. & B. Sectional Iron Frame House. The house that never in all its quarter of a century of history has had a blow-down nor a snow cave-in.

It's the house that can be depended upon no matter what the time of year or what the weather. It's the house with the right number of supporting columns—its frame work is not cut down to the very limit of the danger mark—it has a liberal margin of safety.

It secures to the grower the most desired of all things in greenhouse construction—a house combining the points of greatest strength and the casting of the least shade.

These are our reasons for asking you to write us whenever you are ready to take up building.

Interior of Alban Harvey & Sons' L. & B. Sectional Iron Frame house at Brandywine Summit, Pa. It is 43 feet wide and 250 long. The two rows of columns relieve the tremendous strain otherwise exerted at the ridge and eaves. It is a house that is made to withstand the shock of wind and storm.

European Notes

Less rain has fallen during the week just closing and the floods in unhappy Paris already show signs of abatement.

Out in the West our growers have not suffered quite so severely, but very much land and large acreages of plants for seed are still lying under water and mud. The last named is the worst, as while the water may clear off, the mud sticks fast. This especially applies to the Mangel plants which are still in the open and are consequently lost to such an extent that the growers are already exacting higher figures before transplanting in fulfillment of contracts already accepted. It is, of course, quite reasonable for them to demand an advanced price for any extension of the same.

As regards Radish for 1910 harvest, the growers remain immovable except at the prices we are accustomed to insert in our retail catalogs. A few of the more reasonable among them offer to accept from their old friends a very small percentage of their usual acreage, to be delivered at market prices at time of harvest; and while this leaves the matter in a state of glorious uncertainty, it seems to be the only reasonable solution of the present difficulty. Obviously, therefore, dealers must decline to accept any further contracts, except on this basis.

The English and German growers will doubtless increase their cultures of this article, but they can hardly compete with the French growers, so far as the forcing

FLOWER SEEDS

SALVIA SPLENDENS

	1/2 oz.	Oz.
Grandiflora	\$.026	\$1.50
The best tall Salvia in the market.		
Compacta	.40	2.50
Bonfire	.40	2.50
Hardly any foliage, but masses of flowers.		
Lord Fauntleroy, very dwarf.	.75	4.00
Maroon Prince, deep maroon.	.75	5.00
Fire Ball, most intense of color.	.75	5.00
Silver Spot, leaves spotted, very attractive	.26	1.50
Zurich, the best Salvia yet introduced.		
Plants grow very compact, show little foliage and bear heavy flower spikes, which are thickly laden with bright scarlet flowers. Flowers early in July and remain in bloom with later varieties.	1/2 oz. 75c. oz. \$6.00.	
Patens. (Blue Salvia). 1-16 oz. \$1.00.		
Salvia Splendens. King of Carpets. The best dwarf bedding Salvia on the market today, outliving even "Zurich."		
The plants branch from the bottom and to such extent that the main stem is never visible. All side branches droop completely to the ground, making the whole plant a perfect half ball of fire. The plant grows but 15 inches high and flowers even earlier than "Zurich."	1/2 oz. \$1.00. oz. \$6.00.	
The veteran Salvia grower, Mr. F. Beddard, says: "About the Salvia, King of Carpets." It has done very well considering the dry weather that we have had, and I consider it one of the grandest dwarf salvias that I ever saw."		

AGERATUM

Extensively raised as a pot plant and used for edging.		
Lasseaux	1/2 oz. 20c.	\$0.50
Mexicanum	.16	
Album. Large flowering white	.25

Dawn of Day. (Novelty, 1908). The earliest flowering Aster in existence. Fine white, perfect in form and growth, long branching stems and symmetrical as Daybreak and undoubtedly unsurpassed as a white bedding variety.	1/2 oz. 50c. oz. \$3.00	
Rawson's Queen of the Market Aster. The best early Aster for the Florist, quality being very much improved.		
Finest Mixed, 1/2 oz. 15c. oz. 50c.		
Crimson, Dark Blue, Light Blue, Rose, Peach Blossom, White, 1/2 oz. 20c. oz. 50c.		

varieties are concerned. The later and more robust varieties can be grown quite as satisfactorily in these countries as in France.

The P. L. M. Railway from Paris to the South announce that they will commence running some of their most important trains in a couple of days; this will, we trust, enable us to see something of our seeds from the neighborhood of the *Basses Alpes* that have been hung up no one knows exactly where for the past three weeks.

Incidentally, it may be interesting to mention that Mons. Philippe de Vilmorin was to have visited London on Jan. 29, to preside at the twenty-first annual dinner of The Société Française d'Horticulture de Londres, but having some nine feet of water in his Parisian residence he was unable to fulfil his engagement. A collection taken up in the room on behalf of the sufferers realized about \$500.

In M. de Vilmorin's enforced absence the chair was occupied by M. T. A. Laurence de Lalande, French Consul General in London.

In regard to belated shipments of the present season's goods, it is extremely provoking, after we have moved heaven and earth, well nigh, in our efforts to get the goods ready for shipping, to be told that the ships are fully loaded with wool and cannot take a bag of seed on board. This, of course, only applies to the lines that quote very low rates of freight, but these are the most freely patronized by our friends. In this case the fault is not ours, but doubtless we shall have to bear the blame.

EUROPEAN SEEDS.

American Notes

Trade Steadily Increases

Just for a few days the snow storm has halted trade, but every day now is bringing us nearer and nearer to the time when nothing will interfere with the rush of the seed selling season. The feeling is very general among seedsmen, and planters of seeds as well, that the season just opening will be one of the most active experienced in years. So widespread is the knowledge that seeds of practically every variety are in short supply, that early buying is sure to be a most marked feature this year; and if early buying materializes to the large extent now expected more seeds will be disposed of before the first of April than ever before. Mail business on the whole may be said to be quite a little larger than a year ago, even if the catalogs were somewhat late in being sent out. Wholesale trade is good in spite of the high rates being charged. Counter orders are gathering headway with each succeeding day. The private gardeners are placing their seed orders much more freely than ever before, and several of the larger seed houses who make a specialty of this line say, that the individual orders are averaging much larger. Every member of the seed line is now occupying his time either putting up orders or finishing the last packaging for the season; the time for the commencing of the seedsmen's rush is very near now.

The Full Measure Bean

Among the newer varieties of dwarf or bush Beans that are being extensively advertised this season, none is more worthy than the Full Measure. The green pods of this sort are round and long, many of them measuring five inches in length, and perfectly stringless. The quality is of the first rank, being very tender and retaining this feature even after the pods have matured. It is one of the newer varieties that the best informed seedsmen are, with one accord, speaking well of and prominently listing. It will please customers very much.

The Sugar Pumpkin

It has of late years come to be very generally recognized among the seed trade that some of the most neglected varieties make oftentimes the best subjects for extensive exploiting as specialties. One of the best examples of this is perhaps the bringing to prominent notice, by many seedsmen, during the last few seasons, of the old favorite New England pie Pumpkin. This sort has, almost from time immemorial, been greatly esteemed in the East, but almost unknown, comparatively, elsewhere. For pie making the small sugar, or New England pie Pumpkin cannot be excelled. The Pumpkins themselves are small, but very sweet, fine-grained, and simply superb in quality. The skin is deep orange, and the flesh a rich yellow. Such describes this neglected vegetable, which is now beginning to be most prominently illustrated and described by many of the largest seedsmen all over the country, in their annual seed catalogs.

Plant Names, Pronunciation of

This handy little book furnishes a key of the pronunciation of some 4,350 names of cultivated plants, genera and species, and will be found valuable as furnishing a standard to which to refer by all who desire to be correct when they speak of plants. Sent postpaid, on receipt of Fifty cents. Address, The Florists' Exchange, P. O. Box 1697, New York.

Dreer's Superb American and Imported Asters

We take special pains to secure only the very choicest Asters and feel sure nothing better in quality can be had at any price. Our stock of American varieties are grown under our own supervision, while the Imported sorts are procured from the most reliable sources.

Dreer's Superb Late Branching Asters

The finest Aster for late August and September blooming.

The plants form strong, branching bushes, 2 to 2½ feet high, bearing on long, strong stems their handsome Chrysanthemum-like flowers, which, under ordinary cultivation, average 5 inches across. The form of the flowers, together with the length of the stems, places them at the head of Asters for cutting. They come into bloom from two to three weeks after the average type, usually being at their best during September.

	Trade pkt.	Oz.
Azure blue. A rich deep lavender	\$0.25	\$1.00
Pure White. Extra fine stock	.25	1.00
Shell Pink. An exquisite shade	.25	1.00
Rose Pink. A very desirable color	.25	1.00
Deep Rose. Rich and brilliant	.25	1.00
Deep Purple. Royal deep blue	.25	1.00
Lavender. A pale greyish-lavender	.25	1.00
Crimson. Very rich	.25	1.00
Finest Mixed. All the colors	.25	.75

Dreer's New Late Aster "Crimson King"

A superb new late-branching variety, with perfectly double flowers of rich, rosy crimson, full of fire. Fine for cutting, showing up well under artificial light. 50c. per trade pkt., \$3.00 per oz.

Queen of the Market Aster

Dreer's Superb Late Branching Aster

Crego's Giant Comet Aster

Crego's Giant Comet Asters

Magnificent fluffy flowers, averaging over 5 inches across, with long strong stems; the finest of this type. Comes into bloom in August, continuing well into September, and, unlike most of the Comet sorts, stands when cut and is a good flower to ship. We offer two colors, our own saving, of the highest quality.

	Trade pkt.	Oz.
Shell-pink	\$0.40	\$2.50
Snow-white	.40	2.50

Dreer's New Aster "Pink Beauty"

A magnificent cut-flower variety, in bloom from early August until well on in September; 24 to 30 inches high; flowers average 4 inches across, on long, strong stems. Color a delicate bluish pink, and pronounced by experts to be the finest pink midseason sort yet introduced. 50c. per trade pkt., \$4.00 per oz.

Late Aster "Violet King"

A new and distinct color in the Late Branching class, fine large double flowers of a pleasing shade of violet, a strong, free grower and very free flowering. 40c. per trade pkt., \$2.00 per oz.

Early Wonder Asters

This is the earliest Aster in cultivation, being in full bloom when Queen of the Market is only in bud, frequently coming into bloom in late June. Very valuable for cutting.

	Trade pkt.	Oz.
White. Pure glistening white	\$0.40	\$2.00
Pink. A good, clear pink	.40	2.00

Four Fine American Asters

Daybreak. Of symmetrical growth; attains a height of 18 inches, and produces during August, perfect globe-shaped flowers, of a delicate pink tint. 60c. per trade pkt., \$2.50 per oz.

Lavender Gem. One of the most beautiful Asters. Of Comet type, with large artistic, loosely-arranged flowers of the most charming shade of lavender imaginable. 50c. per trade pkt., \$2.50 per oz.

Snowdrift. A most valuable variety, coming into flower in July, with superb plummy snow-white flowers of the Ostrich-feather type. 50c. per trade pkt., \$2.50 per oz.

White Fleece. One of the largest and most perfect of the Comet type, bearing flowers 8 inches and over across, formed into a plummy globe of glistening white. Blooms in August. 50c. per trade pkt., \$2.50 per oz.

Imported Asters

QUEEN OF THE MARKET ASTERS.
The best and most popular early Aster.

Nursery Stock

Those seedsmen who do not catalog a regular department of nursery stock should most certainly make arrangements with some good nursery to fill for them what orders in this direction they are sure to receive just as soon as the planting season opens. Every dealer in seeds has calls for nursery stock, and such orders can be handled most satisfactorily to both seedsmen and purchaser, if suitable plans for such business have been perfected before the season starts. All such orders are packed at the nursery, and delivered to the seedsmen in such shape that all he finds necessary to do is to change the tag on same and forward to destination. Such orders make a very nice adjunct to any business, and are quite profitable, if proper arrangements have been made.

New York Seed Trade

The past week has added greatly to the activity of the seed trade. Had it not been for the severe snowstorm, counter business would have been even heavier, and it is much ahead of last year as it is. The seed selling season is starting with a rush here. Vaughan's Seed Store is beginning to be a most busy place these days; the new corner location at 25 Barclay st. is certainly "just the place" for a very large transient business. Charles MacTaggart has resigned his position in the vegetable seed department of J. M. Thorburn & Co., and connected himself in the automobile line at Newark, N. J. Mr. MacTaggart's friends, and he has many in the trade, wish him the greatest success in his new departure.

F. E.—The Best Advertising Medium

Charles Loechner, of the Yokohama Nursery Co., who broke his leg at Christmas time through falling on the ice, is recovering as rapidly as could be expected.

Maurice Fuld, of W. W. Rawson & Co., Boston, Mass., was among our visitors the past week. Mr. Fuld is an enthusiastic as ever regarding Dahlias and Gladioli. He feels confident that it will be a great year for these, and in fact all Spring bulbs.

The Stupp & Walter Co. have the past week been receiving many orders for Begonia bulbs, of which they have a very fine stock. Gloxinia bulbs have also been in active demand, with the result that many more than usual have been disposed of.

At Boddington's, trade has started in real earnest, and the whole force have their hands full every minute. A most encouraging commencement to the season's business has certainly been made. This house is booking orders in very large volume for Cannas; the sales in this line will aggregate this season some eight hundred thousand roots.

William Elliott & Sons have been disposing of a great many small table Ferns at 60 cents per dozen; they have found ready purchasers.

Burnett Brothers report that their private trade is, so far, very much larger than a year ago.

Boston Seed Trade

Maurice Fuld, manager for W. W. Rawson & Co. has been three days in New York on a business trip. He reports that Gladiolus Augusta is very scarce all over the country.

John Russell is in the Mass. General Hospital, recuperating from an operation for appendicitis. Mr. Russell is one of the salesmen at W. W. Rawson's.

H. Buck, formerly with Arthur Boddington Co., New York, is now employed by the W. W. Rawson Seed Co.

R. C.

A Progressive New Zealand Seed House

Messrs. F. Cooper, Ltd., seedsmen and horticulturists, have just completed and moved into their new building in Wellington, N. Z., some of the features and fittings of which will be of interest to American seedsmen.

In its external it bears a resemblance to the New York skyscraper. With its columnar style of architecture it rises in its five stories like a tower above the street. Warm red brick, with concrete facings, large windows filling the whole intervals between the main columns, touches of color in the glass of the over-windows, and a surmounting parapet of concrete give it a singularly light and airy appearance.

Nor is this belied by the interior. The ground floor is devoted to the shop, where the public may inspect and purchase seeds and plants of wide variety. These are excellently displayed in the shallow windows, especially arranged for convenience in handling goods.

The basement consists of light airy cellars, lit by Lux prism street lights, and used for the storage of seeds and other wares in which the firm deals. Access is given for bulk goods by a right-of-way opening into Mercer-street and a "shoot" window alongside. The upper floors are gained by two lifts—one for passengers, the other for goods. The next floor is devoted to suites of offices. On the third floor are horticultural sundries, on the fourth the mail order department, a special branch of the business, and also the firm's own offices.

Features on the way up are the fire-proof doors, the general solidity combined with lightness and airiness of the interior and the balcony window boxes.

Up on the roof is perhaps the most striking novelty of all. The low dome-shaped structure there, with its glass covering suggests the nature and use of this crowning feature. It is a roof conservatory. Here the firm not only displays a great variety of plants in pots for sale, but it also tests its seeds. The equipment is complete, water is handy, and the temperature can be adjusted at will.

Those Catalog Pictures

In their catalog of Strawberries and small fruits issued this season, M. Crawford Co. of Cuyahoga Falls, O., state:

"We are sometimes asked why we do not use pictures of fruits in our catalogs, and this seems to be a good oppor-

J. MURRAY BASSETT, Packard St. Hammon, N. J.

unity to state our reasons for not doing so.

We are plain people, and our statements are conservative. If we were to use illustrations it would be contrary to our principles to exaggerate in them any more than in descriptions. We should require that every picture be the exact size of the fruit from which it was made, and such pictures would as a general thing be so modest in size that they would hardly be noticed in comparison with the misrepresentations extant. We receive many illustrated catalogs, and some of them keep to the truth, but others exhibit fruits and various kindred products which are monstrous in dimensions. They are said to be photographed from nature, and no doubt they are, but they are so magnified as to be out of all possibility of truthfulness.

Take the strawberry for instance: All who are familiar with this fruit know that its seeds are small. What then is the conclusion when they appear in a picture as large as radish seeds, or even larger? We have often seen them one-sixteenth of an inch in length, by measure. We assert without hesitation that all such pictures are frauds. The Fendall, a new strawberry of great size, is pictured in various catalogs this Spring, and although the illustration is nearly three inches across, it is an exact reproduction of the berry, as may be seen by its small seeds; but what shall we say of those others with seeds four times too large and set a quarter of an inch apart in the berry? We repeat that they are frauds, and compared with them, correct pictures of most varieties would appear at a great disadvantage as to size.

Another point worth noting is the fact that the same cut or half-tone is often made to do duty for several different varieties. This practice, like that of exaggeration, militates seriously against the reliability of pictures. We have in mind a catalog received this Spring which illustrates a certain berry with a picture of a cluster, and a few pages farther along a portion of the same cluster is used to represent another berry, every item of this being identical with the first, as far as it goes.

We do not say that we shall never issue an illustrated catalog, for we can not predict what inducements may appeal to us in the future, but we assert positively that if we ever adopt the use of pictures, they will be exact in size and true to name.

Palm Seeds

"Among all the seeds that I have handled, I think Palm seeds are the most uncertain," says a writer in The Horticultural Advertiser. "They arrive at various seasons, and require to be sown as soon as received, and it not infrequently occurs that the seeds perish in transit; but in more recent years they have been better packed. Some years ago I handled some direct consignments of Arecia lutescens, which in appearance were quite fresh and bright, yet they failed to germinate; but later samples, which had been packed in moist sandy loam, germinated readily. Cocos Weddelliana is another which often gives trouble, and Geonoma gracilis may be mentioned. When seeds cost 30s. (\$7.20) per 1000, it is disappointing and costly to have failures. Sometimes failures may be caused through fungus spreading through the cases, or in the seed beds, and if the seeds are thoroughly washed before sowing it may be an advantage. I find the prices for seed of all the most useful Palms are likely to be high this season. Since the large consignments have ceased to arrive at the sale rooms it has made a considerable difference. Those who make direct importations may buy cheaper, but I find that one of the largest wholesale houses quote Kentia Forsteriana at 36s. (\$8.64) per 1000, and K. Belmoreana at 30s. (\$7.20). Palms for which there is not much demand are quoted very low. Phoenix Canariensis being offered at 1s. 8d. (40c.) per 1000. P. rupicola is priced at 16s. (\$3.84) per 1000. In regard to general treatment of the seeds, some growers sow the Ken-

Purple Barberry from Seed

The purple-leaved Barberry is such a pretty shrub, and forms such a beautiful hedge that its popularity is easily accounted for. A single plant of it on a lawn is always admired because of its purple leaves, yellow flowers and red berries.

The fact that it comes true from seed, practically, is much in its favor, as this permits of its being increased rapidly enough to admit of its being sold at a "hedge plant" price, a price that must not be too high.

When seeds of it are imported and sown here, there are always a few green-leaved plants come up among the others. Some think this is evidence of carelessness in the picking of the seed, some having been gathered from green-leaved kinds. However this may be, as the purple one is but a variety of the green one, *B. vulgaris*, and varieties are not dependable from seeds, it is likely that the seeds were picked true and that it is but the reversion of the purple to the green form again.

To form a bushy hedge of this Barberry it needs to be planted young, and carefully pruned from the start. Left to itself, it wants to get tall rather than bushy. This tendency can be kept in check by the pruning referred to; keeping it cut back while its shoots are growing is a great help to bushiness, the side shoots taking the places of the leaders.

Propagators say the best results from seeds come from sowing them in Autumn, soon after ripening; failing in this, to stratify them over Winter, sowing early in Spring.

Avenue of Pyramidal Box

Because of its evergreen character and its submission to many kinds of pruning, the Box, *Buxus sempervirens*, is one of the most useful evergreens the gardener has command of. There is, too, its hardiness to be considered, for in the Middle States it is quite hardy when its new shoots are well ripened by the time Winter approaches. When in low ground, it will often make a growth of shoots quite late in the Autumn, and, as early frosts visit such situations the first of all, it is no way uncommon to find the foliage of these late growths affected by the frost. The Box does best when planted on higher ground, but the plants must be well fed, in order to maintain the deep green color which is such a merit in this evergreen.

There seems hardly a situation the Box cannot fill, from the tub specimens, used to adorn the entrance to a dwelling, to the forming of an avenue, as the illustration represents. Aside, too, from the trimmed specimens such as these uses call for there is that of the natural growth, without a knife being used on them, in which condition they form veritable trees at times.

Their uses in the position our photograph represents is an admirable one. They occupy but the upper end of a lengthy avenue, the borders of which have various flowering plants at different points, some porticoes *Acalypha*, others *Scarlet Sage*; still another, the late, blue-flowered shrub, *Caryopteris Mastacanthus*. The curved setting of the Box represented, as well as the less pyramidal form of the two front ones, conform nicely to the general appearance of the whole planting. Reaching the sun dial on the ascent of the avenue there is a reminder, as it were, to pause and admire the scene in front, and it is one well worth a pause to admire. The Box specimens are themselves worthy of admiration for their healthfulness and good planting; then the vases, balustrade, grotto in front, and general arrangement of all the planting are all excellent. On the right is a large bower overlooking a grand collection of trees and shrubs, the bower so laden with vines, among them the *Clematis paniculata*, that not a portion of its structure can be seen in the picture. There is also *Clematis* on the left hand side of the photograph and, lower down, behind the Box, are several species of *Heaths*, which thrive well in the situation they occupy.

Chinquapin Chestnuts

An interesting shrub, if it may be called a shrub, is the Chinquapin Chestnut, *Castanea pumila*, a true Chestnut, though making but a shrub size. The interest lies in its bearing its nuts when but two feet high or so, though in their wild state they are sometimes found 12 feet in height. The whole of the appearance and behavior of this dwarf is as that of a true Chestnut, which it is. The leaves are Chestnut looking, so are its flowers and its burs. The nuts are small and almost black when thoroughly ripe, pretty to look at as well as good to eat. The latter quality is well known to squirrels, also to mice, which makes it necessary to guard the nuts well, both when stored away and when sown in the nursery. To prevent field mice getting them it is best to sow the nuts in boxes rather than broadcast in the open ground, for should mice find them out not one would be left by Spring.

To both young and old a hush of the Chinquapin bearing burs of Chestnuts is always of much interest, and to many it seems impossible to convince them that it is as much a Chestnut as the big tree of fifty feet or more in height. Both as a nut bush and as an ornamental one this Chinquapin should prove a good one for nurserymen to keep.

Burning Bushes. Euonymus

Botanists now give us three native *Euonymus*, having made a division of *E. americanus*, which they call *obovatus*. This latter is the prostrate growing sort common in many parts of the country. It is often supposed that this is the same as the upright form, the latter having started on an upward growth, as it is known the Japanese one, *radicans*, will do at times.

The two, granting they are two, and the well known shrub, *E. atropurpureus*, are beautiful shrubs to have in collections on account of their brilliant red seed pods and seeds in Autumn. The flowers are greenish white, of no distinction; the pods which follow maintain a green color until Autumn when they change to a dull red, becoming of a deeper color later on when they burst open and display their scarlet colored berries. These berries are suspended from the pods by a mere thread but they do not fall until quite late in the season.

E. americanus is entirely different in foliage, fruit and general appearance from *E. atropurpureus*. If in no other way it could be readily distinguished by the warty appearance of the seed pods, as the pods of *E. atropurpureus* are quite smooth.

Avenue of Pyramidal Box (*Buxus*)

Cryptomerias Need Rich Soil

When in good soil there is no more desirable evergreen than a young tree of *Cryptomeria Japonica*. With good soil to encourage it it makes vigorous shoots, with dark green foliage, and of itself forms a tree of a pyramidal outline, all of which forms a beautiful picture. When in poor soil, as it is sometimes planted in, it would hardly be thought to be the same tree, so changed for the worse is its appearance.

This tree has been known in Philadelphia collections for half a century or more, and on some grounds surrounding old residences large trees of it are to be seen, 30 to 50 ft. tall. So far as hardiness goes, it is quite hardy in this locality. In greatly exposed situations young plants of it become badly browned in severe Winters, but no more than the red Cedar and the Hemlock Spruce does, and both of these are native trees. Hemlocks on exposed hills will have their branchlets killed if the side gales sweep them, so that whether an evergreen be native or foreign it should never be planted alone in a bleak situation. Set the *Cryptomeria* two or three near each other, or in company of other evergreens, if the position be one where wintry blasts will meet it. Those who straw up this evergreen in Winter when it is young are wise. It insures it from injury from gales, also makes sure of its foliage being of as good a green color in Spring as it was when it was covered up in Autumn.

Although a Japanese evergreen, plants are easily had from European nurseries, and such plants as have been several times transplanted, making it possible to import them with a ball of soil attached. Seeds are easily procured as well, and as seedlings grow quickly it is a better way to increase stock than the older one of rooting cuttings of them, the only method of increase in older days.

Budding Lilacs

As is the case with all kinds of nursery stock, where a dozen was called for a few years ago hundreds are wanted now, calling for the propagation of it in greater quantities than was ever known heretofore. In the case of Lilacs the old way of increasing them by off-shoots and dividing of old plants would never answer for providing the want of today, which has caused the very general plan of using the California Privet as a stock on which to bud the Lilac. This Privet makes an excellent stock, every bud growing, practically, and the stock is strong enough to force a good growth of the Lilac. When this stock, the California Privet, is used, after the buds have taken the plants when dug up should have all the buds of the Privet cut out that are below the bud, to prevent their growth mingling with that of the Lilac, but it is in the favor of the Privet that it is so readily distinguished from every variety of Lilac that there is no danger of one being mistaken for the other.

This is the season to be preparing for the budding by securing stocks of Privet. There is no trouble in doing this. A lot of good one-year plants set out in Spring will be strong enough for budding when Autumn comes, the buds being set just high enough above ground to allow of budding and tying. September is a good month for budding on the Privet stock, for if in good soil the plants grow quite late, allowing of the sap running and the bark parting to admit the bud almost to the time of the approach of frost.

To propagate Lilacs without budding, suckers have to be taken from old plants; layers can be made, and pieces of root cut into lengths in Spring and set out in rows in the nursery, all of which plans give more stock.

Seedling Lilacs do not come true from seed, but many of them prove good sorts, and any one having objection to the Privet stock could use the seedlings to bud on instead.

California Privet

California Privet is still the leading hedge plant, because nothing has yet been produced to surpass it.

I have an extra large stock of two-year-old plants, in all grades, to offer for Spring shipment. This stock is well branched with plenty of fibrous roots.

I can compete in price, quantity and quality with any reliable grower.

Hartford, Conn.

The past week has been a busy one for the florists, a large amount of funeral work having been done. Valentine's Day brought with it an extra demand for flowers, and dealers had all they could attend to for that event; some of them employed extra help and extra teams to deliver. Violets were most in demand and thousands of them were disposed of; perhaps the price was an attraction to purchasers as they retailed everywhere at \$1 per 100. There was an ample supply and they were fine in quality. The double Violet has the call here; there is no demand whatever for the single kinds. There was a good supply of all kinds of flowers for this day with no advance in the prices. Roses sold well at \$1.50 and \$2 per doz. Carnations, 75c. per doz. Daffodils, Tulips, Roman Hyacinths, and Paperwhites, 50c. per doz. Lily of the Valley, 75c. per doz. Sweet Peas, \$1.50 and \$2 per 100.

Vincent H. Olmstead, head clerk for John Coombs, met with a painful accident last Friday while he was decorating the Opera House at Thomaston, Conn., for a banquet. He was upon a ladder and about twenty feet from the floor, when the man who was holding it let go; the ladder slipped and Olmstead fell to the floor. No bones were broken, but Mr. Olmstead was so bruised that he was unable to get back to work for several days.

J. F. Coombs.

Cincinnati

Friday, Feb. 11, witnessed one of the heaviest falls of snow that Cincinnati has had in 40 years, ten inches on the level, which was something remarkable for this section of the country; in fact, this has been what we may call an "Old fashioned Winter." It is also remarkable that the stock of flowers has continued to come in as plentifully as it has for the past two months.

Stocks at date are cleaning up nicely every day, and Valentine's Day created quite a little spurt for Am. Beauty, Violets and Sweet Peas; considerable funeral work is also around. So far, with the advent of Lent, we have seen no special difference in the demand, and from now on, as the days are lengthening, we can look for better goods.

Carnations are selling at \$2 and \$3 per 100. Am. Beauty from 50c. to \$5 per dozen. Maryland, from \$6 to \$12 per 100. Maryland about the same. Callas from \$10 to \$12 per 100. Violets, 75c. to \$1 per 100.

B. P. Critchell, former Park Supt., has been confined to his house for several weeks from had colds, etc., but is able to be up and around again.

Very little is doing in the flower market during the Winter season, but it will soon be a busy spot.

C. P. Dieterich & Bro. of Maysville, Ky., are shipping in some very fine single Violets.

Geo. Corbett of College Hill is another grower of fine single Violets.

George & Allan of Hyde Park are now sending in some very good L. longiflorums.

Lou Kyrk handles the stock from E. T. Gray of Richmond, Ind., who grows a miscellaneous assortment of stock; this concern is noted for good quality.

Samuel Batson of Kalamazoo, Mich., is the man to grow the novelties, Old English Wallflowers, Forget-me-nots, Baby Primrose, Snapdragon, etc.

H. Schmidt & Co., of Oxford, O., are sending the writer some very nice Gypsophila, (Maid of the Mist); it sells at 50c. per bunch.

These little novelties are sought after by the stores to fill in with their other goods, and it pays the grower very well for the little space it takes.

Tom Hardesty is superintending the decoration of the Horticultural Hall, where the S. A. F. held their trade exhibit last August; it is being decorated for the automobile show. J. Chas. McCullough furnished the wild Smilax, 150 boxes. This exhibit of "Honk" wagons will probably be one of the finest ever held here, as every machine of the different makes will be shown. It will be a society event, and will undoubtedly help the flower business. Dr. Bonafide, one of our eminent surgeons, is president of the Automobile Club, and Mr. Hardesty will undoubtedly see to it that there will be some flowers used.

E. G. GILLET.

Almost Sold Out

Have you sent us an order for your stock of Carnation Dorothy Gordon? Easy to put it off—but our supply is limited, orders are piling in every day, and some of you who are planning to grow this splendid Carnation for your trade this year are going to be disappointed!

Carnation Dorothy Gordon

stood away up at the top of the list. We know we "harp" a lot about its merits, but when you know this grand new variety as we do, you'll be enthusiastic, too. Flowers fragrant and uniform in color—a little darker than Pink Enchantress; very large—size 3 inches or more in diameter—buds of good substance and very lasting. All these features spell profits for growers of Carnation Dorothy Gordon—double profits, for the plants

Joseph Heacock Company, Disseminators, Wyncote, Pennsylvania

This magnificent flower made a big "hit" at the Pittsburg meeting, but that didn't surprise us any, for a great many of our friends in the trade long ago learned that for real, substantial profits

Indianapolis

And now for Easter!
John Hitz is marketing fine Sweet Peas.

Walter Bertermann has returned from a visit to the Chicago flower shops.

Albert Kempe is making arrangements for stocking his enlarged plant.

B. F. Hensley of Knightstown is shipping much good stock despite the serious handicap caused by his fire this Winter.

John Heidenreich is fortunately busy with funeral work.

Shasta and James Whitcomb Riley are both finding many friends in the Carnation world.

Harry Jones is on the sick list.
The Park Board is figuring on moving the propagating houses and adding additional glass.

Tomlinson Hall Market is a clearing house for much fancy stock. Business is reported good.

Huntington & Page are having alterations made in their N. Delaware st. store.
I. B.

St. Louis

E. H. Riehl of Alton, Ill., and Mr. and Mrs. M. B. Leach of Taylorville, Ill., called on the trade.

Frank Fillmore and E. W. Guy paid a visit recently to their friend, J. F. Ammann at Edwardsville, Ill., and found the place in tip-top shape.

Park Commissioner Scanlon says that the Park Department will use over 100,000 California Privets this Spring to replace the hedges that have been frozen out this Winter. The nurserymen, too, say they will need lots of Privet to replace the many frozen hedges throughout the city this year.

Rufus J. Lackland, who for the past 20 years has been President of the Board of Directors of the Shaw Gardens, has resigned his position owing to old age; Mr. Lackland is 90 years old and is president of the Boatman's Bank.

Jules Burdet has moved all his stock from the Veuter ave. place to the old Michel greenhouse, which was recently bought by Geo. Walhart, for whom Mr. Burdet will run the place.

Along Grand ave. the florists are making their usual fine show. Geo. Walhart's is a great attraction. Mrs. M. M. Ayers has new lights placed in her windows and they are as bright as day, showing a fine display. Egging, Windler, Bergetermann and Beyer all are attractive spots in their respective neighborhoods.

The Bentzen Floral Co. on North Grand ave. is showing some fine plants in their new show house, so is the Tower Floral Co.

The directors of the Missouri Crematory on Sublette ave. have accepted the plans of Wm. Bouche, the landscape gardener, for a sunken garden on the order of the one surrounding the Crematorium in Hamburg, Germany. Mr. Bouche says the cost will be \$5000, and work will be begun just as soon as the weather permits. Mr. Bouche is about the only man here who could handle a job of this kind satisfactorily.

The Englemann Botanical Club at its meeting held on Monday evening, Feb. 14, in the Central High School Building, had a large attendance. The meeting was held in the Botanical Laboratory; the feature of the meeting was a paper by E. G. Arzberger of the Shaw School of Botany on "Root Tubercles of a few plants and some facts regarding the Fungus which cause them." Mr. L. P. Jensen, gardener for the Busch estate, is now its secretary and treasurer. Mr. H. P. Chandler presided over the meeting.

HENRY SCHRADE,

Saratoga Springs, N. Y.

Dear Sir:—We received the cuttings of "Canary Bird" this day in good condition, and are also well pleased with the appearance of the blooms you sent us of this variety. In fact, we would like to increase our order, as this carnation looks very good and we would like to grow a fair batch for trial next season. The blooms which you sent us are at this writing in good condition, they having expanded considerable and it shows to be a good keeper. Can you ship us at an early date an additional quantity of cuttings?

An early reply would be appreciated.

Yours very truly,

L. J. REUTER,

THE AMERICAN CARNATION

Price \$3.50. Send for Sample Pages

A. T. DE LA MARE PTG. & PUB. CO. Ltd., 2 to 8 Duane Street, New York

Syracuse, N. Y.

We are experiencing a genuine old-fashioned Winter here. There has been almost continuous sleighing since Thanksgiving. There have been many days when the glass registered zero; 20° below is the lowest so far.

Business has been very good, as society people have been very active; funeral work, too, has been very plentiful. The deaths of the engineer and fireman of the 20th Century express train, both well known and highly respected, brought more orders than has been received for some time.

Stock has come along slowly, owing to so many dull days, and very little has gone to waste.

Many of our wealthy citizens have gone South to escape the cold, and will not return till Easter.

St. Valentine's Day makes very little trade for the florists here, compared to some places. Violets are the favorite flower.

Burt, the florist, has a very neat and attractive electric sign, the first of the craft to adopt that growing way of advertising.

John Brenner, whose father was one of the pioneer florists here, has given up the florist business, and devotes his time to cultivating Mushrooms, for which he finds a ready sale.

Louis Guillaume, who a few years ago was the largest wholesale grower of Carnations hereabouts, has given up that branch and now devotes his houses to Lettuce and other vegetables, and claims to be making more money, as he sells on a cash basis and says he has no bad debts.

Walter Meneilly & Son have a splendid crop of remarkably fine double Violets.

During Lent the florists find a good sale for flowering plants, as people remember their sick friends more than at other times.

The prospects for a heavy Easter trade is very bright, and all are preparing to meet it.

Utica, N. Y.

Wm. Mathews has as fine a lot of Orchids as is to be found. He now has 10,000 plants, some of very rare specimens. He showed us one specimen that came in a case about a year ago that he has not been able to find any record of anywhere, or name. He has been growing Orchids for a great many years and he says it is entirely new; it is very beautiful. I will not try to describe it; he would be pleased to know more about it, it is surely very valuable. Carnations at this place are looking good and lots of them. He is cutting plenty of Daffodils, Jonquils and Tulips, and most all kinds of Spring flowers, for which he finds a good demand. He has a very fine lot of Azaleas for Easter. He is growing only the single Violets, which are fine. He has two large Camellias, regular trees, from which he has cut a great many flowers this Winter, and he has found a ready sale for them at good prices. This talks like old times. Harry Mathews was very busy, when we called, with a large funeral order, but we were very well taken care of by William. Everything here looks fine for Easter and they are expecting a big trade.

We called on Wm. P. Pfifer, but found that gentleman away. We took the liberty to look the place over. Carnations here are the thing and are done well. His large house was very fine and looked as if he would be "in it" for a long time to come.

Peter Crowe, I believe, is on the way to recovery. He is now at Clifton Springs, N. Y., where he has been for the past two weeks. It is the wish of all his florist friends that he will soon be able to come back to Utica in perfect health.

W. A. Rowlands of Whitesboro, N. Y., the Carnation King, has returned from the Pittsburgh show chuck full of what he saw, and boiling over with enthusiasm in regard to the new sorts that he saw. He grows Enchantress, rose pink and white, Apple Blossom, Mrs. Lawson in white, pink and variegated, Beacon, Winsor, White Perfection and Pink Delight. He is having a big cut now; one party takes all he grows.

Stump & Walter Co.'s representative was in town a few days ago.

One of our very popular aldermen died very suddenly, and his death created a big demand for flowers.

Lent has come and there are no parties at present; the poor florists will have to wait now for Easter, for which prospects are good.

Waterbury, Conn.

Waterbury, known as "Brass City,"
has about 75,000 population and three
retail stores, all well located near the
center of town. Business has been ex-
cellent since the beginning of the Fall
season, and the Christmas holiday trade
was unusually fine, being far ahead of
previous years. Two of the stores are
open evenings until about 9 p.m.
Alex. Dallas has two retail stores, one
at 26 No. Main and the other at 119
Grant at, near postoffice and railroad

New Seedling Rose Radiance

A seedling from Cardinal, a brilliant
rosy carmine with opaline tints in the
open flower. The form is fine, large,
with cupped petals, bud long, brilliant,
radiant, with extra long stems, a con-
stant bloomer, fragrant, foliage abund-
ant and of splendid substance.

2½-inch pots, \$18.00 per 100; ready for
delivery in April and May

station; also three ranges, comprising
some 100,000 sq. ft. of glass. These are
located on Union st., West Side Hill,
and cor. Willow and Ludlow sts. Mr.
Dallas did have another store connected
with the Union st. range but closed it
during the past season. He has one
very good rule in practice at his several
greenhouses, which is that no stock is
to be sold at any place except the two
stores; all houses are closed promptly
at 6 p.m. This rule allows the assistants
to devote all their time to care of the
ranges and permits all employees to go
home at a stated hour. At one of the
stores a customer recently asked for
"Shredded Wheat"; what she wanted
was a "sheaf of wheat." Mr. Dallas
has just returned from a short visit with
his son Walter who is at Saranac Lake,
N. Y., coming back in time to decorate
and attend as a member the Waterbury
Business Men's Association banquet.
Mr. Thos. Newberry, well known to the
trade about New York, is foreman for
Mr. Dallas.

Mr. John Saxe of Saxe & Floto,
205 So. Main st., has been in the local
hospital for past 12 weeks, first to un-
dergo an operation for appendicitis, then
having other troubles develop; he is
now recovering and expects to soon be
back on duty. This firm have about
35,000 sq. ft. devoted to general line of
stock for store trade and also force
large quantities of Tulips. They re-

cently erected a large house in which
are grown Carnations.

W. F. Beerbaum of Baldwin st. has
considerable glass in which he does his
share of funeral work and handles con-
siderable trade. One house was built
this past Fall in order to help out his
increasing trade.

Spencer, Mass.

Frank J. Prouty has some 5000 sq. ft.
in which he grows Carnations and mixed
stock. A Safrano Rose bush of large
size has a prominent position in one of
his houses and is over 30 years old. Mr.
Prouty came here some nine years ago
and took the greenhouses formerly owned
by Hoyle. A good trade in funeral work
is reported.

Spencer is 12 miles west of Worcester,
reached easily by trolley, and has a popu-
lation of about 8000. It is a shoe manu-
facturing town to some extent.

Chas. H. Green has been here for the
past 15 years and does a nice retail busi-
ness, with occasionally some wholesale
trade. He erected one Violet house and
an office building during the past Fall,
and finds that his 8000 sq. ft. is getting
too small for his needs. A recent order
was a pillow, on which the customer in-
sisted in having the words inscribed
"Good-Bye, Steve." A general line of
cut and bedding stock is being grown at
present.

Rochester, N. Y.

While many report good business for St. Valentine's Day, the volume can hardly be conceded to have been equal to that of previous years, owing, no doubt, to the fact of it coming in the season of Lent when but few parties were going on; also to the severe snowstorm which passed over the city the latter part of the week, not only encumbering transportation to a great extent, but preventing many from coming out; a great deal of transient business was lost in this way. Violets and plants were the most in demand, as usual. Red Roses would have sold readily, but the supply fell off just at the time they were needed. Red Carnations, however, were in good supply, but were not in great demand. However, most of the dealers feel satisfied and there is no doubt that with judicious advertising on the part of the retailer St. Valentine's Day would rapidly become one of the great days of the year for the florist to look forward to.

The Carnation market is rather demoralized at present, the supply being too much for the demand; especially is this the case with the colored sorts, such as pink and red Lawson; in fact, it seems that these two Carnations have had their day, and that those who grow them in quantity would do well to con-

sider their retention for another year, and look about for something better to take their place. White Enchantress and Winsor are the leaders in demand, and if the stock is good sell readily; but there is so much that is not good, but it makes one wonder at times whether the Carnation was improving or deteriorating.

H. E. Wilson reports excellent business for St. Valentine's Day, he having to install two extra deliveries in order to handle the extra business.

The enthusiasm for bowling still keeps apace. About twenty were on hand last Thursday night, and the scores were much better; in fact, if all goes well they will be good enough to publish next week. The Club will meet at Laing's Alleys, North and Wells sts., next Thursday night. Four alleys will be used and it is expected that everything will go along much faster than was the case when using only two alleys.

The monthly meeting of The Association was held Monday, February 14. About 40 members were present. The principal business of the evening was the election of three trustees, the following being elected: Charles Suhr, F. R. Schlegel and J. O. Pridmore. Owing to the absence of the president the report of the banquet was held over until next meeting. Card tables are now in the room, and the members are free to go and come at leisure. Keys may be procured from the Secretary on payment of 25c.

It is earnestly desired that the members will take advantage of the room.

H. B. STRINGER.

Washington, D. C.

The Lenten season, while exerting a sluggish influence upon trade generally and not usually embracing St. Valentine's Day as was the case this year, seemed in no particular way to prove a drawback to the day in question. The various stores about town were decorated with hearts in many pretty and attractive designs, and floral baskets of medium size formed no mean part of the day's sales.

So far as "Old Sol" was concerned, the ground hog was afforded every opportunity to take a good look at his shadow, and while the old prophecies in that connection have not received verification each day, there has been some hard weather. The night of Feb. 6 was a record breaker for this section, and by reason of the severe cold and high wind quite a number of losses were sustained among the growers, especially those operating the smaller places.

Mrs. Elizabeth V. Schmid died Feb. 9 at the residence of her son, Edw. S. Schmid, 712 12th st. N. W., with whom she had been making her home. The interment was in Rock Creek Cemetery. Mrs. Schmid was born in Switzerland in 1828, and 22 years later married Louis Schmid in her native town and sailed for

America. Her husband started the first paper box factory in Washington, and was among the pioneers in the manufacture of wire designs for florists' use. He died about 16 years ago. In spite of her advanced years Mrs. Schmid was very prominent in a large circle of acquaintances and a charter member of the Swiss Ladies' Society here. She is survived by three daughters, Emma and Alexandria Schmid and Mrs. Kate Tayman, and two sons, Edward S. and Frank Schmid. The family, since its arrival here, has enjoyed the greatest popularity, especially among florists, and they have received letters of condolence from all parts of the country.

JAS. L. CARRERY.

New Bedford, Mass.

The cut flower trade has been fair the past week. Funeral work has been very good, using up lots of seconds; Carnations of good quality are coming in; these retail at 50c. and 60c. per doz. Roses, \$1.50 and \$2 per doz. Violets, \$1 per 100. Sweet Peas, \$1 per 100. Some nice Tulips are coming in, at 60c. per doz. Paperwhites, Daffodils, etc., are also in evidence at 60c. per doz. Mignonette, 50c. per doz. Above are retail prices.

Napoleon Lemay is growing large quantities of Sweet Peas, which he is selling to the florists at extremely low prices.

Wm. E. Mosher on North st. is picking large quantities of fine single Violets, which had a ready sale at all times.

E. H. Chamberlain reports the sale of plants as fair; the cut flower trade has been somewhat slow with him the past few weeks.

The weather the past week has been cold; everyone is getting ready for Easter; we wish all good luck.

HORTICO.

The effect of Bordeaux mixture on foliage depends very largely upon the weather; the copper being rendered soluble by the action of the atmospheric moisture, so that chemically identical preparations may scorch badly or show no evil effect as the case may be. The temptation in the first case is of course to blame the maker, but this, it should be recognized, might be a rank injustice.

TO USERS OF

APHINE

Please note the following modifications in directions for applying, which, if carefully followed will prove effective for the destruction of all insects. Intended

For Green, Black & White Fly,
1 part Aphine to 35 to 40 parts water.

For Red Spider, Thrips & Slugs,
1 part Aphine to 20 to 25 parts water.

For Mealy Bug, White & Brown Scale,
1 part Aphine to 12 to 15 parts water.

New Methods of Plant Breeding

BY

GEORGE W. OLIVER, Plant Propagator

U. S. DEPARTMENT OF AGRICULTURE. BUREAU OF PLANT INDUSTRY—BULLETIN No. 167. B. T. GALLOWAY, CHIEF OF BUREAU.

For the plant breeder, whether the pursuit be a life endeavor or simply having to do with one subject, or be he scientist or plain every day grower, we do not know of any work on the subject which possesses greater interest or whose teachings may be more readily followed and assimilated than those herein given by Mr. George W. Oliver.

When one contrasts this modest little Bulletin, so much of the contents of which are entirely new, and containing such a valuable repository of information, with the much lauded productions emanating from certain other sources, the reader will freely admit that, through its Bureau of Plant Industry, the U. S. Department of Agriculture is doing grand work, and that, enlisted in its service, are to be found some of the most capable investigators in the country of whom Mr. Oliver is a prominent type.

We are tempted to reproduce this Bulletin in full, but must forbear. Copies can be obtained by addressing the Superintendent of Documents, Government Printing Office, Washington, D. C. The price is not stated, but probably will not exceed 25 cents.

To his "Introduction," the author says:

A few years ago Dr. B. T. Galloway, Chief of the Bureau of Plant Industry, mapped out some plant-breeding work for the writer which involved crossing varieties of Lettuce, Alfalfa, and Cowpea, and also certain species of Poa, Trifolium, Melilotus, etc. The work in the beginning presented many difficulties which have since been overcome, and it is now progressing satisfactorily.

The improvement of plants by cross-breeding varieties is gradually becoming an important factor in the culture of many of our field and garden crops. The majority of intentional crosses and hybrids made in the past represent work which has been easy of accomplishment. The more difficult subjects have been passed by or at most the efforts of breeders with the hitherto refractory genera have to a large extent been nullified by natural obstacles in the path of success.

The only difficult part of plant breeding lies in knowing just how to make the most of a cross or hybrid which has been secured. The literature on this subject which has appeared during the last few years is apt, unfortunately, to lead the beginner and even the practical breeder into a maze, and he may conclude that the subject is too complex for comprehension.

This should not cause discouragement, however, because the mission of the plant breeder is to produce varieties which are in some measure improvements over the old ones, and each advance made will tend toward that perfecting of plant life which will insure better products for man and the domestic animals.

The present contribution to the subject deals not with laws, but with methods used by the writer in accomplishing what have hitherto been considered impossible or difficult crosses, and they may prove helpful to others engaged in the same line of work.

Until recently it has been found impossible to cross many plants owing to the fragile nature of the sexual organs. This difficulty has been removed, and the process whereby it has been accomplished is here described for the first time.

There are numerous plants, also, both ornamental and economic, the flowers of which are so small that their stamens are very difficult to remove in the process of emasculation, and this fact has undoubtedly contributed largely toward delaying the rapid improvement of many flowering plants, fruits, and vegetables by cross-breeding and hybridizing. Mendel, who did so much in his particular line, worked with two genera only: *Pisum* and *Hieracium*. The former is easy to manipulate, but all the species of *Hieracium* present difficulties in emasculation which by the ordinary methods are practically insurmountable. In fact, Mendel found them so great that he did not finish his work on this genus. Nevertheless, in the flowers of the *Hieraciums*, and many other plants regarded as equally difficult, the pollen can be thoroughly removed, and with as great facility as in those of the Rose or any other flower in which the reproductive organs are large and easily handled. This new process, which may be called "depollination," is the removal of pollen from the stigma before fecundation has taken place. It is applicable to flowers in which emasculation is impracticable because of the minuteness or delicacy of the floral organs. It is hoped that this newly found method of preventing fecundation by undesirable pollen will be instrumental in furthering the projects mapped out by the ever-increasing number of plant breeders.

The writer has worked on several genera of the Composite with complete success. The method here described can be used not only with the Composite, but also with all flowers having reproductive organs too small to be successfully manipulated by the ordinary methods of emasculation. The use of the method does not stop here. It can also be applied to the stigma of larger flowers

when there is any doubt whether pollen has recently gained access to the stigmas previous to artificial pollination.

The writer then describes the "Origin of the New Methods of Plant Breeding" as perfected by him:

During the Spring of 1903 work was begun on the crossing of certain varieties of forcing Lettuce. When the plants came into flower it was at once apparent that the problem of emasculation was a knotty one. The flower heads are small and the florets themselves will scarcely bear handling because of their very fragile nature. In one or two instances the stamens were removed, but always with sufficient injury to the remaining parts of the flower to cause it to wither. A flower of Lettuce is in fact about as difficult to manipulate by the usual methods of emasculation as it is possible to conceive.

When the flower head expands, the anthers have already dehiscent, and the unexpanded stigmas are covered with pollen. The stigmas begin to expand at the tips, and simultaneously masses of pollen fall on the inner surfaces, to which the pollen closely adheres. In the bud stage the parts of the floret are so easily damaged that endeavors along this line of attack were quickly abandoned. Having read somewhere that pollen grains would adhere readily to the end of a piece of sealing wax previously rubbed briskly, wax was tried, but without success. The idea then suggested itself that the pollen might be successfully removed with a dampened camel's-hair brush. This plan was also a failure, because with the operation ever so carefully performed some of the pollen grains were left on the stigmas.

Success finally came, not with the aid of a camel's hair brush or sealing wax, but with the aid of the garden hose. A robust plant of the Grand Rapids variety of Lettuce opened 15 flowers one morning, and within as many minutes every flower was successfully depollinated. The metal attachment on the end of the hose was cut off; a piece of hose of smaller diameter was placed in the end of the other hose; then a piece of soft rubber tubing of small diameter was placed inside the second piece of hose and the water turned on just enough to do a little more than trickle. By squeezing the end of the rubber tubing a very tiny jet of water was secured. This was trained on the Lettuce flowers, and perfect depollination resulted.

After the tiny jets of water had played on each flower head for a few seconds not a trace of pollen was to be found and the pistils stood out from the ligules strong and unharmed. Small pieces of blotting paper freely applied to the florets edgewise soon absorbed all of the water. Pollen from the flower of another variety was then applied. In each of the 15 heads of flowers, seeds matured, and all of the resulting seedlings proved to be intermediate between the two parents.

In depollinating, the flower head is held securely between the thumb and the first and second fingers, and in pollinating it is similarly held. In applying the pollen to the stigmas one head of flowers from the pollen bearer is used, or more than one if sufficient pollen is not deposited on the stigmas. Before applying the pollen a few or all of the ligules should be cut off from the pollen-bearing head of flowers, leaving only the pollen-covered stigmas, and the remaining part of the head applied to the flowers which have been depollinated, working it among the stigmas with a circular motion.

In pollinating Lettuce flowers and those of other genera in this division of the Composite there is not the same necessity for depositing the pollen on the stigma of each floret as there is on the flowers of the plants of the other divisions, because the Lettuce flower heads close very soon after pollination. This act of closing will almost certainly cause the slender stigmas to become well covered with pollen because, in the act of pollinating, the ligules are apt to harbor many grains of pollen. * * *

Experiments with Lettuces are then related.

The tools required for depollination and emasculation are described and figured, as also the various devices used in depollinating.

Emasculation is held to be a necessary preliminary to successful plant breeding. The author then shows how to overcome obstacles in emasculating the flowers of Composite, and how hybrids and crosses of composite flowers may have originated in the past. It is quite possible that a long continuous shower will wash the pollen from the stigmas of a composite flower and that as soon as the sun shines these flowers are visited by insects whose bodies are occasionally covered with pollen obtained from florets of other varieties or species which open and shed their pollen, either before or subsequent to the pollen-removing shower of rain. It is certain that cross-fertilization may take place in this way. Those species and their varieties having infertile ray florets can be crossed only when the disk florets, containing both male and female organs, are used as the seed bearers. All of the work in breeding composite flowers is rendered simple by the depollinating method. Especially is this the case with *Chrysanthemums*, *Asters*, *Dahlias*, *Marigolds*, *Cineraria*, *Cosmos*, *Zinnias*, *Lettuce*, and with all the numerous genera having infertile ray florets.

Next in order is given the preparation of seed and pollen bearing parents, and great stress is laid upon the necessity for absolute isolation from insects of the plants

from which pollen is to be selected for use in crossing if a successful outcome is to be had.

We feel impelled to reprint in full Mr. Oliver's observations on "Crossing in Large and Small Numbers;" it is most interesting:

A matter of importance in plant breeding and one which does not receive the attention it deserves from the practical breeder is the grouping of varieties into at least two classes for somewhat different treatment in crossing. In the first division all the plants we now call varieties, which come true from seed, no matter how they originated, may be termed artificial species. This division includes garden and field crops, such as Lettuce, Cabbage, and Turnips; Radishes and others of this family; Onions and other plants of the same natural order; Carrots, Celery, Parsley, and Parsnips; the cereals; varieties of Alfalfa, and many others which come true from seed and are only propagated sexually. With these there is no necessity for raising many individuals of the first generation. If the breeder succeeds in getting a desirable cross between two well-defined kinds, a few individuals of the first generation are enough, provided the work of emasculation or depollination and the application of pollen to the flower so treated is not carried out in a perfunctory manner. The individuals of the second generation, if they are sufficiently numerous, will give the variations from which to choose selections for perpetuating.

The second great division includes those plants which do not come true from seed, or at least have never been bred to reproduce in that manner. The treatment in crossing is different from that which should be accorded the sexually propagated varieties, in that large numbers of the first generation are necessary, so that the chances of securing improved forms will be greater in proportion to the number of seedlings raised from any one cross. Nearly all fruit and nut trees, Grapevines, hush fruits, Strawberries, and Potatoes are included in this class; also many florists' flowers, such as Roses, Carnations, Gladiolus, Dahlia, Fuchsia, Chrysanthemums, and Pelargoniums. When the desired improvement is attained by crossing any two varieties, one plant of the improved form is sufficient to start with, and that is increased vegetatively, i. e., by cuttings, budding and grafting, layers, bulblets, cormlets, etc.

In this second division, when breeding improved forms by crossing is attempted we look for results in the first generation; consequently, the number of flowers pollinated must be large, so that the seed ripened will be in quantities large enough to give the necessary variation in the resulting seedlings. The plants mentioned above which are propagated asexually are all hybrids, crosses, or sports which have never been bred sufficiently to come true from seed; thus, when any two plants of distinct varieties are crossed we never can tell exactly what the progeny will be like, and it is as a rule so very varied that if we get one seedling in five thousand possessing characters superior to either parent we are doing well.

The notes on "Hybridizing Species" and "Grass Hybrids," show much painstaking effort.

To the florist that portion of Bulletin No. 167 which deals with the plants familiarly known to him will naturally be of most interest. The author gives results of experiments in crossing cultivated varieties on natural species, in Pansies and Dahlias with successful results.

Under the heading of "Methods of Emasculating and Pollinating Common Flowers," are given (1) The essential organs of the flower; (2) Preparation of flowers to be pollinated; (3) Removal of the anthers; (4) Securing pollen; and (5) Applying the pollen to the stigma.

Much of the interest of this Bulletin lies in the fifteen clear and illuminative plates which are given, and which serve to reinforce to a noteworthy degree the lessons conveyed in the text.

Specific notes on many florists' flowers are to be found scattered throughout this Bulletin.

Elder Wood Dried Makes Lasting Stakes

Mr. Meehan has remarked that it is a mistake to think that Willows need wet situations. As a matter of fact the common green and red Willows will thrive on dry sandy soils. On our own place we have used Willow sticks for dividing the Sweet Pea selections; these sticks invariably take root and, if not checked, will make strong growths from 4 ft. to 7 ft. high, and this from roughly cut sticks, one foot in length, stuck in the ground in February. I know of no tree that roots so readily and which makes such wonderful growth in seven months. These young plants make extraordinary roots, many running over two feet.

The only tree that approaches it for easy rooting is the common Elder. This can become an abomination, and in one garden I tended it caused me to use much bad language, for if by chance any bits of wood got to the ground an Elder plant was sure to appear. On one occasion I used a 2-in. Elder stake as a support for a fruit tree, and it took two years' constant removal of growths before that stake gave up the ghost. Incidentally, I might mention that Elder wood, if thoroughly dried out, makes wonderfully lasting stakes for driving into the ground. Many old Kentish men say there is no wood that lasts longer than Elder.

T. A. W.

New York Florists' Club

A regular monthly meeting of the New York Florists' Club was held at the Club's rooms in the Grand Opera House Building, 23d st. and Eighth ave., on Monday evening, Feb. 14, with a large attendance. It being a "Ladies' Night" quite a number of ladies were present. A splendid program of entertainment was provided, and an excellent lunch was served. It was also Carnation night, and there was an exhibition of Carnations which has hardly been exceeded in quality on any occasion in New York.

President A. L. Miller occupied the chair, and after the reading of the minutes of the previous meeting called upon Walter F. Sheridan, as chairman of the dinner committee, for a report. Mr. Sheridan said that his committee had selected the Fifth Avenue Restaurant, Broadway and 23d st. as the place where the dinner would be held, and the date settled upon was March 17. The restaurant, he said, was in the new building on the site of the old Fifth Avenue Hotel, and the dining room the Club would use was on the ground floor, just off Broadway. It was large enough to accommodate about 400 people and the tables would be arranged to seat from four to eight persons. The price of tickets would be for gentlemen \$4 and for ladies \$3, and reservations for tables or seats would be made in the order of receipt. A suitable entertainment during dinner is to be provided. The reason for making the date March 17 was that at that time the American Rose Society would be holding its annual convention in New York. Mr. Sheridan said he had been asked, as chairman of his committee, to meet the committee appointed by the Club to arrange for the entertainment of visitors at the convention, with a view to acting conjointly, and he suggested that both committees be authorized to join hands in an endeavor to formulate a plan which should meet the approval of the Club.

Patrick O'Mara moved that the report be accepted and that the dinner committee be empowered to confer with the entertainment committee, as suggested by Mr. Sheridan. The motion being carried, both committees withdrew for conference, and later in the evening Mr. Sheridan, as a result of the conference, made a motion, which was carried unanimously, that the dinner committee be authorized to invite to the dinner, as guests of the Club, the visiting members of the American Rose Society.

The following were elected to membership in the Club: Stevens Masur, 236 Fulton st., Wm. H. Kuebler, 28 Willoughby st., and Robt. Hamilton Rutherford, 40 McDonough st., all of Brooklyn, N. Y.

Abe Hanig of Brooklyn was nominated for election at the next meeting. A letter from Morris I. Jacobs was read, resigning his membership, and the resignation was regrettably accepted.

W. H. Taplin of Flatbush then read a paper on "Carnations Past and Present." This, with the ensuing discussion, will be found on another page.

Secretary John Young reported the death, in Wisconsin, of the father of C. W. Scott, an esteemed member of the Club, and President Miller appointed J. H. Pepper, A. J. Guttman and Louis Schmutz, Jr. a committee to prepare a memorial.

At this stage of the proceedings President Miller vacated his chair in favor of J. B. Nugent, Jr., chairman of the entertainment committee, who introduced several musical artistes. Miss Sabery Dorsal gave the "Forest" song from "Robin Hood" and "Every Rose must have a Thorn," very acceptably, showing herself to be the possessor of a voice of remarkable compass. Mr. Russell Kelly gave an excellent cello solo, accompanied by Miss Gillis who also accompanied Miss Esther Moltz in two excellent vocal solos. Miss Barnett gave three capital recitations, and Mr. Blythe a couple of comic songs. Mr. Kelly also played a composition of his own on the piano. Of course every performer was heartily encored. At the conclusion of the first half of the program the ladies were conducted to an ante room where salads, cakes, ice cream, coffee and punch were served by gallant volunteer waiters; and the male portion of the gathering rejoined in a similar manner within the confines of their "canteen," where the *piece de resistance* was a huge joint of beef, which Robert M. Schultz apportioned in a masterly manner.

Exhibits

The Willow Flower Co., Westport, Conn., staged a splendid vase of their new scarlet Carnation, Juanita, and a few flowers of a new variegated variety, something on the order of Conquest. Henry Eichholz of Waynesboro, Pa., had a vase of Princess Charming for which the committee on awards gave a scoring of 86 points. Nic Zweifel of North Milwaukee, Wis., staged a vase of Bright Spot which gained the award of honorable mention. Jos. Heacock Co., of Wyncote, Pa., gained the prize for the best novelty sent out in 1909-10 with a splendid vase of Dorothy Gordon. The Cottage Gardens Co., Queens, L. I. took the prize for the best exhibit of Carnations, with handsome vases of Mrs. C. W. Ward and Alma Ward, the latter also taking the prize for the best 50 Carnations. J. F. Marsden, Far Rawley, L. I. was awarded a cultural certificate for vases of White Perfection and Enchantress. Other exhibitors were: S. J. Reuter & Son, Westbury, R. I., vase of Sangamo; A. N. Pierson, Cromwell, Conn., vase of Pink Delight; White Bros., Gasport, N. Y., vases of Beacon and White Perfection; Salford Flower Shop, Poughkeepsie, N. Y., a vase of variegated seedlings; Wood Bros., Fishkill-on-Hudson, N. Y., vases of White

Enchantress, Lady Bountiful, Crimson Beauty, Beacon, Mrs. T. W. Lawson, Kingston Pet, and Variegated Lawson; A. Demossy, Flatbush, vase of White Enchantress, and Charles Weber, Lynbrook, L. I., N. Y., a vase of his new Carnation Brooklyn. For all these stagings the exhibitors received the thanks of the Club. Young & Nugent, New York, exhibited a St. Valentine's Day floral piece, of cone shape, with hinged cover, designed to contain flowers, tangles or other gifts; it was covered with red Carnations, Orchids and pale green ribbon, and was much admired by the ladies.

European Sweet Pea Notes

The Sweet Pea Annual for 1910 is just received, and like everything else this season is a little behind time. The get-up is similar to last year's annual, but the size has been increased by 16 pages. The contents are amply varied as the following index shows: "A Great Sweet Pea Carnival," by Mr. S. B. Dicks, F.R.H.S.; "Sweet Peas from Cuttings," by Mr. J. Chisholm; "Notes on the Reading Trials," by Mr. Chas. Foster, A.U.C.R.; A Complete Catalog of Sweet Pea Names and Descriptions, compiled by Miss Jessie Cuthbertson and the Hon. Sec.; Report of the Sweet Pea Conference Proceedings, including "Imperfect Seeding of Waved Sweet Peas," by Mr. W. Cuthbertson, J.P., and "Sweet Pea Names and Naming," by Mr. W. J. Unwin; Report of Floral Committee; The Society's Outings; Audit of the London Show, 1909; A Great Sweet Pea Election; Prize Winners at the London Show, 1909; Annual Report and Balance Sheet.

The schedule for the tenth exhibition which accompanies the Annual is drawn up on the same liberal lines as last year, and is certain to provoke very keen competition. For the first time in the history of the Society the exhibition is to extend over two days, July 12 and 13. As the sun does occasionally shine during July, even in London, this will put the value of the flowers for decorative purposes to a severe test.

American members of the N. S. P. S. will receive the Annual on payment of their annual subscription—minimum \$1;—to non-members it will be mailed post free for fifty cents, by C. H. Curtis, Hon. Sec., Adelaide Road, Brentford, Middlesex, England.

The additional privileges are worth far more than the other fifty cents, so I suggest to all readers of these notes the advisability of sending along the nimble dollar and thus becoming full-fledged members, with the privilege of putting the M. N. S. P. S. at the end of their names.

There is no lack of literature for Sweet Pea enthusiasts this season.

"Uncle Robert" is well to the fore with the tenth edition of his valuable book "All About Sweet Peas," which, in addition to a mass of useful information, historical and cultural, contains a full description of nearly every variety in commerce. It is sold at 12c. and 25c., plus postage about 6c., and can be obtained from Robert Sydenham Limited, Birmingham, England. The profits on the sale of this book are handed over to the gardeners' benevolent institutions.

Walter P. Wright's "Book About Sweet Peas" is the work of the highly respected chairman of the floral committee. The book covers a wide range of subjects and is written in a very free and easy style, which will make it equally serviceable in the drawing room or the gardener's shed.

"The Book of the Sweet Pea," by D. B. Crane, is one of the series of "Handbooks of Practical Gardening," edited by Harry Roberts, and published by John Lane of London and New York. It is a very readable and thoroughly practical treatise, helpful alike to the amateur and the professional gardener. The historical notes are very complete and their source is honestly acknowledged, which is not always the case in these days. The seventeen half-tone illustrations are very fine, and the general appearance of the book is highly creditable to the publisher. The published price is 60 cents.

S. B. DICKS, F. R. H. S.

The American Sweet Pea Boom

Everything that is anything is boomed in America, and as Sweet Peas are looming pretty large in these enlightened days they have been subjected to the inevitable, and with the usual result.

Readers of the Sweet Pea Number of the Gardeners' Magazine will naturally inquire how the boom originated, and the object of the present article is to answer the question as fully as the available information permits. So far as the writer is able to learn, there is good reason for believing that its origin was the interest taken by British gardeners who had settled in the Eastern States, particularly Massachusetts, in the important work of Henry Eckford.

Many of these worthies hailed from the Land o' Cakes, and naturally took a sympathetic interest in the achievements of a "blither Scot." The enlightened and important Scotch element in the seed trade of Boston, the center of the movement, was not slow to take advantage of the opportunity thus presented to foster the culture and love of this beautiful flower, and, incidentally, of course, gather in the shekels at the same time. The horticultural societies did all in their power to develop the

interest thus aroused, and the comparative ease with which they could be grown soon filled New England with enthusiasts, and thus started the boom.

Among the earliest and most whole-hearted of the devotees at the Sweet Pea shrine was the Rev. W. T. Hutchins, who was located at that time at Indian Orchard, Mass. A fluent speaker, and a prolific writer, full of energy and zeal, his glowing descriptions of the beauty of the flower, and practical demonstrations of its adaptability to the New England climate, soon found their way into the most widely circulated journals and magazines in the Yankee States.

As only a paltry 300 miles separate Boston and New York, the leading seed firms in the Empire City were soon close upon the heels of their confrères in the modern Athens, and the contagion soon spread to the city of brotherly love (Philadelphia). Mr. Burpee having satisfied himself that the Sweet Pea was "all right," by submitting it to severe and practical tests on his Fordhook Farm, with characteristic foresight enlisted the practical sympathy and aid of the Rev. W. T. Hutchins, and from this point the success of the Sweet Pea boom was assured.

For a time the principal source of supply was Europe, and particularly England, but as the possibilities of California as a seed-growing center were becoming more widely recognized every day, experiments were made with Sweet Peas, and the result of the culture is known to us all, it having been demonstrated that some of the best Sweet Pea seed in the world could be produced in that glorious climate.

As the cheap Chinese labor was available, and the crop, at prices then ruling, was extremely profitable, the growers quickly lost their heads, and the market was soon glutted with a huge surplus, which, in the main, had not been cultivated with much regard to quality or purity of stock. As the American market was then practically closed to European growers, save for stock seed of the latest novelties, the culture on this side was naturally curtailed, and as the California growers did not care to continue a culture which threatened to become unprofitable, it appeared, for a time, as if there would be a Sweet Pea famine, but this was prevented by the intelligent action of Morse, Rohmert, and the Sunset Company, who resolutely set themselves to remove the existing reproach which rested on the quality of California-grown seed, and, by winning back the confidence of the buyers, obtain a price which would enable them to grow it at a profit.

The unfortunate seasons which European growers have experienced since that time have been all in favor of the Californian grower, who has once again contracted the Sweet Pea fever, and, but for the European failure, would have been heavily overloaded once more. Nearly 1000 acres in different parts of that vast country were devoted to this crop last year, and so abundant has been the harvest that some of the large commission houses have been able to obtain their supplies at less than half the contract prices. This will, it is to be hoped, check the wild speculation referred to, and place the culture on a sound, profitable, and honorable basis.

As regards the culture of the Sweet Pea in America, by the Americans in their own private gardens, I am pleased to be able to report that it is still going strong. The good work done by the N. S. P. S. in this country is being taken up in America, and a National Sweet Pea Society has been established in New York State, which will carry on the good work initiated in London.

Very interesting testimony to the enthusiastic cultivation of the flower will be found in my article on "A Sweet Pea Carnival," which appears in the N. S. P. S. "Annual" for the present year; doubtless similar conditions obtain in many other places. All this goes to prove that in these days, at any rate, the Sweet Pea is not

"A flower born to blush unseen,

And waste its sweetness on the desert air."

S. B. DICKS in *The Gardeners' Magazine*.

Fuchsia Improved Emma Toepfer

This improvement of a popular Fuchsia is the result of years of careful cultivation by Johann Nissle, city gardener of Kaufbeuren, Germany, who describes his process in a recent number of Moeller's Deutsche Gaertner-Zeitung. Using only cuttings of plants with large flowers, and that had been under the highest cultivation, he finally succeeded in producing this very large-flowered variety, which he considers one of the finest of the present day Fuchsias. The sepals are light carmine in color, while the very double corolla is a delicate pink. The plant grows to a height of a little over three feet, and is much more erect in habit than its parent; it is a very free bloomer. It is especially adapted for pot culture, and should become one of the best sellers when more widely known. The originator has also used it for planting in masses, with splendid effect. And he has also trained it into very pretty little standards, that were still blooming in the middle of November. It does not demand more as to culture than any other Fuchsia, rich, somewhat sandy soil, being best adapted to it.

Readers are requested to write us on any subject bearing on trade conditions. If the subject interests them it will, in all probability, interest many others.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. DeLa Mare Ptg. and Pub. Co. Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. DeLa Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the officers is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beckman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9:30 to 12.
Boston: Robert Cameron, Cambridge, Mass.

Philadelphia: A. H. Secker, 306 Wood Building, No. 34 So. 16th St.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Order; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

The Orchid Exhibition at Boston

Rule 9 in the general schedule of the Mass. Hort. Society, which reads: "No prize shall be awarded for any plant or other article unless such plant, or the plant producing such other article, shall have been the property of the exhibitor for three months next preceding the award, except such variety be exhibited for the first time in this country or where special exemption is made from this rule in the schedule," will be suspended for the Orchid Show in May. Thus persons having plants in their possessions for only a short time can exhibit them in competition.

The complete schedule for the Orchid Show in May will be sent out about March 1; those desiring copies should write to Wm. P. Rich, Hort. Hall, Boston.

The Establishment of a Parcel Post

The Boston Gardeners and Florists' Club, at its meeting on Tuesday evening of this week, again came to the front with an unqualified endorsement of the establishment of a Parcel Post in the United States. Here is further proof that the people are awakening to the need of this much to be desired convenience. The Society of American Florists and the Newport Horticultural Society, in our own line, have placed themselves under record in favor of Parcel Post, and we trust that every club and national society throughout the country will do likewise, and do it at once.

We are bound to have Parcel Post one of these days; why not now?

In this connection, here is what a Canadian paper has to say of the opposition to the will of the people manifested by our Congressmen and Senators:

Americans "Bossed."—The people of the United States cannot have a parcel post because the express companies will not hear of it; they cannot have postal savings banks because the private savings banks will not allow it. For a people who are supposed to govern themselves, our neighbors are "bossed" worse than any other nation in the world.—Victoria Colonist.

No Increase in Second-Class Postage Rates

We are advised that the Post Office Appropriation Bill will be reported this week and that there are no provisions therein looking to an increase in second-class mailing rates, although some steps have been taken directed against those publications which pad their circulation.

Not alone our readers, but all those who subscribe for publications, are to be congratulated on the successful outcome of the fight which has been made against the increase in second-class rates as, most undoubtedly, had there been such an increase made, it would have caused a rise all along the line in the subscription price of nearly every publication.

The contention of President Taft and the post office authorities that the second-class rate is a subsidy to publishers is an incorrect view; instead of that, it is a benefit to all subscribers for publications for the reason that publishers have invariably passed this benefit on to their readers in the form of a low subscription price which would have been impossible otherwise.

If The Florists' Exchange had been compelled to pay more than 1c. a pound for mailing it would have had to raise its subscription rate 25 cents for each additional 1c. charged on the pound rate. As it is now we pay practically 20c. a year postage on each subscription we fill.

Government Free Seed Distribution Condemned

At the meeting of the Boston Gardeners and Florists' Club on Tuesday evening of this week, with a representative membership present, the Government Free Seed Distribution was pronounced a humbug which should be done away with.

In this sentiment, and with the distribution as now conducted, we heartily concur. Organizations of florists and nurserymen, both State and National, should take this matter up vigorously and all the craft place itself on record. We have nothing to say against the distribution of rare seeds or plants, which was the intent of the law as originally passed, but when it comes to distributing ordinary garden seeds by the millions of packets, it is surely high time that the voice of the country was heard and effective steps taken toward the terminating of this uncalled for free dispensation of the people's money. Government, as has often been pointed out, might as well undertake the free distribution of shoes and clothing, or any other supplies, and with equal reason.

ILLINOIS STATE FLORISTS' ASSOCIATION

Proceedings of the Fourth Annual Convention
held at Champaign-Urbana, Ill.,
Feb. 15-16, 1910

By Telegraph.

About 200 Illinois florists attended the fourth annual convention of the Illinois State Florists' Association held at Champaign-Urbana, Ill., Tuesday and Wednesday, February 15-16. The delegates were met at the railroad station by the officers of the Association and proceeded at once to the University of Illinois where a group photograph was made on the steps of the new Auditorium. The delegation then passed on to Morrow Hall, in the Agricultural Building, where the first session was held.

Tuesday's Session

The first session of the convention opened on Tuesday afternoon at 2 o'clock in Morrow Hall. Dr. Edmund J. James, president of the University of Illinois, formally opened the meeting with an eloquent address of welcome. The address was ably responded to by Phil. J. Foley of Chicago. The secretary, J. F. Ammann, then made his annual report as follows:

Secretary's Report

Your secretary begs to report a total membership of 175, divided as follows: life members 18, annual members 153, honorary members 4. There has been one death in our ranks during the past year, namely, that of J. B. O'Neill of Chicago, whose early demise we all deplore. We have increased our life membership by seven members. The number of annual members taking out life membership having been greater than the number of new annual members received has decreased our annual membership by two.

The trade papers have, as usual, given us good assistance in our work, and we all feel much indebted to them for it. Much progress has been made in our experimental work which will be reported to you more fully later by Secretary Rudd of the advisory board.

In the matter of data I am sorry to report very slow progress. It seems there are still a great many florists throughout the State in a dormant condition, who need forcing. For instance, out of 400 return postals mailed I received less than 100 answers, so you see the percentage of dormant stock is large. I believe, however, I have sufficient data to make a fairly accurate estimate on the area of glass throughout the State, as soon as the same can be computed, which I regret to say I have so far not found time to do.

The membership of this Society should be larger. I regret to say the officers—especially vice-presidents—do not give this important part of our work the attention it should have. Some means should be devised by which our membership would be materially increased. Present members who are in arrears for dues should be urged to pay up and take more interest. The secretary has tried various means, through correspondence, to accomplish results on these lines, but so far has received little encouragement for his work.

Treasurer Frank L. Washburn made his report covering the finances of the Association which was referred to an auditing committee.

The report of W. N. Rudd, the secretary of the advisory board for the experiment station was then read by that gentleman. The report was as follows:

Report of the Advisory Board for the Experiment Station

Your board begs to report that since the last annual meeting of the Association three meetings of the board have been held, two at Urbana on July 12 and Dec. 27 respectively, and one at Chicago on Feb. 4. The board would state that the work entrusted to them has not suffered by reason of the small number of meetings, but, on the contrary, the business has been thoroughly attended to; while as each meeting causes an expense which

must come out of our fund, money has thereby been saved and added to the amount available for the practical work. At the meeting of July 12 the full board was present, as well as Messrs. Blair, Dornier and Nearing of the station staff. Financial statements showed something over \$200 of the appropriation unexpended on July 1. The report showed, roughly, that about one-half of the appropriation, namely \$7500, or a little more, had been expended for buildings and equipment, and also that nearly an equal amount had been contributed from the general station fund toward the building of the new greenhouses, which had cost a total of about \$14,000.

In this connection it is proper to make known to you the grand support which has been given us by Dean Davenport and Professor Blair. They have shown the greatest interest and enthusiasm in our work, and although it is a well-known fact that their general funds are scanty, placed at our disposal nearly \$7000, which enabled us to complete the greenhouse plant and get to work in a thorough and systematic manner.

Mr. Dornier read a general report of his work for the past year, that is the year 1908-09, with suggestions for the work to be taken up during the coming year. This report was carefully considered, the matter viewed from all points, and it was decided to continue the fertilizing experiments on Carnations, and also, on the completion of the new houses provided for below, to take up a similar line of work with Roses, together with some work on Cucumbers.

It appearing that by economy the amount could be spared, the sum of \$4500 was appropriated to complete one new double greenhouse similar to the one previously built, with an additional boiler, if possible.

At the meeting at Urbana Dec. 27, a financial report was presented showing that the amount expended, together with the amount still unpaid, on the new houses was about \$4651, making the total cost of the plant as you see it today about \$18,650. It was stated that this would leave a deficiency of about \$1140 to carry forward the work to the end of the fiscal year, when the second half of the appropriation would be available, but that this deficiency would be taken care of for us from other funds until our own money was available. The balance of the meeting time was taken up, as usual, by a careful inspection of the houses and the work being done, and an extended discussion of the same.

The meeting of Feb. 4 was held at Chicago, Messrs. Davenport, Blair and Dornier from the University and the full Board being present, as well as many local florists who had been invited to attend the meeting so that explanations of the work being done could be made and as much interest as possible be aroused. A general discussion ensued, and it was the sense of the meeting that the results of the work up to date were satisfying and encouraging, and that the work should be pushed vigorously, not only along the lines heretofore taken up but it should be expanded in every possible direction in so far as the funds available would make it possible.

In closing this report some explanation would seem to be needed. The reason for taking up the study of fertilizers was that it seemed to be the one subject of greatest interest to the florists of the State at large at the present time. The reason for selecting the Carnation for the beginning of the experiments was that in certain ways it was the most available and desirable plant to begin with, and that a good share of the results would be almost equally applicable to other florists' flowers, and with the space available only one variety could be handled in the complete and comprehensive way desired. The reason that no results have been published is that while much of interest has been learned everything must be verified by repeated experiments, as conditions affecting any one series of tests might interfere with the accuracy of the conclusions drawn, and it was strongly put before the board and concurred in unanimously by them that it was much better to let the florists wait for their information than to take any possible chance of giving them information which might, by subsequent test, be found wrong.

In conclusion the board wishes to extend its thanks to Dean Davenport and Professor Blair for the many courtesies shown and to express its confidence in Mr. Dornier, and its great satisfaction with the able way in which he has handled our work, of which he has been directly in charge.

Professor J. C. Blair, chief of the Department of Horticulture, University of Illinois, then made an excellent address on "The Value of the Experimental Station to the Florists and the Duty of the Florists to the Station."

A. M. Augustine of Normal, Ill., a delegate from the Illinois State Horticultural Society, extended an invitation to the Association to combine its meeting next year with that of the Horticultural Society. President Gullett appointed J. C. Vaughan, W. N. Rudd and C. L. Washburn a committee to consider and report upon the advisability of accepting the invitation.

The session closed at 5 p.m. After adjournment, the delegates visited the experiment station and lingered long in the greenhouses and service building, being much interested in all that was to be seen. Professor H. B. Dornier was in charge of the party and was kept busy

imparting information and answering the many questions presented. Darkness shortened the visit, however, to the regret of many. Leaving the station, all repaired to headquarters to prepare for the banquet.

The banquet was held at the Leardsley Hotel, Champaign. Seats were taken at the tables at 8.15 p.m., there being about 120 participants. The tables were beautifully decorated with flowers donated by different florists. Phil. J. Foley was toastmaster and acquitted himself nobly. Toasts were responded to by the following: B. P. Harris, D. N. Davenport, J. M. Ammann, C. E. Gullett, Professor J. C. Blair, W. N. Rudd, Harry Bunsley and J. C. Vanghan. The lady visitors were present on this occasion.

Wednesday's Session

The proceedings opened with an address by Dr. J. W. Garner, professor of political science, University of Illinois, in behalf of the Illinois Outdoor Improvement Association. C. L. Washburn of Chicago read an excellent paper on "The Cut Flower Industry." The paper, which appears elsewhere in this issue, was listened to with marked attention. Professor H. B. Dörner, Associate in Floriculture at the University, delivered an excellent address on "Our Work."

The auditing committee, Albert L. Hey, Adolph Fehr and C. L. Heintz, reported that they had examined the books and found the treasurer's account correct and showing a balance on hand of \$178.53.

The question of establishing a uniform grading of cut flowers was discussed, and C. L. Washburn, H. L. Smith and C. M. Dickinson were appointed a committee to report on the question.

A resolution was presented to amend the by-laws so as to provide for the meeting of the Association annually at Urbana in the fourth week of February. W. N. Rudd moved an amendment to the resolution leaving the date and place of meeting in the hands of the executive committee, such committee to report its decision on or before Jan. 1 of each year. The amendment was adopted.

A resolution was passed directing that an appeal be made to the government of Illinois to appoint a permanent landscape gardener at Urbana. Another resolution passed was one directing an appeal to the Legislature of Illinois to replace the \$19,000 taken from the appropriation for the experimental station last year, when the appropriation was reduced from \$35,000 to \$16,000, and in addition to appropriate \$35,000, making a total appropriation of \$51,000 for this year.

Election of officers resulted as follows: President, C. L. Washburn, Hinsdale, Ill.; vice-president, Charles Loveridge, Peoria, Ill.; secretary, J. F. Ammann, Edwardsville, Ill., (re-elected); treasurer, Frank L. Washburn, Bloomington, Ill., (re-elected).

A vote of thanks was passed to the florists who supplied the decorations for the banquet, and also to George B. Franks, H. B. Dörner and all others who had assisted to make the convention a success.

The Exhibition

The exhibition was held in the new Auditorium of the University, located on the campus, and was most creditable. The judges were Emil Buettner, Park Ridge, Ill., N. Zweifel, North Milwaukee, Wis., and Charles N. Johnson of Morgan Park. The report of the judges, made at Wednesday's session, was as follows:

Seeding Carnations, points awarded: Chicago Carnation Co., Joliet, Ill., Mary Tolman, 85; Conquest 85; Sangamo 85. F. Dörner & Sons Co., Lafayette, Ind., White Wonder 85; Hoosier Lad 88; Scarlet Glow 85; No. 42-06-Light Pink 85. R. Witterstaetter, Cincinnati, President J. A. Valentine, 85; No. 1407-0, 80. Walter W. Coles, Kokomo, Ind., Mrs. Walter Coles, 85. A. C. Brown, Springfield, Ill., Superba, 80; Optimo 76; Clara Mae 65. W. N. Rudd, Morgan Park, Ill., Greenwood 86. N. Zweifel, North Milwaukee, Wis., Bright Spot 86. E. G. Hill Co., Richmond, Ind., Annie May 86; Mrs. Beckwith 81; James Whitcomb Riley 81. A. C. Canfield, Springfield, Ill., Red Nelson Fisher 80. Anton Then, Chicago, No. 291 Scarlet, 74; No. 41 White 83. Bauer & Smith, Indianapolis, Shasta 85.

For Displays of Standard Varieties of Carnations, honorable mention: C. Loveridge, Peoria, Ill.; Bassett & Washburn, Chicago; A. C. Canfield, Springfield, Ill.; Jos Heintz & Sons, Jacksonville, Ill.; Wirth & Gaupp, Springfield, Ill.; A. Washburn & Sons, Bloomington, Ill.; Henry Baer, Peoria, Ill.; Henry Knopf, Richmond, Ind.; Chicago Carnation Co., Joliet, Ill.; Henry Eichholz, Waynesboro, Pa.; Henry Johann & Son, Collinsville, Ill.; W. G. Hill, Streator, Ill.; J. F. Ammann, Edwardsville, Ill.; W. N. Rudd, Morgan Park, Ill.

Roses, special mention: Wendland & Keimel, Elmhurst, Ill.; Killarney and White Killarney; Bassett & Washburn, Chicago; Bridesmaid; Poehlmann Bros. Co. Morton Grove, Ill.; My Maryland and Killarney; V. H. Gullett & Sons, Lincoln, Ill.; White Killarney; J. F. Ammann, Edwardsville, Ill.; Killarney, My Maryland, Mme. Abel Chatenay and Ivory.

Miscellaneous, special mention: J. A. Peterson, Cincinnati—Begonia Glory of Cincinnati; Frank B. Smith's Sons, Danville, Ill.—for collection of flowering plants; August Jurgens, Chicago—for Daffodils.

Treatise on the Sweet Pea will be generally upheld, we believe. Not only that, but he has invested his subject in a charming flow of language which appeals to and attracts the reader from start to finish. It is so seldom the fortune of the seeker after knowledge to be enabled to absorb it so pleasantly that this particular instance should be noted. The author and his subject are in complete harmony; there are no discords, the style is somewhat sentimental, it will be said, but it must be remembered that the Sweet Pea is the subject. Pardon is craved for the poetry which starts each chapter and, in view of all the other excellencies, pardon should be freely accorded where the rhythm may not strike quite true.

The early chapters deal with the beauty and perfume of the Sweet Pea, of its introduction and rise into public favor, of its structure, self-fertilization, cross-fertilization, the laws of Mendel and other matters relating to the raising of the newer varieties, following with well written articles on the best soils and manures, seeds, raising of plants, and a word as to cuttings, as well as the methods of planting and supporting vines, and the most desirable location where Sweet Peas may be grown.

Later chapters deal with the Sweet Pea as an exhibition flower, as a market flower of the culture under glass, of its enemies, and of many different varieties, not omitting the cultivation (in no fewer than six chapters of the subject), in England, Wales, Scotland, Ireland and the United States, all of which should prove very interesting to the Sweet Pea lover.

The McIntyre Bros. Two of Philadelphia's coming wholesale florists

The Sweet Pea Grower's A. B. C., a biography, guide and summary, gives in alphabetical order short biographies of the men who have been chiefly instrumental in developing the Sweet Pea, and a definition of every term, technical or otherwise, having to do with its culture and history.

An appendix furnishes what appears to be a complete catalog of Sweet Peas, giving names of varieties, with particulars as to the raiser, the color, and description of flower, also furnishing a selection of the varieties suitable for the garden and for exhibition; it also names the too-much-alike kinds, the latter according to the rules of the National Sweet Pea Society. A complete index affords a guide to every important item in the book.

The illustrations are numerous and superbly printed, picturing principally the best of the newer varieties, and there are as well numerous engravings of an informative character, covering pot culture, enemies, diseases, trellises, etc.

Copies of Mr. Wright's book may be obtained through the publishers of the EXCHANGE. Price, prepaid, \$1.00.

FUNGUS DISEASES OF PLANTS: with chapters on Physiology, Culture Methods and Technique. By Benjamin Minge Duggar. Ginn & Co., Boston, New York, Chicago, London.

The author is professor of plant physiology in the New York State College of Agriculture, Cornell University, Ithaca, N. Y., and, therefore, well qualified for his subject. Part I, Culture Methods and Technique, prepares the student for the various phases of scientific research in the study of fungous diseases, from the preparatory stages of isolation and pure culture methods, up through germination studies to artificial infection.

Chapter II, which deals with the principles of disease control, will be found of special value to all growers. It describes the application of fungicides and preparation of same, using as a basis for experiments Bordeaux mixture, ammoniacal copper carbonate sulphur, formalin, and

other ingredients, all of which are fully described, as well as uses to which the mixture may be put to be effective in the destruction of diseases.

It is, however, in Part III, Fungous Diseases of Plants, that the florist, the seedsman, the nurseryman, the market gardener and the farmer, the men who encounter these diseases in their every day pursuits, will find the most interest and the greatest benefit. The average man will have to exercise patience in seeking the information desired, but it is here and obtainable. At this point the average investigator will feel that a short cut to the knowledge of hard names would be worth much to him, but there is no more relief from scientific names for diseases, than there is from botanical names for plants, so, perforce, the man-who-seeks, as we have already remarked, can find.

Every known fungous is classified and named, and numerous illustrations render considerable assistance to the unorthodox student in fixing identification, which is again assisted through a "Host Index" of fungous diseases specially described or cited throughout the pages, followed by a "General Index." By the way, the "Host Index" should be first consulted as herein will be found the common every day names of host plants and accompanying diseases.

Florists and nurserymen will be particularly interested in the principles and methods of soil sterilization and the description of the Britton soil steam sterilizer. A study of the book will enable those desirous of so doing to make their own experiments in artificial infection and for a variety of other purposes.

Diseases which have hitherto been difficult to combat, are explained thoroughly, as well as the root rot of Tobacco, Violets, Peas, Lupines, etc. We are also indebted in a large measure, as the book says, to the imperfect fungi, for a large number of plant diseases. This class constitutes a heterogeneous division, and is regarded as a co-ordinate division for the sake of convenience in general treatment and classification. This species of fungi is responsible for Potato scab, bud rot of Carnations, pink rot following Apple scab, mildew of cotton, Rice blast, Peach and Apricot scab, Onion mold, blight of Ginseng, leaf spot of Beets, etc., etc., detailed description of which, together with illustrations showing effects of wilt on the China Aster, Carnation and other plants, makes the work a truly valuable one.

From cover to cover, the contents should hold the unabated interest of all who are interested in the check of plant diseases. Nurserymen, seedsman, market gardeners and florists, as well as fruit growers and landscape gardeners, will find within these pages, descriptions of troubles which have heretofore been recognized as insurmountable and, with a better knowledge of the contents, and the methods of combating fungi of every species, larger and better results will show themselves when a closer understanding is possible between the horticulturist and plant life in its every stage.

The trade in general should show its appreciation of the author of this able work, by purchasing it liberally, as it has entailed an immense amount of labor and study in the compilation of facts and statistics, making it perhaps the most complete work of its kind. So far as our knowledge goes this is not only the latest but the most complete work yet published on Fungous Diseases, and a copy of Prof. Duggar's work should be in the working library of all our readers.

Price \$2.00. Of Ginn & Co., New York, or through the publishers of The Florists' Exchange.

H. Emulsion The advent of the new insecticide Aphine indicates that American growers are being well looked after. In these strenuous times, when insect pests or the lack of them spell loss or profit it behooves everyone to pay attention to the advance of science. No market man can afford to waste time and money in preparing home-made remedies which, frequently, are only partially effective and sometimes dangerous.

On this side of the water we are particularly well catered for, some of the more recent introductions for insect and fungus fighting being strikingly in advance of anything formerly used. Perhaps the most revolutionary wash is a German concoction which rejoices under the simple term, H. emulsion.

Primarily introduced for fruit growers, for the purpose of combating insects and their larvae, it has, after five years' test on the Continent, proved to be a many-purpose fluid. Not only can it be used for Winter spraying against the Winter moth, etc., but it is also deadly to the so-called American blight, which is, at all times, a menace to Apple growers. Further, by varying the strengths of the fluid, it can be used against Mussel Scale and Oyster Shell Back Scale, Red Spider, Apple Sucker, Blossom Weevil, Pear Midge, Black Fly, all vermin, both leaf and soil, that attack vegetables, Canker Mildew, Rust, Scab, both Apple and vine, Leaf Spot, Fern lice, caterpillar, tree lichens and mosses, the ova of various moths, and various fungi, like Peronospora or Cucurbit Spot, while by painting the trunks of trees, rabbits and rats are prevented from injuring the bark.

This remarkable fluid has a very pungent odor, but it leaves no after effects upon fruit. I am using the H. emulsion, both upon fruit trees and various plants, such as Roses and Carnations, and in no instance is injury visible.

Carnations, Past and Present

A paper read before the New York Florists' Club, Feb. 14, 1910, by W. H. Taplin.

So much has been said and written on the subject of Carnations and Carnation culture during the past few years, and has also been expressed so well, that it seems scarcely possible that I may present anything new on this subject for the consideration of such an up-to-date organization as the New York Florists' Club. The literature of the Carnation has become extensive, and there are, doubtless, many repetitions to be already found in it, so possibly a few more will be pardoned at this time.

That the output of Carnations is steadily increasing will, I think, be readily admitted by anyone familiar with the wholesale trade of our city; and that there is no better market for high-grade flowers will also be conceded by the majority; but it is also, doubtless, true that there are still many Carnations sent into market that are far from ideal, either in size or condition, and the oversupply of such flowers breaks the market to such a degree that good stock is frequently sacrificed. It has been said that New York is the dumping ground for the growers of flowers in all the surrounding country at any time when the home markets of said growers become overloaded, and there may be some truth in that assertion; but, at the same time, one cannot blame the growers for hunting for a market, and the commission men would probably not refuse to accept the trifling percentages that come their way from this outside business. However, the New York market is critical in regard to Carnations, as also other stock, and it is more profitable to the grower to supply the varieties and the grade that the market calls for rather than to produce simply an ordinary run of stock.

To look back some thirty-five years and recall the varieties of that time, and then to glance at the Carnations of today, gives room for thoughtful comparison. Astoria, Edwardsii, Peerless, Degraw and La Purité were among the stock from which in later years an improved race sprang. In fact it would seem that Astoria was the original parent of most of the yellow varieties that have since been grown. But from Degraw and Peerless down through the multitude of whites that have followed them, up to White Enchantress and White Perfection, are shown many strides of improvement, and what the next ten years may bring forth we can only guess. Possibly that traditional four-inch flower on a free growing and free blooming plant may be among the good things the hybridizers will surprise us with.

Then there have been the successive steps from Day-break and Grace Wilder, through the various shades of pink, until Peter Fisher brought forth Enchantress, the most popular light pink of today, and in all probability the most widely grown variety in the Carnation world. And from Portia onward, through the various shades of red, there have been many changes. A red of the size of Portia, free blooming though that variety was, would not stand much chance in the market in comparison with Victory and Beacon, and according to the returns from Pittsburgh even these latter fine sorts are not in the same class in regard to size with Hoosier Lad, Dörner's latest triumph. But the majority of scarlet varieties have an unfortunate habit of being favorite hosts to the rust fungus, and Victory is no exception to the rule, in fact it is decidedly the exception to find a bench of this variety that is free from rust. Of course, we all know that rust is not such a handicap to the grower as stem-rot, or spot, but at the same time it does not help the appearance of a Carnation house, nor does it improve the stamina of a variety infected by it. In addition to this, Victory does not branch very freely in the field, and as a natural result the plants are likely to be small at the time of lifting; but with all these drawbacks it is a fine flower and a good keeper, and as such sells readily.

The later red—and I had almost said the favorite red—of the present day is Beacon, also a product of that clever hybridizer, Peter Fisher. It is a great record for one grower to have produced such a noteworthy trio of varieties as Mrs. T. W. Lawson, Enchantress and Beacon, all of which originated with Mr. Fisher, and while the West is undoubtedly coming forward at a good round pace in the production of new Carnations, yet there may be many that "also ran," before such another team as that we have noted is brought forth. The evidence seems to be that Beacon is the most productive red in the market, and although it is not over large, and with many growers is given to splitting badly during Midwinter, yet it is a good Christmas color, and a free growing and thrifty variety, and, in short, with all its faults, we love it still.

We have already mentioned Mrs. Lawson, that for several years was the leader in the dark pink class, and even yet is grown to some extent, this variety having displaced a number of others in various shades of pink. But Mrs. Lawson does not appeal to our market very strongly now, her place in turn having been taken by some later arrivals. Mrs. Lawson has, however, left a numerous family, and among them Welcome, Winsor and Variegated Lawson are still grown to a greater or less extent, and White Lawson may also be occasionally found, though these varieties are usually under the standard for length of stem.

Counting from La Purité, which I believe was introduced from Europe to this country by Dailledouze, Zeller and Co., and was the first pink Carnation with which I had an acquaintance, there have been hosts of pink varieties launched on the sea of trade, and many of them have been wrecked on the rocks of criticism.

But, Mr. President, it is much easier to be a knocker than to produce the goods, and I think we should all give honor to the pioneers in the Carnation trade who offered to the world for a proper consideration, in due course, such pinks as Grace Wilder, Wm. Scott, Albertine and others. The varieties we have noted were not perfect, but neither have those of the present day reached to that lofty standard, and even now there is room for a good dark pink, and there are more than whispers that such are on the way.

Crimson is not a color that is demanded in thousand lots in most markets, the most likely exception to this statement being found in the neighborhood of Harvard, but crimson Carnations have been grown for a good many years when we count from Crimson King, and even now the crimsons that are offered do not approach the size and vigor we find among the white and pink varieties. This fact makes us think that there is still room for improvement among the crimsons, and possibly it may be found among the number of crimson seedlings that are being tried out. In some parts of the country Harry Penn is still producing some good flowers, but in our neighborhood this variety has lost its grip.

Patten and Variegated Lawson are probably the most popular of the variegated varieties, but neither of them can safely be counted upon to pay the rent, the first named being especially slow in blooming in the Fall and early Winter, though producing abundantly in Spring. Bay State secured the gold medal last season, but from the accounts of several growers does not seem to produce much gold in the regular order of business.

Among the fancy varieties of past years Prosperity was the greatest success, and in its time brought the highest price of any, but now we would have to hunt for some time to get a hundred flowers of Prosperity, for very few growers handle it. Toreador is a later variety of similar type to the last named, and though variable in color is a very attractive flower, on an unusually stiff stem.

Of dark pink and cerise there have been many novelties of late years, among them being Aristocrat, Afterglow, Rose Pink Enchantress and Dorothy Gordon, each of which has had, or still has its champions, and each of which is beautiful in its own way, though the first three have all developed some disadvantages; and regarding the last variety most of us will know more in a year from now.

Mrs. C. W. Ward and Alma Ward are both beautiful varieties, and have commanded good prices the past two or three seasons, and being on the market now may be tested by the trade in general.

There still is room for a good yellow variety, for, strive as they may, the hybridizers do not seem to attain their ideal in this line; yellow Carnations, generally speaking, are either lacking in constitution or else they are not free in blooming, or are undersized, with the result that no yellow variety is now grown to even the extent Eldorado was a few years ago.

And now to sum up briefly, it may be said that in the opinion of an ordinary observer, and one that by no means claims to know it all, there is much that is encouraging in the progress that has been made in Carnation varieties and culture during the past few years, for wonderful things have been done by Dörner, Fisher, Ward, Weber and other men of prominence in this department of our profession; and I fully believe that there will be quite as great achievements to chronicle in the next ten years as have been witnessed in the past decade, for with increased knowledge and experience more

Single Bloom Carnation White House

systematic work will be possible in the future than has been accomplished in the past.

Discussion.

At the conclusion of the reading a short discussion ensued. James T. Scott said: "I have been told that the bursting of Carnations is more in evidence this year than ever before. At times Enchantress is seen in this condition to as large an extent as half of a bunch; and Beacon also is bursting. Is it possible it is due to the influence of Halley's Comet? Anyway, I have been asked very much lately why such should be the case, and I can give no lucid answer. Perhaps Mr. Taplin can tell us something about it."

MR. TAPLIN: I do not know that I can reply to the question, it is too wide. I think we all know that Carnations are influenced by the weather. We sometimes have a succession of dull days followed by bright, sunny ones, and flowers which have been held back commence to push up, and frequently throw up the center petals quicker than the calyx develops, and it bursts. The non-bursting Carnation has not yet been produced—at least I have not seen it. A non-bursting Carnation, no doubt, would have few petals in the center, consequently would not act as would Enchantress and varieties having short petals in the center.

JOHN BIRNIE:—I do not think it is right to blame the weather. If we go back to the time of the Degraw and La Purité varieties, and others, can any of us remember that they bursted? I am sure I cannot remember having seen a bursted Degraw. Last year bursting was an epidemic at my establishment, but this year plants grown in the same way and under the same conditions have been particularly free from bursting or bullheads—and we have had much about the same kind of weather. I have had less trouble than I remember to have had before, even with Queen, a variety which has been very apt to burst. I have heard complaints as to White Perfection bursting, but since we started firing we have not been troubled.

The German Dahlia Society

In a letter to Messrs. Wm. F. Turner & Co., New Bedford, Mass., Curt Englehard, secretary of the German Dahlia Society, with address at Leipzig-Eutritzsch, Germany, advises that the new Dahlias sent by the above firm received no official recognition by that society, as it did not ask judgment. Mr. Englehard says further:

"I placed three roots of each sort in this year's trial fields at Leipzig and Frankfurt, but owing to the extremely cold Summer of 1909 they developed flowers rather late in September. As to 'Ruth Forbes,' this is a really first-class novelty. I showed a fine vase at the Dahlia show at Hanover and everybody admired the pretty flowers. The form of the flower is just fit for our taste, the lovely lilac rosy color with a light hue of blue in the daylight, under artificial light the effect is indescribable. Very long and wirelike stems carry the flower well above the foliage and I am quite sure that 'Ruth Forbes' will soon be praised by every Dahlia friend; it is the first useful Cactus-Dahlia received from America, and raiser and introducer can be proud."

American Rose Society Exhibition, March 16-18

The Horticultural Society of New York, under whose auspices the American Rose Society exhibits in the city of New York, has taken upon itself the duty of eliciting the interest of as many of its members as possible to develop the best attendance and support for the occasion.

The New York Florists' Club has appointed a special committee to extend courtesies to all members of the Rose Society. The intent is to show in the great hall of the American Museum of Natural History on 77th st. a popular exhibit, without cost to the public—a show of the first magnitude. The hall is at present being repainted and decorated. The measurement is 150 ft. in length and 75 ft. in width. The effort is to obtain, among other things, a fine exhibit of potted plants. Many a dweller in the metropolis can grow a plant in a pot and would enjoy doing so, and an exhibit of that kind is likely to foster a demand for that class of Roses.

The full list is being revised by the chairman of the schedule committee, ex-President Robert Simpson, and as soon as completed will be put in permanent form, in conjunction with the premium list and schedule of the Horticultural Society of New York.

Since the last report the following special prizes have been offered: John I. Raynor, \$25; Henshaw & Fenrich, \$25; Horace E. Froment, \$25; William S. Allen, \$25; Tremendy & Schenck, \$25; Alex. J. Gutman, \$25; Walter P. Sheridan, \$15; A. H. Langjahr, \$10, all of New York City; King Construction Co., Buffalo, N. Y., \$25; J. A. Badlong Son & Co., Auburn, R. I., \$25; John N. May, Summit, N. J., \$25; Frank R. Pierson, Tarrytown, N. Y., \$25; Wm. C. Badgley, Chatham, N. J., \$15; L. B. Coddington, Murray Hill, N. J., \$10; ex-pres. Robert Simpson, Clifton, N. J., \$30; Society of American Florists, Medals.

Mr. James Wood, president of the Horticultural Society of New York, will deliver an address upon "Ideals of Horticulture"; Mr. Geo. V. Nash one on "The Rose and its History," an illustrated lecture with colored lantern slides; and Mr. Adolph Farenwald of Roslyn, Pa., on "Roses, the brightest of flowers."

A valuable paper is being prepared by W. S. Sibson, upon the "Northern Pacific Coast Roses."

Joseph A. Maund has been appointed superintendent of exhibits.

BENJAMIN HAMMOND, Sec.

Conjointly with the exhibition of the American Rose Society will be held an exhibition by the Horticultural Society of New York, which Society offers the following premiums:

Flowering Plants—Miscellaneous

Acacia pubescens. For the best specimen.....	1st	2nd
Acacia paradoxa. For the best specimen.....	5	3
Acacia indica. For the best 6 specimens distinct varieties.....	15	10
For the best 3 specimens, distinct vars.....	10	5
Pink, for the best specimen.....	5	3
White, for the best specimen.....	5	3
Any other color, for the best specimen.....	5	3
Anthurium. For the best specimen.....	5	3
Cineraria hybrida. For the best 6 plants.....	10	5
Cineraria stellata. For the best 6 plants.....	6	4
Cyclamen. For the best 20 plants. (Special prize offered by Messrs. R. & J. Farquhar.).....	Silver cup	
For the best specimen plant.....	5	3
Erica. For the best 3 plants, in 3 varieties.....	6	4
Genista. For the best specimen.....	5	3
Rhododendrons. For the best 6 plants, in not less than 3 varieties.....	10	5
Lilacs. For the best 6 plants, not less than 3 varieties.....	10	5
Schizanthus. Best 6 plants.....	6	4
Hydrangea. For the best specimen.....	5	3
Hydrangea. For the best 3 specimens, in 3 vars.....	10	5
Bulbs. Best collection, arranged for effect, other foliage plants admissible, covering 50 sq. ft.....	Silver medal	

Orchids

Under the Direction of the Orchid Section

For the best display.....	25	15
Cattleya Trianae. For the best specimen.....	5	3
Schroederi. For the best specimen.....	5	3
Any other variety. For best specimen.....	5	3
Cypripedium. For the best display.....	15	10
Coleogyne cristata. For the best specimen.....	5	3
Dendrobium nobile. For the best specimen.....	5	3
Wardianum. For the best specimen.....	5	3

Palms and Other Foliage Plants

Chrysalidocarpus (Areca) lutescens. For the best specimen.....	10	5
Cocos australis, or its varieties. For the best specimen.....	10	5
Howea (Kentia) Belmoreana. For the best specimen.....	10	5
Howea (Kentia) Forsteriana. For the best specimen.....	10	5
Rhapis flabelliformis. For the best specimen.....	10	5
Phoenix rostrata. For the best specimen.....	10	5
Canariensis. For the best specimen.....	10	5
Livistona Chinensis (Latania borbonica). For the best specimen.....	10	5
Any other Palm. For the best specimen.....	10	5
Cycas circinalis. For the best specimen.....	10	5
Bay Tree. For the best and largest display.....	25	15
Ficus pandurata. For the best 3 specimen plants.....	10	5
Davallia. For the best specimen.....	10	5
Nephrolepis Bostoniensis. For the finest and largest specimen.....	6	4
ellegantissima. For the finest and largest specimen.....	3	2
Scottii. For the finest and largest specimen.....	3	2

Nephrolepis Piersoni. For the finest and largest specimen.....	6	4
Nephrolepis. Any other variety.....	3	2
Cibotium Schiedei. For the finest and best specimen.....	10	6

Stove and greenhouse foliage plants. For the best display, not less than 25 plants.....	Silver medal	

A copy of the schedule and entry blanks will be gladly sent, upon application by the secretary, George V. Nash, New York Botanical Garden, Bronx Park, New York City.

The American Rose Society

The American Rose Society will soon have its annual meeting and it is to be hoped that every member who can will attend, and if possible exhibit something; and that an effort will be made to obtain a larger membership, both active and associate. It does seem that the small grower would be glad to join the ranks with his larger brothers, and that the benefit would be mutual goes without saying. It seems also that the advantages of associate membership should be extended to all assistants, on both private and commercial places. The larger the membership, the greater the power for good, and the more far reaching will be the influence and prestige of this Society. "A Rose for every home; a bush for every garden" is an excellent motto, but it is a long way from being fulfilled. I think that if there was a bush in every garden there would be many more buyers of cut Roses today than there are, for the interest in Roses and love of the flowers, and the desire to have them constantly around the house, would be greatly increased.

It must surely be true that to further popularize the Rose good stock should always be offered, whether it be cut flowers or plants, and when the latter are sold good advice on varieties and planting is often of great benefit to the customer. The amateur is often easily discouraged by failure. A few shining examples of success in a neighborhood will encourage others greatly, and it is remarkable how well Roses will grow outdoors with so little care as we see them getting occasionally; and that they are well adapted for bedding no one who has seen them will doubt. One of the finest heds I saw anywhere last Summer was one of the Baby Rambler; after the first cost it is good for years. I have been interested lately in watching the craze for artificial flowers. It seems to me that this is a thing that will be short lived, for to wear artificial flowers must be a brand of a cheap person. However, the different societies as bodies and florists as individuals ought to do all in their power to discourage the practice.—EGER HOLMES.

Spring Show of the Massachusetts Hort. Society

Notice Change of Dates of Exhibition.

By direction of the Committee on Prizes and Exhibitions the February Flower Show will be held at Horticultural Hall, Boston, on Friday, Saturday, and Sunday, February 25, 26, and 27, and not as announced in the Preliminary Schedule.

This exhibition will take the place of the usual Spring show and it is expected to equal it in extent and interest.

WILLIAM P. RICH, Secretary.

The Cut Flower Industry

A paper read by C. L. Washburn of Chicago, before the Illinois State Florists' Association, Urbana, Ill., February 16, 1910.

The cut flower industry of the State of Illinois has made most remarkable progress in recent years. To fully obtain an idea of this industry we must look back some eighteen or twenty years and compare the business then with that of the present time. The business then was not considered of any importance by the other commercial lines of trade, but of late years it has been recognized as one of the standard industries of the State. The quality of flowers twenty years ago would not compare with the quality handled at the present time. The stems of the best grade of Roses then were only 12 to 15 in. long, and American Beauty had stems only 30 to 36 in. long. Carnations were about the size of a quarter-dollar, but as the demand kept calling for a better grade of flowers the growers kept improving the quality of their product. Prices also averaged better as the quality improved. The flower buyers all through the country began to see that the better quality of flowers lasted longer as well as looked better, and they would prefer paying a fair price for good flowers rather than buy the smaller stock at less figures. These facts compelled the growers to raise improved varieties of plants and also to use better facilities and better houses in which to grow their stock.

The evolution in the cut flower industry is one continual effort towards better flowers, and better methods of growing and shipping the stock. There are peculiar features of our line of trade, for in the competitive strife of business we are continually on the look-out for new ideas, new varieties of plants, new methods of construction and new everything else pertaining to our business which can in any way improve our output. The experiment station here at this college should prove of immense value to the florist trade of this State, as a large number of new things can be tested out before being offered to the trade. In fact, it would be a good idea if the trade would insist on a trial test of some of these

new things before being offered for sale, and a certificate from this station showing the results that were obtained from such a trial would be of immense value toward determining the quality of the goods offered for sale.

The growing end of the cut flower business has to keep up to date in everything regarding new varieties of plants, better methods of ventilation and the most improved fertilizers, fumigating compounds, etc. The houses themselves must also be kept up to date. The question of which is the best greenhouse is a hard one. It is generally acknowledged that a separate house is considered best for Roses, while for Carnations and other plants a number of connected houses seem to do as well as separate houses, and they cost less money to build and operate. A separate house should be at least 25 or 28 feet wide, if not wider, and 5 to 8 feet to the gutters. This will give a large body of air and gives more even temperature. Such a house, if built of all iron frame construction, would cost complete, including its share of the heating and other apparatus, about fifty cents per square foot of glass, while a wooden house costs from 25 to 35 cents per square foot of glass. The cost of running a greenhouse depends largely on the quantity of glass handled, but for the average place the fuel cost can be estimated at 3 to 4 cents and the labor at 8 to 10 cents per square foot of glass. The supplies and repairs cannot be very well estimated as they depend on the quality of the house, etc.

In the cut flower industry there is a continual struggle for improvement, at all times, and I do not know of any industry in which a man stands a better show for success if starting in new. One must have experience, of course, in the growing of the stock, but there is as good, if not a better chance for individual effort in our line of trade than in any other. There never can be any monopoly or trust that would control the output or sale of the flowers, for that output is raised in a thousand different places. Every man stands on an equal footing as far as the market demand is concerned, as there is no combination to help or restrain trade to any firm or set of firms. The selling of the greenhouse product, whether cut flowers or plants, is just as important a branch of the business as the growing end. No matter how good the stock is, or how carefully the greenhouses are run, all would be wasted if the product is not well sold.

There are two methods of selling. One, where the growers sell their own stock, having their own grades and methods of sorting and, of course, know just when the stock was cut. A grower who sells his own stock usually caters to some special class of buyers, as the shipping trade for instance. This trade requires flowers cut tighter in the bud, and careful sorting and packing, in order to ship to arrive in good condition. Flowers can be shipped a distance requiring them to lay packed in the boxes forty-eight to sixty hours. These very long distance shipments demand the utmost care, especially as to the weather conditions. During the warm and wet weather it is very hard to have Carnations arrive in good condition when shipped a long distance. Roses, especially American Beauty, will ship in better shape during such weather. The grower who sells his own stock should take pride in having an even run of flowers in each grade.

The other method of selling consists in shipping flowers to a commission firm, to be sold for the account of the shipper. There are a number of such firms in the larger cities that make this selling on commission a specialty. Their usual charge for such work is fifteen per cent. of the gross sales. It is worth this amount to handle the stock right. The expenses of selling are almost this amount with the larger commercial growers.

The cut flower trade is very favorably located as far as Illinois is concerned. Our shipping facilities are unsurpassed. We supply flowers to an immense territory, going east as far as Buffalo, Pittsburgh and Washington, south to the Gulf of Mexico, west to Colorado, Montana and the Dakotas, and north as far as Winnipeg. This running scope of country drains to Illinois a continual flow of money from our sales. The cut flower industry is not a jobbing trade where the most of the money received for its goods goes off to another State in payment for them, but is what might be called a manufacturing enterprise. The grower takes a piece of ground and covers it with glass. He is what might be called an intensified farmer, as from the space under his glass he irrigates his plants by watering them, he ventilates them, he controls the temperature in cold weather by artificial heat, and sometimes raises two or three crops a year from the same bench space. This product is the result of steady labor for 365 days in the year. There is no let up, but one thing crowds on to another, almost, so that there is always something to be done.

A greenhouse is a very beneficial industry to any town. The outlay for labor and supplies is just so much cash that is brought right there to be spent, and when the total amount of glass is considered—in the State of Illinois estimated at about 18,000,000 ft.—the magnitude of the trade can be appreciated. There is a total business in cut flowers and plants grown in this State of at least \$5,000,000 per year. A good share of this immense sum is drawn here from other States and all of this sum is expended right here in this State. It will thus be seen that the cut flower industry is one of the most solid foundation stones on which the prosperity of the State of Illinois is built.

Boston Gardeners and Florists' Club

The regular monthly meeting of the Club was held at Horticultural Hall on Tuesday evening, Feb. 15. The meeting was a great success in every way; the attendance was good, about 250 members being present. The extent and quality of the exhibits on the tables were especially good.

Carnation Night is always one of the most enthusiastic meetings of the year and last night's meeting probably beat all previous records.

Fourteen new members were proposed and accepted. There was quite a lot of business transacted. Resolutions were passed condemning the Governmental free seed distribution and endorsing a parcel post system. There was quite a lively discussion before the resolutions were passed and it was the sentiment of the entire Club that the distribution of free seeds by the Government was nothing more nor less than a genuine humbug. There was some great oratory and Fred Palmer of Brookline spoke eloquently and interestingly on the subject; in fact it was Mr. Palmer who brought in the resolutions that were adopted.

Mr. E. H. Wilson, plant collector for the Arnold Arboretum, Jamaica Plain, whose name was proposed for honorary membership at the last meeting, was elected an honorary member.

The name of Mrs. E. M. Gill, florist, of Medford, was proposed for honorary membership. Mrs. Gill was present at the meeting and she is intensely interested in all matters pertaining to horticulture and floriculture. She is the oldest member in our Club and will be eighty years of age June 28 next. She has been an annual member of the Mass. Hort. Society for forty-five years (since the year 1865), and almost at every exhibition of the Society she sets up with her own hands meritorious exhibits. Even at the last Fall exhibition she competed for dinner table decorations with such competent men as MacMulkin and other well-known florists, and won second prize; indeed, many thought she should have had first prize.

Resolutions were read and adopted, approving of the original scheme as planned by the late Mr. Olmsted and Prof. Sargent, calling for two rows of trees on Commonwealth ave., Boston and condemning the planting of the avenue with four rows of trees, as has been ordered to be done this Spring. There was quite a heated discussion of this subject and it was the sentiment of the entire Club that two rows of trees were preferable to four rows in the small space of ground.

Mr. John W. Duncan, president of the Club, in a few felicitous sentences introduced the able lecturer of the evening, Mr. S. J. Goddard of Framingham, who read an excellent paper on Carnation Growing. The paper was well received and a lively discussion followed its reading, which brought out many practical and useful points not touched upon in the paper. Those who principally took part in the discussion were Peter Fisher, M. A. Patten, H. A. Stephens, James Wheeler, Albert Roper, D. Finlayson, George Buxton and Frederick Palmer.

A rising vote of thanks was accorded Mr. Goddard for his paper.

The exhibits on the tables of Carnations were simply splendid and seldom, if ever, were better flowers staged in Boston. Especially worthy of mention were those from Cottage Gardens, S. J. Goddard, Peter Fisher and Patten & Co.

The awards were as follows:

Two Pots Azaleas and vase double White Azaleas from Leuthy, vote of thanks.

Vase Carnation Sarah Nicholson and vase Shasta, from Patten & Co., vote of thanks.

Vases Hattie Starrett and May Day from Patten & Co., report of merit.

Vases William Penn and Seedling No. 1000, from A. Roper, vote of thanks; and vase Seedling No. 1019, from A. Roper, report of merit.

Vase Winona, from Patten & Co., vote of thanks.

Vase Granite State, from George E. Buxton, honorable mention.

Vase Mrs. C. W. Ward, Cottage Gardens Co., report of merit; and vase Alma Ward, Cottage Gardens Co., report of superior merit.

Vase Enchantress from Littlefield & Wyman, cultural report of merit.

Vase Seedling, Boston Market×Genevieve Lord, from Robert Main, report of merit.

Two vases Seedling, vote of thanks; vases Bon Ami, vote of thanks, and Pink Beauty, honorable mention, from Geo. E. Buxton.

Vase May Day, from Peter Fisher, report of superior merit.

Vases Lawson and Winsor, from Littlefield & Wyman, vote of thanks.

Vase mixed Carnations, cultural report of merit; vase Pink Delight, report of merit; and vase Yellow Marguerite, vote of thanks, from S. J. Goddard.

Vase Rose Killarney, dark variety, from Montrose Greenhouses, report of merit.

Vase Rose Pink Richmond, from Montrose Greenhouses, vote of thanks.

The judges were J. F. Flood, chairman, A. G. Goddard, Geo. Shields, William C. Rust and William Sim.

After refreshments the session closed at 11 p.m. Every one was more than pleased and enjoyed the instructive meeting.

R. C.

Carnation Culture

Paper read by S. J. Goddard of Framingham, Mass., before the Gardeners and Florists' Club of Boston, Feb. 15, 1910.

The subject I have been requested to speak on before The Gardeners and Florists' Club of Boston has been presented to you many times, in all its phases, by the best growers in New England, and this means without dispute the best in the whole country.

Your energetic secretary, Mr. Wm. Craig, has greatly honored me by selecting "Yours truly" (after a request, and a positive refusal to take no for an answer), to say a few words on the Carnation, if for only ten short minutes. I will not speak long enough to bore you on the subject, as I can assure you it is not in my line to speak in public.

To be successful in growing Carnations the minutest details must be carefully considered. To start with, the propagating bench must be absolutely clean, no old rotten bottom or sideboards should be allowed to remain when starting to propagate in the early Winter. My method is to build a bench of one-inch stock, pecky Cypress. We lay the boards close together, using sides three and one-half inches deep. Before filling with sand, whitewash the bench thoroughly, using hot lime with a small proportion of Portland cement to the consistency of very soft mortar, so that it has to be rubbed well with a brush in order to fill every crack.

In picking off cuttings great care should be exercised in selecting from only the healthy plants, and do not take them unless they have fully matured (by being matured, I mean, take them from stems on which the bud is showing color, or is fairly well developed). In setting in the sand be very careful not to set them too deep, about $\frac{3}{4}$ inch is plenty deep enough, make them as firm as possible, and water each row as soon as pressed in. This method gives one a better chance to see that the sand is thoroughly soaked and leveled, so that there are no dry spaces around the base of the cutting. Water should be given every day for ten days. The sand will then keep wet enough to carry the cuttings for the balance of their sojourn in the propagating house.

The next proceeding is to shift the rooted cuttings from sand to flats or pots. We prefer flats as being easier to handle, taking up less room and much easier to care for later in the season with regards to watering. My experience has been, when lifting field-grown plants, that stock planted from pots will retain the shape of the pots and the loose roots around the outside will break off to a very great extent; this is not the case with stock planted from flats. We use flats 12" wide by 24" long by 3" deep; these will hold 60 plants, 10 rows, 6 in each row. That is for the earliest boxed stock. Later in the season, say, any boxed after March 1, 11 rows, 7 in a row, or 77 plants. We prepare our boxes by making the soil moderately firm and the right moisture to work good, one part well rotted cow manure and four parts fresh loam. We always immerse the roots of our cuttings in a pail of water when lifting to remove the sand, finding by this procedure that less roots are broken in course of handling.

Always give a good soaking after transplanting. Put the young transplanted stock in a house that is kept to a temperature of not over 52°, nor less than 48° nights, shielding them from the bright sunshine for three or four days, and keeping them from drafts as much as possible.

Do not top or pinch back until the cutting has grown enough to show the joints. I notice that when a top is pulled from one not developed, as I state, one does not get the heart out clean, and the process has to be repeated sometime later. Consequently the cutting that was jointed has commenced to branch and the other is two weeks behind. Repeat this operation every week, taking tops from the ones most advanced.

Never try to save the tops to increase your stock, even if it is a new variety, and costs you \$12 a hundred; the temptation is great but the profits will be less the next Winter. Also, this may cause you to say the variety is N. G., and to heap abuse on the disseminator.

Keep the young plants growing continually; never let up in your attention. Water, top and feed. Don't hurry to put them in a coldframe until the weather is warm enough to have the sash off in the day time. I prefer a cold frame to a hot bed. Now for the Spring rush to plant outside, we are all anxious to get the Carnation in the field. Here in Massachusetts we commence about April 25 or May 1, if the weather is favorable. Of course, the land must be dry enough and properly ploughed and smoothed.

Our system is the following: Set the line across the piece to be planted. Take a Planet Jr. wheel hoe, with the small plough attachment, and make a small furrow right across. This is just as good as chopping with a spade and ten times as rapid. Have a boy drop the plants (which have previously been cut out) 6 inches apart. After planting, rake or smooth off a couple of feet next to the row and repeat the operation, setting line this time 15 inches from starting point. This will give ample room to run wheel hoe through for weeding and cultivating.

Never let the weeds get ahead of you. Keep the wheel hoe going once a week and handweed every two weeks. We never use a handhoe, too many plants are injured by carelessness on the part of the operator. I find we can do the work faster and much better by getting down on our knees weeding, leaving the weeds on the right hand side of the row. This will accumulate all weeds in every other row, where they can be more readily taken off with a fork if the weather is unfavorable for killing them.

Now the most important part to be considered is in regard to topping or pinching back. Here is where your foundation is laid for next Winter's succession of blooms. Never pinch back every shoot at one time. Go over the plants at least once a week and remove the longest shoots, pinching them back hard to secure good strong growths. We never use a knife. I believe that one can regulate the crop right through the Winter by this style of topping, at least until Spring, when Carnations will crop anyway.

We commence planting inside early in July and plan to finish the first week in August.

Do not have too many plants dug at a time, so that the roots dry up and the plants wilt. Get them in place as soon as possible and put a support around them at once. We plant a small section and then put an Excelsior support around them before watering. This holds the plant for all time and, when watering or syringing through the Summer, holds them upright and in place. This support is cheap, about \$7 per 1000, and with care will last five or six years.

We find that later in the season we have gained considerably by staking at planting time. The plants are upright; new growth will be straight, and, if the second support is not put on as soon as we would like it, the plants are not lopping all over the bench.

Don't shade the glass, except to keep the sun from taking all the moisture out of your own and the help's carcass.

A little mud will do this trick or, much better and cleaner still, is whitening and water put on by a force pump; this will come off through the wind or rain and does no harm to the paint or putty.

I do not believe in shading the newly planted stock. Keep plenty of moisture around the plants and under the benches for the first week, and your plants will take hold better than if you shaded. Your growth will be firmer and will not have that wilted appearance when the light strikes them.

Now comes the time when the best of one's knowledge and intelligence must be brought out. Don't water too much! Don't allow the soil to get too dry! Don't allow the house to get stuffy! Don't allow the strong wind to strike the plants! So many Don'ts, but there are just as many Do's, possibly more. Go over every bench, all around every bench, dig in the soil carefully, study its condition, and that of the plants. Water where needed and no more. Do this twice a day on bright days in hot weather. Lots of bother, but one will have been well repaid for bothering before the holidays are passed.

No such word as failure, if these little Don'ts and Do's are carried out carefully. They are the minutest details I started with in my paper and you have, on them, laid the foundation for your future profits.

Parcel Post

One of the leading agricultural papers of the country, the Rural New Yorker, a fearless and outspoken advocate for the rights of the people, recommends that on March 12 its readers each spend six cents postage for their country, asking that every individual subscriber write three letters: "One to their representative in Congress and one to each of their Senators. Tell these gentlemen plainly and respectfully that you ask them to work for a parcel post. Do not be in the least afraid of them, but do not try to bluff or bluster, yet give them to understand that you mean business. If we can all write together on this day there are enough of us to make an impression. Will you spend six cents for your country?"

We ask our readers to do the same and trust the movement may become national.

The method above indicated is the only one that will carry influence. A million polite but forcible letters, calling for the immediate establishment of a parcel post, the next greatest convenience for mankind to the telephone, will have an effect on legislators who are today quite indifferent to the wants of the people. Parcel Post is bound to come, but why wait an indefinite number of years when combined action on the part of those interested will bring it about NOW.

CYPRIPEDIUM MRS. F. SANDER.—This *Cypripedium*, raised by Messrs. Sander & Sons, St. Albans, England, between their C. Eve and C. insigne Sanderae, was awarded a first-class certificate at the Royal Horticultural Society's meeting on December 21, 1909. The albino element is strong in the seedling, which is said to be one of the finest hybrids of its class. The dorsal sepals are pure white, with a small emerald-green base; the petals and lip pale greenish-primrose-yellow, slightly tinged and marked on the petals with pale purple.

The wide-awake florist is he who reaches his customers through the trade advertising mediums, catalogs, cards, books, window dressing, railroad display signs, street car signs; all are evidences of the progressive man.

February 19, 1910

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres ALBANY, N. Y.
11 North Pearl Street

Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Atlanta Floral Co. ATLANTA, GEORGIA
41 Peachtree Street

We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin BOSTON, MASS.
124 Tremont Street

We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons BOSTON, MASS.
Corporation 24 Tremont Street

Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Robt. S. Wilson BROOKLYN, N. Y.
Fullon St. and Greene Ave

Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality
BUFFALO, N. Y.
W. J. PALMER & SON, 304 Main St.

Hauswirth CHICAGO, ILL.
The Auditorium Florist, 232 Michigan Ave.

The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

JULIUS BAER,
CINCINNATI, O.
Fourth St.

Frank F. Crump COLORADO SPRINGS, COLO.
Retail Florist

Telegraphic orders will be carefully and promptly filled; personal attention given. Usual discounts allowed.

H. N. Champion & Co. CONNECTICUT
New Haven

1026 Chapel St., Opposite Yale College

Every facility for prompt deliveries in all parts of Connecticut. Cut Flower and Funeral work solicited.

W. S. Matthews DAYTON, OHIO
Florist, 16 West Third Street

Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

The Park Floral Co. DENVER, COLORADO
1706 Broadway

J. A. VALENTINE, Pres. Orders by wire or mail carefully filled; usual discounts allowed. COLORADO, UTAH, WESTERN NEBRASKA and WYOMING points reached by express.

Preventing Freezing of Show Windows

The following preventive for the freezing of show windows is quoted by the Handelsmerker from a "Well-known technical journal": dissolve 55 grams (57 grains equals 2 oz.) of glycerine in 1 liter (1 1/4 pints) of 65% spirits (alcohol), adding some oil of amber to modify the strong odor, and let this mixture stand until it has become clear as water when it is ready for use. Then apply with a soft piece of leather or cloth to the inside surface of the glass to be protected.

Sweet Peas for Table and Other Decorations

Few flowers lend themselves so readily to the decorator's art as does the fragrant Sweet Pea. They require no wiring or stiffening of the stem—once they are cut they are ready for the deft fingers to create charming effects for any purpose.

Pretty effects may be had by associating two colors that harmonize, though perhaps nothing is daintier than a table decorated with one variety only—say, the beautiful Countess Spencer. A lovely combination may be obtained by using Henry Eckford and Mrs. Collier, or a crimson and a yellow. Lavender and blue Sweet Peas look dull under artificial light though very pleasing at other times. Or, again various shades of pink, from light to dark, form a nice harmony of color tints.

In arranging the flowers let all be as light and airy looking as possible; never jam the sprays closely together; strive to let every flower be seen. Allow a few flowers to stand well above the others, which tends to give all a natural appearance. A few sprays of colored Lycopodium allowed to trail over the sides of the receptacles and arranged on the table, or sprays of Asparagus, Smilax or other light greenery, all help the general effect, while light grasses and a little of their own foliage inserted among the flowers will lend grace and elegance to the arrangement—if not overdone.—From Sweet Peas 'Up to Date.

Romance of the General Jacqueminot Rose

Mr. Lonsdale's reference to the doubt as to the parentage of the Jacqueminot Rose recalls the fact that it has a legend. Mr. Lonsdale has doubtless heard it. The legend runs that General Jacqueminot had a daughter who was wont to secretly meet a young neighbor, with whose people he was at enmity. The meetings used to take place in the garden and, one day the General discovered the lovers. Drawing his sword, he attacked the young man, whose swordsmanship was unequal to his antagonist's and, in a few moments, he was run through the heart. The girl collapsed in a swoon, from which she never recovered. Close by the spot grew a pink Rose, and the blood of the young man flowed at its roots. Later, the remorse-stricken father ordered the Rose to be cut away but, despite this, a new plant sprang up and blossomed forth the Roses that we know as "Jacks."

For "Supply" Advertisements see pages 312, 313

Sievers Floral Company 70 Geary Street
SAN FRANCISCO, CAL.

"Cheapest of Flowers Always on Hand."

John Brattmeyer's Sons DETROIT, MICH.
Broadway and Gratiot Ave.

We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

Bertermann Bros. Co. INDIANAPOLIS, IND.
241 Massachusetts Ave.

Prompt and efficient service rendered points in Illinois, Ohio and Indiana. Bertermann's flowers excel.

Jacksonville Floral Co. JACKSONVILLE, FLA.
20 Laura St.

We cover all Florida—St. Augustine, Palm Beach, Miami, Tampa, etc.; also lower Georgia. Choice seasonable flowers always on hand.

Samuel Murray KANSAS CITY, MO.
1017 Broadway

I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers on hand. Wire me your orders.

Jacob Schultz LOUISVILLE, KY.
644 Fourth Avenue

Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of flowers always in stock; delivery facilities perfect.

Hall & Robinson MONTREAL, CANADA
855 St. Catherine St., West

We can fill all orders for cut flowers, designs, etc., and can ship to any city as far as Halifax to the East and Windsor, Ont., in the West.

Young & Nugent NEW YORK
42 West 28th Street

We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

J. B. Keller Sons ROCHESTER, N. Y.
25 Clinton Avenue, North

We can deliver flowers at any time, promptly, in Rochester, and surrounding territory. A first-class line of seasonable flowers always on hand.

Clark Florist SCRANTON, PA.
122 and 124 Washington Ave

Telephone or telegraphic orders for any city or town in Northeastern Pennsylvania will receive prompt execution. Usual discount. Phone No. 2454, on either Bell or Consolidated phones.

Holm & Olson ST. PAUL, MINN.
20-22-24 West Fifth Street

We fill orders for any place in the TWIN CITIES and for all points in the NORTHWEST. THE LARGEST STORE IN AMERICA; the largest stock, the greatest variety. Write wire, or phone. We are alive night and day.

Elberon (N. J.) Hort. Society

This Society held a meeting February 10, President Peter Murray in the chair. There were present three directors of the Monmouth County Fair Association, E. A. Slote for the plant and flower section, A. Richdale for the fruit and J. W. Thompson for the vegetable section. E. A. Slote asked the members of the Society to cooperate with the Fair Association and make a good show in the horticultural department. The awards in the points competition were as follows. Wm. Seymour for Calas, 98; A. Bauer for Carnations, 35; P. Ewen for Sweet Peas, 80; C.

Duncan for Azaleas, 75. James Dowlen was awarded a preliminary certificate of merit for a variegated seedling Carnation, and a certificate of culture for a vase of Anthuriums; he also staged a fine collection of greenhouse Roses. ALEX. FLEMING, Rec. Sec.

Nassau County (N. Y.) Hort. Soc.

A regular meeting was held in Pembroke Hall, Glen Cove, on Wednesday, February 9, with over forty members present, and President Duthie in the chair. Six applications for membership were received and C. H. Hyde of Roslyn was elected an honorary member. The schedule for our Summer show was approved, date and place to be decided later. The Dahlia show will be held September 28, and a schedule for same was accepted. The Stump & Walter Co. offered a silver cup for our Fall show and at our last dinner Mr. Geo. Burnett offered \$25 as prizes for same.

Our next meeting will be Rose Day, and three prizes are offered for the best 12 pink, 12 white and 12 any color, respectively. Vice-president Reidenbach also offered \$5 for the best two vases of Sweet Peas, first \$3, second \$2. The essay of George Wilson of Roslyn, on "Carnations," was a treat for all; it certainly deserved a first place among writings on the same subject. Messrs. MacKenzie, Marshall and Johnston acted as judges, and their decisions were as follow: Carnations: Best 12 white, V. Cleres; best 12 pink, A. Robert; best 12 mixed, V. Cleres, with Imperial, Winsor and Enchantress. Cultural certificates were awarded to the following members: W. Eccles for a vase of Winsor, also for a vase of Mrs. Chas. Knopf; Henry Cant, for a vase of Sweet Peas; E. Reidenbach, for two beautiful Cyclamens; A. Robertson, for a vase of Enchantress. Honorable mention was awarded to Fr. Petrosia for a plant of Primula Kewensis, and to E. Reidenbach for a vase of Freesias. At the next meeting Mr. Johnston will give us an account of his travels around the sea during his last vacation.

ADDOR.

Lenox (Mass.) Horticultural Society

One of the most interesting and instructive meetings held by this Society for some time was presided over by President G. Foulsham on Saturday, February 5, and was largely attended. W. Maynard was elected an active member of the Society. An exhibit which called forth special praise was a magnificent vase of twenty-four flowers of the new Carnation Wodenoth exhibited by Mr. Frank E. Whitney, Fishkill, N. Y., and which was unanimously awarded a first-class certificate. The variety is pure white, the flowers, borne on long stiff stems, measuring 3 1/2 to 4" across. This splendid new introduction has been exhibited before the New York Florists' Club, and at the Pittsburgh Carnation convention of this year where it was awarded a certificate of merit, having scored 90 points.

E. Jenkins gave an interesting lecture upon the growth and pruning of trees, under the title of "Tree Surgery." He showed in a practical manner how trees are increased in value and live longer under judicious pruning. Mr. Jenkins took up the discussion in a very interesting way, and showed how the market value of timber could be increased by thinning, etc. Most of the members asked questions upon the subject, which Mr. Jenkins answered in a very able manner; he was accorded a hearty vote of thanks for his instructive lecture. No date has been decided upon for the Society's annual dinner, as yet. The committee in charge are Messrs. E. Jenkins, A. H. Wingett, A. J. Loveless, A. J. Jenkins and A. McConnachie.

The annual hall, which is always looked forward to with much interest in this vicinity, was held on Monday, January 24, and was a decided success, financially and otherwise. The committee, of which F. Butler was chairman, is to be congratulated upon the success attending its efforts. Rose and Carnation night will be held on Saturday, April 2. G. H. INSTONE, Secretary.

Morris Co. (N. J.) G. and F. Society

On February 9 the Morris Co. Gardeners and Florists' Society held its regular monthly meeting. Though the night was stormy there was a good attendance. Past-president Percy Herbert came all the way from Newburgh, N. Y., to see us and as every member is a personal friend of his, you may be sure he had a warm welcome. The frequent Havanas he brought with him were much enjoyed.

Harold B. Vyse, by request, read a paper on "The Cultivation of Pease in Pots." It was an able paper. He told, briefly, how he does the trick, and as we are all familiar with his grand display of Poinsettias around Christmas, year in and year out, we were eager to hear from him. He was accorded a hearty vote of thanks. The preliminary schedule proofs were on hand, and after being gone over and

errors corrected, the same is to be printed and distributed next week. Considerably over \$2000 is scheduled, and we expect to come near \$3000 in the regular schedule to be issued in July. The funds are pledged and our executive committee is making a supreme effort to have a show that will be a credit, not only to our own Society but to every other Society that will help us out. We will have a grand show in Morristown this year. The committee is getting encouragement and promises of support from societies and individual growers. The letter from Mr. Elmer D. Smith, president of the C. S. A. read at the January meeting, announcing the C. S. A. would hold its show and offer its special prizes in conjunction with our Society gave us a great boost. Everything looks rosy, so far, but there is a lot of work ahead. Preliminary schedules can be had by addressing E. Reagan, secretary, Box 334, Morristown, N. J.

Four new members were added to our list: Edward McElhaney, New Brunswick, N. J.; John Whalen, Patrick J. Smith, and Geo. Fisher of Morristown, N. J. Next meeting will be Carnation night, and that has for the past few years been a great night. Let us hope the growers will do as well this year. We are to have an informal discussion of the Carnation, to be led by a veteran.

J. A. Peterson of Cincinnati, O., showed a magnificent thing in Begonia Glory of Cincinnati which was awarded a certificate of merit. C. H. Totty had a collection of Sweet Peas, 18 to 20 inch stems. His Gov. Fort was awarded a certificate of merit. E. R.

Horticultural Society of New York

The first meeting of the Orchid Section of this Society was held at the American Museum of Natural History on Wednesday, January 26, at 8 p.m. Mr. Clement Moore, chairman of the section, in the chair. A most enjoyable evening was spent, all present taking an active part in the proceedings. It is especially desirable that the meetings of the section assume an informal character, so that all may feel at home, and free to enter into the discussion. It was the presence of this feeling which made the first meeting so enjoyable, and an endeavor will be made to foster this condition.

Responding to the invitation extended in the announcement of the first meeting, a number of bright and unusual flowers for exhibition and discussion. E. H. Roehrs of Rutherford, N. J. exhibited a large collection of cut Cyrtopodium blooms, especially noteworthy among them being Harefield Hall, Julius Roehrs, Wm. McKinley, Stevens, and aureum virginalis. J. A. Manda of West Orange, N. J., showed a fine form of Cyrtopodium Charles Canham. Lager & Hurrell of Summit, N. J., added to the interest with a number of plants, among them being a fine form of Odontoglossum crispum and Miltonia Phalaenopsis. George V. Nash exhibited cut blooms of some of the unusual plants of the Oakes Ames collection, now forming a part of the Orchid collection of the New York Botanical Garden. Among these were: Tainia viridi-fusca, often known as Calanthe viridi-fusca, from India; an attractive form of Paphiopedilum tonso-Chamberlaini; and Paphiopedilum Duchess of Portland; and Paphiopedilum perianthodes, an undescribed species, from the higher elevations of Ecuador, was also shown. The next meeting of the section will occur on February 23, at the same place and time. It was decided to devote the evening to a consideration of the genus Cattleya, Mr. Nash opening the discussion with a short talk on the types of the flowers of that genus, illustrated with colored lantern slides. It is hoped that those attending the meeting will bring flowers illustrative of the genus. G. V. N.

New Jersey Floricultural Society

The annual installation of officers took place at the Society's rooms, Lindsley Hall, Orange, on February 11, when Albert F. Larson, president; D. Kindsgrab, vice-president, William Reid, secretary, and Walter M. Gray, treasurer, stood upon their duties for the current year. The ceremonies were postponed from the January meeting because of a severe storm on that date. The president reception followed and was attended by many invited guests. During the past year the Society has held ten executive sessions, four of which have been devoted to special flowers, the Carnation, Rose, Dahlia and Chrysanthemum. Instructive papers have been given by Chas. H. Totty, W. A. Manda, Rev. L. H. Lightpie and Robert Gray. Public interest was notable in an increase in attendance at shows. The membership has been increased by eleven new members and there was loss by death of but one, the late John Crosby Brown. There have been 157 awards of various kinds given at the meetings for the exhibition of flowers of merit; of these 37 were first-class certificates, 43 certificates of merit, and 47 cultural certificates. This speaks well for the skill of the growers.

The floral display was choice and up to the usual standard. In addition to contributions from neighboring estates were exhibits by Lager & Hurrell of Summit N. J., of Orchids, many of which were uncommon and beautiful, particularly *Laelia anceps alba*, *L. anceps rosea*, *L. anceps Sanderiana* and *Phalenopsis Schilleriana* of fine color and cultivation.

Charles H. Totty of Madison exhibited a hybrid *Ilpeastrum* having four large flowers on a single stem, in a 4-in. pot, resembling *Johannell* in color and form. This is one of his own introduction.

Among the exhibits from near estates were: Carnations and flowering bulbs by Charles Hathaway, Max Schunder, gdr.; Carnations by S. & A. Colgate, William Reid, gdr.; Roses by the Estate of John Crosby Brown, Peter Duff, gdr.; Richmond, Bride and Bridesmaid Roses by Thomas A. Edison, Frank Frews, gdr. The judges for the evening were W. H. Duckham, Charles H. Totty and Wm. J. Stewart.

J. B. D.

Treasurer Gray surprised the members by telling them that he has the promise of twelve silver cups from a number of ladies and gentlemen in the Oranges, to be awarded at the end of the year for the gardeners or commercial growers getting the highest number of points for Roses, Carnations, Flowering Plants, Foliage Plants and best display of Orchids; for the best display of fruits and vegetables; and the best seedling Carnation not yet disseminated, grown by the exhibitor. Treasurer Gray is only an amateur, but is one of the most enthusiastic members, and is a prominent Dahlia grower.

A loving cup was presented to our retiring president, Malcolm MacRorie, for faithful services, and as a token of the high esteem in which he was held by the members of the Society.

President Larson, on taking the chair, thanked the members for the honor they conferred on him in electing him to office, and hoped the members would give him all the support possible, and make the coming year a great success.

An honorary member, Rev. L. H. Lightfoot, and botanist of the Society, welcomed our visiting guests, who came from Boston, New York, Madison and other places. Addresses were given by Wm. Duckham, Chas. Totty and E. Reagan, all from Madison. They all spoke of the forthcoming Chrysanthemum show, to be held in Merristown next fall, and hoped the members from our Society would participate and help to make this the grandest show of its kind ever held in this country. They stated that already \$2500 was secured for prizes, and that the preliminary schedule was now in the hands of the printer. Addresses were also given by Wm. J. Stewart, J. Austin Shaw and others.

The Wilson Bros. entertained the members with clog dances, Chas. Paterson gave songs and stories, and Geo. Smith, the florist, ably rendered the "Tinker's Wedding." Refreshments were a prominent feature of the evening. WM. REID, Secretary.

Tuxedo (N. Y.) Hort. Society

A meeting of the Tuxedo Horticultural Society was held on the evening of February 8. In the unavoidable absence of the president, Thomas Murray, Carl D. Schaeffer presided. James MacMachan acted vice-president, and David McIntosh secretary. There were vacancies. Eight candidates were balloted for and elected; there were several other candidates whose names were received too late for action that evening. There was a great deal of routine business transacted. It was decided, in view of the fact that the Society is now enjoying, that it would be well to have a reunion, this will take the form of a lively social session in the Village Club Room on the evening of March 2. The next regular meeting of the Society will be held on March 8, when a committee will be appointed and put to work on a schedule of premiums for an exhibition. The horticulturists in Tuxedo Park and vicinity are quite enthusiastic in their support of the Society. It is also gratifying to realize that the residents of the Park, and the officials are very favorably disposed towards it. D. M.

Dobbs Ferry (N. Y.) Hort. Society

This Society held a regular meeting on Saturday, February 12, at its rooms in Oddfellow's Hall, Dobbs Ferry. The following members were appointed as a committee to arrange for a June show: R. Borham, H. Keling, P. Clinton, R. Hutchins, J. Schreiber, C. Wilson and H. Harms. The exhibit for the meeting consisted of stagings in a competition covering vases of twelve cut flowers of any kind except Roses. The members competing were: R. Borham, gdr. to J. J. McComb Estate; P. Bradley, gdr. to Mrs. S. Goodman; H. Kasting, gdr. to the Misses Masters; C. Wilson, gdr. to Miss Flower; H. Keling, gdr. to Scott McComb; H. Jordan, gdr. to E. Gould. Mr. Borham took first prize, Mr. Bradley second.

H. HARMS, Corr. secy.

ORDONEZ BROS., 41 W. 28th St. New York
also Madison, N. J.

St. Louis Florists' Club

The meeting of the St. Louis Florists' Club took place on last Thursday afternoon, Feb. 10, at 2 o'clock. The attendance was not as large as was expected but comments were made on the good showing of our suburban members who come a long way to attend the meeting as contrasted with the poor showing of the city members. The trustees were also taken to task for the lack of interest they show in the meetings. When President Windler opened the meeting, there were present twenty-five, twelve of them city members. The meeting opened with its usual routine business. Messrs. Dewever and Cannon, a committee on advertising through a florists' club, made their report, after which a lengthy discussion took place in which Messrs. Sanders, Ammann and Fillmore were on one side and Messrs. Guy, Young and Halsted on the other. They made things very interesting for the members for a while when, on a final vote, three more members were placed on the committee to take the matter up again and report at the next meeting in March. The committee now consists of Messrs. Dewever, Cannon, Young, Guy and Smith. When this committee reports interesting development are expected.

Mr. J. A. Peterson of Cincinnati exhibited one of his new plants of *Begonia* *Glory of Cincinnati*. The Chair appointed a committee to pass on it, who reported as follows: "We, the committee, agree that the new *Begonia* 'Glory of Cincinnati' is a grand variety and a great improvement on existing varieties of the same type."

Henry Wetzel and Chas. D. Hecht, growers, who live in St. Louis County, were elected to membership. Fred Ammann, Secretary of the Illinois Florists' Association, extended an invitation to the members to attend the annual convention of the association which took place Feb. 15-16, at Champaign, Ill. The invitation was accepted with thanks and quite a few present expressed their intention of attending. Wm. C. Smith was then requested to read his paper on "The Troubles of a Wholesaler." Mr. Smith said he was prepared only to give a talk on his troubles which he did in an excellent manner. On motion by the committee a certificate of merit was given the new *Begonia* "Glory of Cincinnati."

The next meeting of the Club takes place Thursday afternoon, March 10. ST. PATRICK.

PALMS And Other Seasonable Stock

We have an extra good stock of *Forsteriana*, made up, three plants in a pot or tub, all clean, perfect plants. We need to reduce our Palm stock, and are giving extra values.

WANTED

FARM AND GRASS SEED MAN

One who knows, can talk and sell these seeds to farmers and others in a city store—must be a man of good address with first-class recommendations and strictly reliable. We don't want the fellow who "thinks he can" and "is willing to try," it's the fellow beyond that stage. One that has already secured a successful salesmen's position who merely waits on customers to what they ask for but can make sales. We have a good opening right now. Speak quick. A hustler of middle age preferred. LIVINGSTON SEED CO., Columbus Ohio.

Fernwood Nursery

The publication is well illustrated, and is bound in handsomely lithographed covers.

Newport, R. I.

What is to be one of the very best Summer residences in this city is the new home, "Belvoir" which is being erected on Beacon Hill for Com. Arthur Curtis James. The substantial stone dwelling which stood there when purchased by Mr. James has been demolished and to secure sufficient area for the new building the rocks have had to be blasted and drilled out, a force of something like 250 men having been employed all Winter on this work. When the

Headquarters for Easter Plants

AZALEAS One of Our Specialties

PREPARE FOR EASTER

Have Azaleas to burn, the best in the land, the best in the land the best in the land, Azaleas in finest colors, to beat the band, to beat the band, to beat the band

**THE BEST EVER**

Better than ever are the plants whose gleaming Blossoms and leaves shine bright in Aschmann's store; Flowers of the kind of which we are always dreaming. More nearly perfect than all grown before; Lilies with whiter sheen; Azaleas, richly tinted; Ferns with their lacy fronds, like bridal veils; The Araucaria branches, fruit with dollars minted. For florists' use after Easter sales.

Azalea Indica

In large sizes we have the following varieties: *Hernard Andrea alba* (white), *Niebo* (white double), *Dr. Moore* (double pink), *Memory de Van Rostle* (large-flow-ering double pink), *Mme. Van der Cruysen* (double pink; one of the best known varieties), *Heleena Tellman* (rose; very attractive), *Empress of India* (double variegated), *Schreveriann* (double variegated), *Apollo* (red), all covered with buds. Price: \$1.50, \$2.00, \$2.50 to \$3.00 each.

In smaller sizes we have *Empress of India* (double variegated), *Simon Mardner* (double pink), *Vervaeckiana* (one of the old standard double variegated), *Apollo* (red), *Mme. Van der Cruysen* (pink; the standard of all the pinks), *Deutsche Perle* (double white), *Schreveriann* (double variegated). Price: 75c., \$1.00, \$1.25 to \$1.50.

Prof. Wolters, one of the so well known bright variegated, \$1.00, \$1.25 to \$1.50.

KENTIA *Foresteriana*. Imported last Spring (1909) from Ghent, Belgium, in fine condition, 6-7 in. pots, 35-40-50 in. high, \$1.25, \$1.50, \$2.00, \$2.50 to \$3.00; 4 in. 20c. *Belmoreana*, 6-in., \$1.25-\$1.50 each; 4-in., 25c.; 3 in., 10c.

Please mention the Exchange when writing.

landscape work which is in charge of the Olmsted of Boston, is completed, there will be a fairyland among the rocks surpassing anything ever attempted here. An important sale of real estate is that of Robert N. Carson on the Cliffs, to E. C. Knight, Jr., who is to add it to his place, "Clarendon Court" on Bellevue ave. The price paid was \$200,000 and, by this addition, Mr. Knight not only owns from Bellevue ave. to the store but also Gull Rock, the rocky island in front. The lawn is to be extended after some of the present buildings have been removed, and a range of glass erected. A novel feature in the sunken garden at the Knight place is that evergreens are used entirely in filling the beds which were formerly planted with

NOTICE: LILY BULBS of the larger size (9-10 in.) were very scarce to obtain last Fall owing to the wet weather in Japan; not even 20 per cent. could be supplied. But our grower in Japan, knowing well our position, has taken good care of us and we were one of the few fortunate to receive \$900 of 9-10 in. bulbs from him—our full order of last Spring.

EASTER LILIES, Japan Multiflorum, of our own importation, raised from special 10-in. bulbs, 6-in. pots, right for Easter. This year I can say we have the finest lot, free of disease, we have had for years past. The large demand for Lilies exceeds the supply every year; we, therefore, plan, ask that you order early. Price, plants with five buds and upwards, 10c. per bud; plants with four buds, 12c. per bud. We can satisfy all wants if ordered soon.

Owing to the small profit in the growing of Easter Lilies, an order for a reasonable amount of other stock should accompany all orders for Lilies.

CINERARIA *Hybrida*. We have a house full, 125 ft. by 21 ft. of the choicest colors—Henry F. Mitchell Co.'s best strain, just right for Easter. 5, 6½ to 6 in. pots, medium height, 20c., 25c., 35c., 50c., 75c. to \$1.00. Same ready now if wanted.

BEGONIA, New Improved *Erffordii*. Always in bloom, Summer and Winter; 4-in. pots, very strong, \$2.00 per doz.; 5½-in., in bloom and bud, 25c., \$3.00 per doz.

PRIMULA *Oboconica*, 5½-in. pots in bloom, \$2.00 to \$2.50 per doz.

FEIKNS for dishes, 2½-in. pot, \$5.00 per 100.

Have some white *Azalea Deutsche Perle* and *Vervaeckiana* now in bloom if wanted, at 75c. and \$1.00 each.

Hyacinths. Raised from first-class bulbs of our own importation. These Hyacinths cannot be compared with ordinary stuff raised from cheap bulbs floating the market, King of the Blues (dark blue), Grand Maître (lavender blue), Gertrude (pink), and La Grandesse (white). 4-in. pots, \$12.00 per 100.

TOURNESOL TULIPS. Red or yellow variegated. This is the best selling double Tulip in the market. Will stay in bloom in good condition ten days. Three bulbs in one 4-in. pot, \$1.50 dozen pots or \$12.00 per 100 pots. *Murillo Tulips*, best double pink, 3 bulbs in a 4-in. pot, \$1.75 per doz. pots.

Double Von Sion **NARCISSUS**. The best yellow Narcissus in the market, sells at sight; three double-nosed bulbs planted in one 5½ to 6 in. pot. Price, \$2.00, \$2.50, \$3.00 per dozen pots.

IPOMOEA *Noctiflora*. Best pure white Moon-vine in market, very fragrant and as big as a saucer. On this variety we have a world-wide reputation as growers and shippers for the last twenty years. Price, \$25.00 per 100, \$5.00 per 100, 10,000 are now ready.

CINERARIA *Hybrida* *Grandiflora*. 5-in. 20c.; 6-in., \$2.00, \$4.00, \$5.00 per doz. 460 right for Easter.

COCOS *Weddelliana*, 3-in., 15c.

BEGONIA *Flambranca*. Sells at sight, 4-in. pots, 20c.; 5½-in. pots, 25c.

FICUS *Elastica* or *Robber Plant*. Home-grown and Belgium stock, 5 to 6½-in., \$25.00 per 100, \$5.00 per 100, 10,000 are now ready.

LATANIA *Borbonica*. 4-in. pots, 20c.

HYDRANGEA *Okakea*. Already forced, in bud, just right for Easter, 6 to 7-in. pots, 25c., 40c., 60c., 75c., \$1.00 to \$1.50 each.

SPHRAEA *Gladstone*, 6 to 7-in. pots, large stuff, 50c., 75c. to \$1.00 each.

FERNS, *Todendoides* and *Whitmani*, 6-7 in. pots, 50c., 75c. to \$1.00; 5 to 5½ in., 35c., 40c.

tender carpet bedding plants, thus doing away with much labor. The plants are trimmed three times during the Summer and, after two years' growth, are only 9" in height; for an edging the dwarf box is used. One of the combinations is *Retinispora plumosa aurea* with *Retinispora squarrosa* var. *Veitchii*, and the effect is very good.

Sergt.-at-Arms Wm. F. Smith, of the Newport Hort. Society, who had the misfortune a week ago to have his arm dislocated at the shoulder, expects to be able for work again in a few days.

W. Scott Sisson is quite ill at his home on Bliss road, the attack having come on quite suddenly.

ALEX. MACLELLAN.

F. E.—The Best Advertising Medium

Exigencies of the Supply Trade

The blizzard in the mountains of western Pennsylvania has been making life hard for the evergreen shippers of that section. The roads have been drifted high with snow for some time. The Allegheny Mountain Evergreen Co. of Farmington, Pa., recently sledged five hundred bags of sheet moss twenty-five miles to the nearest shipping point, shoveling their way through high banks of snow a great part of the distance.

Retail Notes

SOMERVILLE, MASS.—The Reynolds flower store in the new Central building was recently damaged by fire.

TRENTON, MO.—The Trenton Floral Co. has been incorporated. The directors are L. A. Warden, H. N. Longfellow, B. A. Barnes, C. W. Sloan, and L. Derocher.

WINONA, MINN.—John Fuhlbruegge, florist, has completed arrangements for opening a branch store in Rochester, Minn., which he will supply from the Winona greenhouses.

CUMBERLAND, MD.—Fred. M. Ruppert, for several years connected with John M. Bopp of this city, in the floral business, has purchased Mr. Bopp's business and has taken over the same.

WASHINGTON, D. C.—The florists have filed a protest with the House Committee on the District of Columbia, against the amendment of the bill "For the proper observance of Sunday as a day of rest in the District of Columbia." The florists claim that if the bill is enacted into law they will be unable, lawfully, to make up funeral wreaths on Sunday.

Laying Out a Garden Walk is an Art

In the new garden the making of a walk is as much a matter of study and care as the sidewalk in front of the house. There is nothing so good for this purpose as concrete, but where the expense of that ideal material is too great there can be substituted brick, flagstone, cobbles, pebbles or limestone screenings, says The Delineator for March. The walk should be the only formal stiff feature about the well-planned home garden, and time, with the growth of the foliage along its sides, will cure that to a great extent.

The walk should "lead from somewhere to something"; it should have a purpose, which is primarily to give access to the garden, but if there are any landscape features in the garden, as there should be, it should become a portion of their motive. If there is a pergola, arch, arbor, garden-house or garden seat, the access thereto should be by the main walk, and not by a lateral path. This presupposes a garden of considerable extent, as these features would have no place in a tiny one, but, lacking these, there must still be something to which the walk leads. It should not end against a wall, fence or the side of a building, but if it approach them, should be continued along them to end definitely somewhere, as a door to a building or a gate in a wall fence or hedge. This marks the real difference between the walk and the path. The latter may lead anywhere and end nowhere; it may lead into and stop at a clump of bushes, and may wind and turn at convenience.

The Black Rose

Dennis Trapley, a rheumatic cripple of Savannah, Ga., has discovered, it is stated, by the daily press, a process whereby black Cotton and black Roses can be grown, and was last week in Washington trying to obtain a patent on his formula.

Here is the history of Trapley's "discovery," as related by him to Mr. Billings, Assistant Commissioner of Patents:

"After fifteen years of experimenting I have discovered a process by which black Roses and black Cotton may be produced. The formula is inexpensive. It consists of three inexpensive chemicals which are diluted with water.

"I have taken an ordinary Rose bush and planted it in rich earth, and by feeding it this chemical fluid have produced a Beauty as large and heavy as an American Beauty and as black as coal. The petals of this Rose have the same gloss and lustre as the American Beauty. The feeding process is exactly the same as watering a plant.

"As the first shoots of the bush push up through the earth an extraordinary darkness can be noticed. As they grow their colors become darker. The same is true of the foliage. The leaves of the bush are almost black. The buds when they appear are black.

"One of the peculiarities of the process is that after a certain number of applications during the first year it can be stopped and for two seasons the plant will bear black flowers. If the feeding process is not continued in the third year the bush will again assume its natural state.

"What is true of the Rose is true of all other flowers and also of Cotton. By the use of my chemical secret I can produce black Cotton and it will cost little or nothing as compared with black dye. One of the features is that the chemicals seem to have a general good effect on the plants. Those I have experimented upon have grown to extraordinary size and are of a fine fibre.

"The day my process is protected by patent I can dispose of it for \$500,000. This proposition has been made me."

Born in the backwoods of Georgia, Trapley can scarcely read or write. When a boy, Dennis, as he is known to every merchant in Savannah, fished in the creek which ran by his father's cabin. Many a night he slept on the bank with the heavy malarial mists from the waters as his only covering. When he was fifteen he became afflicted

with rheumatism, and at seventeen he was a distorted sufferer. His hands are drawn and misshapen, his legs are crooked, his head is drawn down on his chest until he can see only sideways when standing.

When Trapley was seventeen he moved to Savannah to get treatment. He began making keyrings, upon which he marked initials. Soon he became known as the "keyring boy of Johnson Square." On a corner, Dennis, in an invalid's chair, would sit fourteen hours a day making keyrings and selling them. For fifteen years he has been following this life.

In the Spring and long Summer evenings, after he went home, Dennis would plant Roses and cultivate them. From early boyhood he had one thought, that of producing a black Rose. First he tried grafting. Failing, he began the use of chemicals. This thought occurred to him after seeing a farmer spread lime on the fields which he was to cultivate. Dennis believed that if light soil and lime would produce a light Sugar Cane and light colored syrup, some chemical might produce the black Rose. About five years ago, he says, he produced the first bloom of black Roses, also black Cotton. Later he produced other black blooms.

Our own personal opinion of the value of a black Rose (really, it is not such, but merely colored by chemical action in the ground—if the story is true) is echoed in the following extract from one of our metropolitan papers:

"The utility of a black Rose is questionable. It will never satisfy the eye like the red, yellow or white Rose. A new poetry of Roses must be made to fit it; no lover will come to use it as a symbol of his passion. At its best it will seem a thing of mystery. A bunch of black Roses, carelessly laid on the rail of a parterre box at the opera, will not necessarily charm the vision of the unfortunate lookers-on in the stalls. The near-sighted ones may fancy that the principal occupant of the box is displaying her overshoes. A black Rose in a lovely woman's hair will resemble a rosette of silk or velvet. As a gift, the black Rose, after its first novelty has worn away, will fit only funeral occasions. Even then its oddity, and the extravagance its presence implies, will serve to make it seem unsuitable. The advent of the black Rose will be an event, a triumph of botanical chemistry, a subject for learned discussion and some more or less tedious frivol. But, after that—what? Who really wants a black Rose?"

NEW YORK, February 16.—Since our last report, conditions in the flower market have not improved in any manner and the present slump is likely to continue for the next few days. Immense quantities of flowers have been received and the demand is so slight that the ice boxes of wholesalers are filled to overflowing; consequently, sales at ridiculously low prices are made. Just what is the cause is hard to determine, but the fact remains that the increased shipments of all varieties of flowers have accumulated to such an extent that it is a matter of getting just whatever prices are possible.

American Beauty Roses are about the only good thing that holds price; top grades realize 50c. Other grades are of poor quality and no set price can be quoted for them. Tea Roses of every description are very plentiful, and wholesalers to effect clearances have to yield to buyers' figures.

Carnations, although arrivals are, generally, of fine quality, have dropped in price, the legitimate demand for them being so small. Many sales have been recorded at prices as low as \$1 per 100 for good grade flowers, while flowers two days old are disposed of in job lots for \$5 per 1000, to clean up. Very few of the fancy grades realize \$4, the majority being disposed of at \$3.

Cattleyas also drag considerably, but for good flowers as high as 40c. is obtained. Much stock of the poorer grades is disposed of at ridiculous figures when consideration is given to the class of flowers. Gardenias are hard to move, sales at \$5 per 100 being plentiful. The best bring as high as \$150 per dozen. At no time of the season have Lilies been so plentiful, and unless some unlooked for condition arises many will have to be thrown away, as thousands of them are being held over in the many ice boxes. Prices range from \$6 to \$8 per 100, and these are practically general.

Bulbous stock of every variety, especially Tulips, has done more to cheapen the price of other product than anything being received. Tulips can be had at all prices from 75c. per 100 up. Daffodils are especially plentiful and quotations are unprintable.

Violets are an awkward proposition with the wholesalers and the efforts to clean up those left over from St. Valentine's Day have been unsuccessful. Sales have been made at 30c. per 100, and at time of writing this report thousands still remain to be disposed of. First-class stock is held at 50c. per 100, but owing to the immense quantity of stock on hand it is a hard matter to maintain this price.

Sweet Peas are accumulating; best flowers realize \$1.00 per 100, but so much stock is shipped in that a clean-up is impossible; the majority of shipments contain small weak stemmed flowers.

Asparagus plumosus is in good demand, and about the only thing in which there is any lively business done. More could be used if obtainable. The prices range from 40c. to 50c. a bunch for good stock.

PHILADELPHIA, February 14.—During the week previous to this date a large amount of stock of all kinds was shipped into this market, and as the demand was light a lowering of general averages resulted. The trade on St. Valentine's Day was not as large as was expected, although a lot of flowers especially Violets and Sweet Peas were used. American Beauty Roses have been somewhat short in supply, and more good flowers could have been used, at an average price of 60c. each. Many poor flowers of the cheaper grades of this class are to be seen, but they move very slowly. Tea Roses are moving well but the supply is far beyond the demand, except for the variety Mrs. Jardine, which maintains a splendid popularity with the high class stores, and realizes good figures. Last Saturday a general clean up of the Rose market was made possible by the fakers handling the flowers in large quantities, at prices varying from \$2 to \$4 per 100, the good weather making street offerings possible. Medium grade Roses were in the best demand at prices ranging from \$6 to \$8 per 100.

Carnations have dropped in price, the

average for good standard varieties being \$2 per 100. Small sales realize greater values, and novelties, what few are seen, are held at \$4 to \$5, this referring to Pink Delight and the very best grades of standard varieties.

Cattleyas are more plentiful and sales are made at 40c. to 50c. each, with plenty on hand for all ordinary purposes. Cypripediums have shortened in supply, but the demand is not heavy enough to insure clearances if heavy shipments were received; prices remain at 8c. to 10c. each. Gardenias are plentiful, and good flowers realize \$2 to \$3 per doz. Considerable short stemmed stock is making its appearance, and is sold for any price obtainable, from 5c. each up.

Lilies are more than plentiful and wholesalers would be glad of a chance to clean out at most any figure; some sales of fair quality flowers are made at as low as \$4 per 100. Lily of the Valley is in good demand, especially top grade, the price for which averages \$3 to \$4 per 100. Several shipments of inferior grade stock have had a tendency to create somewhat of a glut in this article. Violets have moved well, and locally grown stock has been sought by the retailers in larger quantity, due no doubt to the demand for St. Valentine's Day. Good grade Violets have realized 60c. per 100, both double and single, and prices have held well. Bulbous stock of all kinds has dragged, especially Tulips, many of which have been cleaned up at \$1 to \$2 per 100. Good grade flowers of the double varieties reach \$4 in small lots, but most of the stock is short in stem, and of poor quality. Daffodils are more plentiful and the price has dropped to \$2.50. Several varieties are now to be had, all of which meet with about the same degree of popularity. Sweet Peas, the better grades of which are quickly moved, realize prices varying from 35c. to \$1.25 per 100, according to length of stem and quality. Greenery of all kinds, especially Asparagus plumosus, is in good demand, and more could be used if obtainable. Lilac is still scarce, and the price remains at \$1 per bunch for top grade, other grades realizing 50c. up. Alyssum, Mignonette, Acacia and other miscellaneous stock is in fairly good demand, and move well, at prices according to grade.

BOSTON, February 15.—During the early part of the week, as Lent came in, business slackened off a bit, but as the crops of flowers to certain lines were not ever plentiful prices did not drop much.

Owing to the severe snowstorm on Saturday morning last, material was not cleaned up quite as well as it should have been.

St. Valentine's Day made a change in business for the better and sales were good.

Bulbous material is quite plentiful and prices are, naturally lower accordingly. Violets are quite plentiful but owing to the demand on St. Valentine's Day prices have held well.

There are some good Forget-me-nots and the demand was good this week. Antirrhinums are getting more plentiful and the quality is improved. Callas are considerably more plentiful. Lilies of the longiflorum types are not over plentiful, therefore prices are holding up.

Sweet Peas are much more plentiful and the best, with long stems, bring from \$1 to \$1.50 per 100. Lily of the Valley is getting more plentiful; some of it is not quite up to standard quality. Roman Hyacinths are getting quite scarce and are being replaced by the Dutch varieties.

Roses are still on the scarce side; Pink Killarney and American Beauty with long stems are quite scarce.

Orchids are not quite as plentiful and prices are holding their own.

INDIANAPOLIS, February 14.—The popularity of St. Valentine's Day for flower sending has once more asserted itself. At the close of Monday's transactions it was evident that all the retailers had had a prosperous holiday trade. Expensive purchases were the exception, but the amount of small boxes was amazing. Unusually warm bright weather caused many plants to be thrown on the market. For these, there was not the anticipated call and many were left for another day. Cut flowers ranging from 50c. to \$1.50 per dozen were seemingly looked for by the public.

Please mention the Exchange when writing.

Funeral work has been light of late and much inferior stock accumulates.

Carnations were most numerous at \$2.50 to \$4; many of them are splits, wholesaling for half that amount.

The flower shops present a gorgeous appearance with the wealth of color obtainable with pans and baskets of Dutch Hyacinths, Jonquils and other bulbous materials. Prices for plants and cut flowers change but little in this line.

The quality of Roses supplied shows a decided improvement over last week, but prices are, if anything, more moderate; \$8 to \$10 is obtained for high grade Killarney and Richmond. Bride and Bridesmaid are \$2 cheaper, but the quality is on a par with the others.

Medium American Beauty are hard to obtain at \$15 to \$20; shorts at \$5 and selects at \$50 are more plentiful.

Forget-me-not, Freesia, Mignonette, Lilac and Pansies give variety to the florist's window displays. Single Violets are certainly numerous this year at 75c. a 100; they sell even better than the Hudson River brand at the same price.

Sweet Peas are noticeable for their fine quality at 75c. per 100.

Azalea Mollis has added her beautiful coloring to the conservatories, already well filled with a choice line of Cyclamens, bulbous plants, Primroses, Lilies and Rhododendrons.

CHICAGO, February 14.—Stock has increased greatly, and business has been quiet the past few days, but on Saturday and Monday things brightened up for the Lincoln's Birthday demand, and St. Valentine's Day following on Monday stock commanded a little better price, receding, however, to the regular market quotations, the day after.

American Beauty Roses are beginning to show up in better condition and some quite good stock, both as to quality and color, is obtainable. Killarney is, however, just as scarce, and, excepting with a few growers, is off crop. Bride and Bridesmaid, Richmond, and all other varieties while scarce are not missed much, as the demand is very light. The prices, however, remain about as last week.

Carnations are coming in abundance, of good quality, fine coloring and long stems. The demand is not heavy enough to consume all that are shipped in. All bulbous stock is excellent. There are plenty of all sorts of Tulips, Jonquils, Narcissus and Hyacinths, both in cut

flowers and in pots and pans. Lilies are coming in nicely, good firm flowers, and are meeting with a fair demand. Callas are in quantity enough to meet all demand. Lily of the Valley is not quite so much sought after, as there is a lull in wedding business. Violets are plentiful; the complaint is that not nearly as many were consumed for St. Valentine's Day as is usual. Mignonette is grand, with large heads, fine stems and good bloom.

The supply of Orchids is about equal to the demand. They are not quite so great in quantity as in the past few weeks. The prices are unchanged. Gardenias are coming in fine shape. Some Orange blossoms are being shown about the market. Greens are plentiful and move well. Smilax is in the same healthy state as in the past three weeks. Stocks, Freesias, Paperwhite Narcissus, some Forget-me-nots and Candytuft are also obtainable.

ST. LOUIS, February 14.—Weather conditions were with the trade last week, clear and cool and the market has everything in plenty; even Roses, which have been scarce for the past month came in more freely and all the commission houses had enough to fill orders with; a good crop is looked for from now on and prices not so high, from 3c. to 8c.

Carnations are in great abundance, in fact, they can be classed as a glut as many of them were left unsold last week; all stock was of the best quality. Prices from 1c. to 10c. California Violets are selling well today (St. Valentine's), and are coming in in great lots; all of last week they were a glut and sold as low as \$1.50 per 1000. Today the demand is great and prices are up to \$3 and \$4 per 1000, but the supply is much greater than the demand and prices must come down before the day is over. Callas and Harrisii Lilies are more plentiful at \$12.50 per 100; Roman Hyacinths and Paperwhite Narcissus at \$2 to \$3. Von Sion and Tulips, best grade, \$4 per 100.

Sweet Peas, too, are in good demand at 50c. to \$1.00 per 100; Smilax, Asparagus and other greens have good demands. Among the retailers the report is that business has been very good since Lent began. Of course, society functions are now at a standstill and will be for the next six weeks when a busy season beginning with Easter Sunday is looked for.

ST. PATRICK.

 CUT FLOWERS AT WHOLESALE

New York

Henshaw & Fenrich will have some sprays of Japanese Cherry blooms for sale on Feb. 22, Washington's Birthday. This firm has recently received from the secretary of the American Rose Society acknowledgment of their offer of \$25, for the best vase of Killarney Roses, to be competed for at the coming convention March 16.

Walter F. Sheridan, has on exhibition a vase of Shasta Carnations, sent by Bauer & Smith of Indianapolis, Ind., which were intended for the exhibition table at the New York Florists' Club last Monday night, but, unfortunately, they arrived too late. But for several days after shipment the flowers showed their good keeping qualities, and were favorably commented on by the many members of the trade who saw them.

M. A. Bowe, Broadway and 34th st., has the order to furnish the decorations at Mendelssohn Hall, on Feb. 20, for the testimonial dinner to be given to Watson Gilder by the architects of America. The work of decorating will be in charge of Arthur Merritt, the well-known decorator, and will consist of Palms, flowering plants and cut flowers tastefully arranged.

Business on St. Valentine's Day was not up to the expectations of many in the trade; many who had lots of flowers to offer still had them days afterward.

Violets proved to be too abundant, and many hundreds were disposed of at a loss to clean out.

P. McKenney has made several small improvements in his store at 42d st. and Fifth ave., and says that while business is not over brisk he is getting a good share of the orders going.

It is understood that Mr. Neff of the Flower Shop, 126 W. 42d st. is about to give up the store.

The store windows of the prominent retailers have been replete with good things. Thorley's House of Flowers has shown Lilacs, Azaleas, Adiantum Farleyense, as well as vases of Killarney Roses. Thos. Young, Jr.'s store window was decorated with Rhododendrons, Azaleas, vases of Gardenias and Orchids. Alex. McConnell displayed various shrubs in full bloom, including standard Prunus triloba, Forsythia, Lilac, Apple.

A. N. Pierson of Cromwell, Conn., passed through the city last week on his way to Florida, where he will spend the next few weeks.

Chas. H. Totty of Madison, N. J., has been very successful in raising from seed some plants of Amaryllis, some of which have four immense flowers on one stem. Seeds of the Pompon Chrysanthemums offered to the trade by this gentleman, which will bloom next Fall, are meeting a popular demand.

The Forster-Mansfield Mfg. Co. has been very busy the past few days, furnishing material for many large decorations. The Kervan Co. has recently booked many orders for wild Smilax, and other material useful in decorations of every kind, while the demand for dagger, and fancy Ferns, and Galax leaves keeps all hands busy.

Bowling at Flatbush

Last Thursday, Feb. 10, Messrs. Wm. H. Siebrecht, J. Miesem, J. Donaldson, P. Jacobson, A. Donaldson and P. Einsmann of the Astoria Florists' Bowling Club journeyed to Flatbush to bowl the growers of that locality a few friendly games. After being lost in the wilds of Flatbush for some time, the Astoria boys succeeded in reaching the Dailladouse place by locating the Kings Co. Insane Asylum, with which neighborhood some of the Astoria bowlers seemed to be suspiciously familiar. After inspecting the splendid stock of the Dailladouse establishment all hands adjourned to the bowling alleys, where they rolled five games, after which they sat down to an excellent repast, furnished by a local caterer. Louis Schmutz's after dinner speech was the feature of this session. After supper three more games were rolled, and while it was generally conceded that the Astoria bowlers were a little too strong for the local boys their grand hospitality made up the deficiency in that respect. The scores were as follows:

	Astoria	Flatbush
Game 1	\$98	\$39
Game 2	846	875
Game 3	856	770
Game 4	933	906
Game 5	832	750
Game 6	1268	1155
Game 7	1224	1012
Game 8	1180	1110

For the past few years Frank Gall has
been manager of the Century Flower
Shop. His many friends will, no doubt,
be glad to know that H. H. Battles has
recognized his ability, by giving him
charge of Thornhedge Nurseries, succeed-
ing F. S. Jackson.

Godfrey Aschmann, the Araucaria
king, says he will have his houses full
of all kinds of plants for Easter, espe-
cially Lilies and Azaleas.

Aphine Test in Philadelphia

On the afternoon of Feb. 12, in the
new store of the Henry F. Michell Co.,
518 Market st., a public demonstration
of Aphine was given by M. C. Ebel of
the Aphine Manufacturing Co. and Roht.
Shultz of Madison, N. J.

Many huge infested plants and shoots
having on them green fly, Chrysanthem-
um cuttings, and Begonias infested with
black fly, Gardenias having mealy bugs,
Palms with scale, and one plant of Ficus
pandurata badly infested with the Bel-
gian long scale, were sent in by local
gardeners and florists. A mixture of one
part Aphine to 40 parts of water was
made, and all the subjects sprayed.
Within an hour the green and black fly,
mealy bug, etc., had succumbed to the
evident satisfaction of many well-known
men of the trade. The scale, which is
conceded by all florists to be the hardest
pest to get rid of, had begun to show
definitely that the insecticide was doing
effective work in loosening it up, so as
to be easily syringed off with water from
the hose. Mr. Ebel explained that for
badly infested plants, such as on the
demonstration table, twenty-four hours
was necessary to give the mixture a
thorough test. Better results could be

dany at Madison, N. J. This is the third successful public demonstration given, the others taking place recently in New York and Boston, since which time many unsought testimonials have been received, several of which have been published in the company's weekly advertisements in the trade papers. Regarding the killing of white fly, an insect so troublesome on Primulas and such plants, the mixture can be used with certainty; the liquid is free from any chemical which will discolor any flower. As a dip for scale infested Orchid plants it has been shown to be unequalled. The Henry F. Michell Co. are agents for the insecticide.

Chicago

The Orchid Show at Lincoln Park conservatories which has been open to the public the past week, is attracting the attention of Chicago flower lovers. Orchids valued at \$20,000 are on exhibition. A feature this year is the exhibit of 200 varieties of white Orchids, besides an additional 700 species of the more common varieties. The show has been well attended, and is most beautifully arranged. Rudolph Schiele is in charge of the show.

Please mention the Exchange when writing.

Twenty-three small parks in various parts of the city are to be given names shortly. Some already have them, but the commission prefers new ones.

The University Lecture Association will give a course of six lectures, one each Monday at 8 p. m., on plants in their environments. Following is the series: Feb. 14, The Struggle for Existence; Feb. 21, Plant Societies; Feb. 28, Forest Successions; March 7, The Manufacture of Food; March 14, The Role of the Soil; March 21, Plants of Extreme Conditions. The lectures will be delivered by John M. Coulter Ph.D., at Fullerton ave. Presbyterian Church, corner Fullerton ave. and Hamilton Court. Tickets for the course of six lectures are \$1.50, single admission, 35 cents.

Our florist alderman of the twenty-sixth ward was endorsed at a meeting held Feb. 7, by several hundred voters, they advocating his re-election at the coming election.

Randall's are already thinking of President Taft's visit to Chicago on St. Patrick's Day, and have on exhibition what is claimed to be the only real Irish Harp (Dalway's). It is 4½ ft. high and made of green Laurel leaves, with gilded strings. They expect every florist will have a big display of Irish harps for the occasion.

T. G. McNauley, formerly undertaker at 548 Wabash ave., has opened a fine large store at 477 Wabash ave. Mr. McNauley has a very large number of acquaintances who will help him considerably in his new enterprise.

On the completion of the bowling tournament held in Chicago in January last the highest man of all the participating teams was presented with a watch fob. Geo. Asmus and Allie Zech tied for highest score on the team representing the Chicago florists. They bowled for it at their regular meeting on Feb. 10, and Mr. Asmus was the winner.

J. Mueller, representing the Julius Roehrs Co., Rutherford, N. J., spent a week in Chicago, visiting among the growers and florists. He also accompanied the Chicago people on Tuesday morning to Urbana, Ill., to attend the Illinois State Florists' convention. Mr. Mueller is very favorably impressed with Chicago, this being his first visit.

John Zech, while not entirely recov-

ered from his recent bad cold, is on deck this week. Miss Keegan, book-keeper for the firm of Zech & Mann has been home sick for the past week.

At Charles McKellar's are to be found some fine specimens of Cinerarias. Orange blossoms are also obtainable at this place, in fine sprays. Mr. McKellar says he expects to receive shipments of them for the next two months.

The store of J. B. Deamud Co. is headquarters for Pussy Willows, forced in greenhouses. These are meeting with a ready sale for decorative purposes.

Friedman's windows are attractively arranged with a display of suggestions in flowers and plants for St. Valentine's Day. O. J. Friedman returned on Tuesday from a short trip.

A. Lange was unusually busy on St. Valentine's Day, his specially arranged boxes of flowers for the occasion meeting with a very ready sale.

Mangel's window is most effectively arranged, and cannot help but be an attraction to all passers-by. One section is given over to elaborate St. Valentine's Day suggestions.

F. H. Henry, of Henry & Lee, New York, spent several days in Chicago this week.

Visitors: John Fuhlbrugge, Winona, Minn.; Geo. Bartholomew, Miami Floral Co., Dayton, O.; Edward Roehrs, Rutherford, N. J.; Geo. Knhl, Pekin, Ill.; R. R. Davis, Morrison, Ill.; J. H. Newhall, Aurora, Ill.; Mrs. Rott, Joliet, Ill.

Bowling

The Chicago Florists' Bowling League met, as usual, on Thursday, Feb. 10. The Carnation team excelled themselves and are now leading. Following were the scores made:

ROSES

Detroit

Even if the Lenten season has arrived it has not made any material change in the volume of business. The purpose of the larger purchasers may have changed, still a more liberal supply of, so-called, Spring flowers, and the arrival of good potted Hyacinths, Tulips and Azaleas, put great life into the counter trade.

The wholesale growers, generally, declare this season to be a good one. Potted plants as well as cut flowers are disposed of easily at good figures. An excessively long period of dark days kept flowers back, but whatever were offered were of good quality, and that trying period of an oversupply in January was avoided. The steadily increasing shipping trade of the local wholesale houses helps the growers very much indeed.

Advance reports regarding St. Valentine's Day show the usual increase in booked orders, with a great revival of Violet demand.

FRANK DANZER.

Worcester, Mass.

The lecture at Horticultural Hall by Prof. Donald B. McMillan, of the Peary party, was postponed from Feb. 3 to Feb. 5, on which date the hall was taxed to its full capacity of more than 800. The lecture was a most interesting one, but as one touching the flora of the Arctic region it was a decided disappointment. Only one picture was shown on the canvas pertaining to this subject.

A. A. Hixon, the genial secretary of the Horticultural Society, is able to be at the hall during the day, but has not been there nights since last October. The clerical work is attended to by Miss Lucy Cousin.

The will of the late H. F. A. Lange has been admitted to probate. Mrs. Lange has come to an understanding with the two sons of Mr. Lange and as far as the public is concerned the matter is at rest.

CAROLUS.

WINCHESTER, MASS.—The greenhouses of the late George Milne on Lincoln st. are to be conducted by his wife.

Plant Culture

By GEO. W. OLIVER.

Propagator to the Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C.

New, revised and enlarged edition, fully illustrated, handsomely printed on enameled paper and bound in Vellum de Luxe cloth, 12 mo., 300 pages. Sample pages on application. Write to American book by an American author.

The Book of Books for the Grower. Compact, concise, practical, containing all the information bearing on present day practice. You need it for yourself, for your foreman, for your men.

SPECIAL OFFER

Meriden, Conn.Meriden, known as "Silver City" from
its silver manfactories, has some 32,000
population and, on its main street, are
two retail florist stores. Trade here is
very brisk, especially so in design work
and some excellent business is reported.
Recent orders were trolley cars, fire
trucks, mail box and fire alarm boxes,
all of which are somewhat out of the
ordinary.Mrs. R. W. Barrow has a store at 40
W. Main st. and about 10,000 sq. ft.
at 37 New st. The store has been here
for past eight years and last Christmas
was best in the 14 years she has been
in the trade. Considerable funeral work
is coming in and a large number of pot-
ted plants are sold for funerals; this is
somewhat of a departure and is becoming
very popular.

and Stones Corner, Milldale, have
some 12,000 ft. of glass devoted to re-
tail and wholesale trade. Mr. Blatch-
ley came here from Southington, Conn.,
where he was a grower for the past 25
years. The store is nicely situated and
trade is, and has been, excellent since
last Fall.Wm. Woodley, 28 Silver st., has some
5000 ft. in cut stock, Ferns and Palms,
and decorative work in these is excel-
lent. Mr. Woodley has been in the busi-
ness for past 17 years and never saw a
better holiday trade than the past Christ-
mas.Jos. A. Greenbacker of Old Colony
road has an excellent location opposite
the Cemetery and reports good funeral
trade. He has about 10,000 sq. ft. de-
voted to Carnations and bedding stock
and recently received a diploma for de-
sign making at a fair held in Berlin,
Conn.**The
Week's Work**BY
FRITZ BAHR**Carnations****The Care of the Rooted Cuttings**

If there is one thing of more importance
than another when potting the
rooted Carnation cuttings, I would say it
is the soil; especially does this hold
good with cuttings which have traveled
a long way. To pot these and use a
heavily manured soil is wrong. The
beginner is only too apt, in order to do
things right, to make this mistake. A
rooted cutting after having been packed
for several days needs the very best of
care until properly established, and a
sandy loam, or other light soil contain-
ing but little or no manure, is the prop-
er thing. For such cuttings I like to
use a smaller pot than 2 or 2½ inches,
and prefer to give a shift as soon as
the little plants are showing root
growth, using for this a soil which con-
tains manure. It may seem to some
that this only means extra labor, and
that they had good results without
going to all this trouble; and yet, many
cases of disease and weakly plants are
traceable to improper care of the
rooted cuttings, and there is the great-
est difference between the ones which
have been shipped and those rooted at
home; but both need nursing until the
little roots are getting into the soil, and
shading is in order. A thorough soak-
ing after potting will do for several
days. For the first three or four days
a light spraying in the morning, before
the shade is applied, and another
spraying in the afternoon after the
shade is removed, will prevent the
young stock from wilting. Keep the
soil moderately moist, not soaking wet
nor too dry for either is wrong.

Cut Flowers for the Summer Months**Timely Suggestions**

There couldn't possibly be a more
appropriate time than the present for
many of us to make plans for the next
eight months to come, in regard to the
supply of cut flowers. There used to be
a time, and that not so very long ago,
when many out-of-town florists had
little or no call for anything in the cut
flower line during June, July and Aug-
ust. Many a small grower would
dread that time, and look forward to
the first frost to finish the Asters and
Nasturtiums, but great changes have
taken place. We need a proper supply
of flowers every day of the year, and
well grown stock brings a higher price
than ever. It is a fact that the mar-
kets of the large cities are at most
time during the Summer months
overstocked with outdoor grown flow-
ers; and not alone are these flowers
supplied by florists, but by amateurs, as
is the case in Chicago, where a few
miles north of that city in one village
of about 200 inhabitants 19 farmers,
last season, grew and shipped Sweet
Peas to the wholesale market of Chi-
cago; yet extra good stock brought a
fair price, and with all the quantities
of Asters available, 3c., 4c. and even 5c.
were paid for fancy flowers. Things
haven't changed in that respect one
particle. The man who can produce
something that is just a little better
than the average, will get the extra
money. There is a bigger demand for
this class of stock than ever before;
there is no over production in that line.
Great strides have been made of late
years in bringing out and introducing
hardy perennials especially suitable for
cut flowers. Men have brought certain
plants, which were almost forgotten to
the front, as well as improved others,
and added new varieties. This also
holds good with shrubs; the retail
grower finds most useful material
among them, and the writer, as well as
many others, has found the growing of
such most profitable; for that reason I

call the attention of those who have not as yet entered into this branch of the business to it, and suggest that they get busy—there is no resting nor sitting still, even during the Summer months; keep on hammering.

Shrubs
Those of Value for Cut Flowers
For those who have the room, the planting of hardy flowering shrubs is a paying proposition. While there is not a great variety of flowering ones, among the better known sorts, which are really ideal for cut flower purposes, yet there are some which are most desirable, and the best of it all is that these showy plants really improve in value for years if any attention is paid to them at all. Every florist should have on his grounds a good number of hardy Hydrangeas. I don't know of another shrub quite as useful as this one for the florist; but how many places are without them. Fine strong plants are offered by our nurseries, with 4 foot canes well branched, at from \$10 to \$12 per 100. You couldn't plant anything that will bring better returns. Now is the time to order a supply, to be shipped about the end of March. The sooner the plants are planted the better after that date. Don't make the mistake of letting the long canes remain on the plants—this would result in a number of small growths and small flowers. You want large flowers on a 3 to 4 foot stem. This necessitates pruning back to about 5 inches of the last years growth of the plants. Among the other hardy shrubs suitable for cut flowers I might mention the following: Deutzias, Forsythias, Lilacs, Loniceras, Philadelphia, Fraxinus triflora, Spiraea Van Houttei, as well as quite a few of the other Spiraeas, including Thunbergii, Lindleyana and Anthony Waterer; the Snowballs, and Weigelas. The retail grower has use for everyone of the above; they are all showy and useful, even if most of them bloom early in the season. Plant enough of them. The nurseries supply them at most reasonable prices, and most of them can be used for forcing, which means the potting up of the field grown plants in Fall and a house of about 55° from February on. Any not sold can be planted out again. For forcing, the Deutzia gracilis and Spiraea Van Houttei are especially fine.

Hardy Perennial Plants
Suitable for Cut Flowers
Among these the Poonies and Phloxes play, maybe, the most important parts as cut flowers with the florist. While the Poonies are of the greatest value to us, many of the newer sorts of the Phloxes form splendid material as cut flowers during the latter part of the Summer. They should certainly not be overlooked if a list is to be made up. A long list could be given of perennials suitable for cut flowers outside of the above two, all good; the average florist never realized their value yet, but more of them will be grown right along, and the sooner we get to it the better. Create a demand for something besides Sweet Peas and Asters, something a little out of the ordinary. The public is ready for it; never before has it been more willing to pay for it. Looking over the long list of hardy plants the few following will all be found worthy a trial; they only form a small part of the list, but appeal to the beginner as especially valuable: Chrysanthemum maximum; Anemone; Japonica; Queen Charlotte; Achillea; Hardy Asters; Eolonia; Gypsophylla; Hardy Sunflowers; Japanese and German Iris; Garden Pinks; Delphiniums; Gaillardias; Pyrethrum; Rudbeckia; Tritoma; Shasta Daisies and Yuccas. Every one of these is hardy, with the exception of the Tritomas, which ought to be lifted in Fall.

The Planting of Hardy Stock
The Retail Grower Should have a Show Border
As regards planting shrubs and perennials a few words may be helpful. I always claim that it should never be taken into consideration, where these plants are to be planted, whether the place is located to full public view or not. Make it effective. There are no iron bound rules to be obeyed, outside of to do the planting in a way which will give each sort a fair show; to allow proper cultivation and arrange for color effect and harmony, as well as give each class a proper place, so as not to have a low growing variety behind some tall sort. Whenever large amounts of each variety are grown, straight nursery rows are the proper thing, but the smaller retail grower, the one who has a chance to plant near his place of business, should at least set a part aside for an irregular border, in which the shrubs and tall growing varieties of perennials form a background, and the grouping is done in a way to give the best possible effect throughout the season. This will require a little planning ahead. Whenever space permits, borders of this kind can be carried out so as to hold many

hundreds of plants, from which can be cut flowers every day from May until the end of October. A border of this kind should be found at every florist's place—you cannot have a better advertisement. By starting in on a small scale and adding each Fall or Spring, as well as making such changes as will help to increase the effectiveness of the border, the grower will be most agreeably surprised at the volume of business which he can do in not alone selling cut flowers but, what is even more profitable, in disposing of shrubs and perennials. Now is the time to make plans as to what is to be done in these lines for the coming season. It isn't a bit too early, but, as we all are getting busier with each coming day from now on, nothing is gained by putting it off—it is too important.

Columbus, O.
The long continued cold and cloudy weather has caused considerable complaint of scarcity of good stock in many lines. One exception, however, has been in Carnations, which have, at times, been offered by some local dealers at real popular prices, 50 cents per dozen and under.
The settlement of the Helleenthal estate, recently completed, showed affairs to be in good shape, the real and personal property amounting to something over \$16,000. The business will be continued along the same lines by the family.
Mrs. F. Griswold of Worthington had two bad falls recently, each time dislocating, or severely straining one of her wrists. She is now reported as slowly improving.
Local florists were not a little exercised by a recent action of the Columbus Board of Education in placing a ban on floral offerings for the fair graduates of the Normal school.
The entertainment committee of the Florists' Club did the handsome thing last week by getting up a club social, to which the members and many of their friends, and especially the ladies, were invited. Music, dancing and light refreshments helped to make a pleasant time for all.

LIGHTNESS
If greenhouse lightness be obtained at the expense of structural strength, then your house is a danger trap; if your house is so heavy it shuts out the light, your crop is inferior. You must have a "happy medium," combining sufficient strength, and securing the necessary lightness.
The construction that more than meets these requirements is our Iron Frame One. Send for information.

We have had an extremely cold spell,
and at present writing there is a change
for the better, with much warmer wea-
ther and bright sunshine that we have
long looked for. Trade conditions have
been satisfactory, especially in funeral
designs. St. Valentine's Day called for
many cut flowers of all descriptions, and
many box orders resulted.

Lincoln's Birthday was well observed,
many banquets and parties being held,
using many cut flowers and decorations.

Albert G. Fiedler & Co. have a taste-
fully arranged St. Valentine's Day win-
dow display that has attracted a large
crowd; at times the pavement was
crowded to the curb. At one end was a
large heart with Cupid sitting backed
up with Palms and Ferns and many
vases of Enchantress Carnations. The
ground plan was of solid greens and the
sides and ceiling were draped with South-
ern Smilax. A large number of red
hearts hung from the ceiling, with elec-
tric lights. Taken all together, the
makeup was first class.

E. A. Seidewitz, N. Charles st., made
quite a hit on St. Valentine's Day with
his large window display, made up of
many choice, seasonable cut flowers, in
boxes arranged in a tasteful way. The
background consisted of various kinds of
decorative plants. Quite a large number
of people viewed the display.

Samuel Feast & Sons also had a beau-
tiful window of Spring blooming plants
and cut flowers. Nearly all the retail
florists did their best for the St. Valen-
tine's Day occasion.

The Market

Stock of all kinds in the market
seems to be enough to meet the demands.
Roses are not so plentiful. Carnations
are at present a glut, selling at extreme-
ly close prices, but none are going to
waste. The street fakirs are doing a
good business, and the market florists are
feeling the effects. Lily of the Valley
is coming in steadily, and beautiful Sweet
Peas find ready sale. Callas are not so
plentiful. Bulbous stock of all kinds is
abundant, and moves well. Southern
Smilax is still in demand. Greens of all
kinds are coming in better since the
open weather is here. Pot plants still
find a demand and bring good prices.

J. L. T.

Parcel Post Easily Tried

No one has attempted to reply to the
real arguments for parcel post. Here
are 40,000 men and teams carrying loads
over the rural mail routes which a good-
sized dog could handle. All along these
routes are men and women eager to take
purchases or send packages by mail.
With a fair postage rate they would fill
those empty wagons and buy stamps
enough to make the rural mail service
pay and wipe out the postal deficit.
There is the whole thing, and nothing
could be simpler. Yet Congress will not
even give us a change to demonstrate
it. There is only one thing to do—get
a new Congress.—*Rural New Yorker.*

Baltimore**Club Meeting**

The regular meeting of the Gar-
deners and Florists' Club was held on
Monday night last, with President J. J.
Perry in the chair. Being Carnation
night a record-breaking crowd was on
hand and a great time was had, business
keeping the Club in session until a late
hour. Many gardeners from the coun-
try were there, and all were well sat-
isfied. Three new members were enrolled.
Proposals for membership included the
following names: Albert Beckman, Gar-
denville, Md.; J. J. Blair; R. Calvert.

A letter from the Chicago Carnation
Co. was read by Secretary N. F. Flin-
ton, also a letter from the Cottage Gar-
dens, Queens, N. Y., advising the
despatch of Carnations for exhibition,
but up to a late hour the latter concern's
were not received and a great disappoint-
ment was felt.

Hy. Eichholz of Waynesboro, Pa.,
made a cracker-jack speech that was in-
teresting to all, and evoked hearty ap-
plause. At the first meeting in March
election of officers will take place. The
meeting will commence one hour earlier
than usual, 7 o'clock. The regular
meeting will be held, and upon adjourn-
ment the members will proceed to the
banquet, to be held at Schneider's Cafe,
where many speeches will be heard and a
lively time will be had. The Car-
nation committee made its report. The
Club awarded a certificate of merit to
Washington and Princess Charming Car-
nations. R. Vincent, Jr. spoke on the
Summer horticultural meeting to be held
at Harrison's Nurseries and Ocean City,
and the Washington florists will join the
local florists and help to make it a suc-
cess. The following were the exhibits:

James Hamilton, Mt. Washington, vases
of Winsor, Enchantress, White Perfec-

Tubular Boilers Steam and Water

The Most Economical and Efficient Boiler for Greenhouse Heating

CENTRALIZE YOUR HEATING PLANT

The economy in heating large ranges of glass from a central plant is so great that the first cost is repaid in a few years.

Following are a few plants which we designed and installed:

THOMAS YOUNG, JR.
BOUND BROOK, N. J.
150,000 sq. ft. glass heated by steam from a central plant; the exhaust from pumps is passed through a condenser which heats 2-150 foot propagating houses with hot water.

F. R. PIERSON CO.
SCARBOROUGH-ON-HUDSON, N. Y.
150,000 sq. ft. glass heated by steam from a central plant; the steam is passed through condensers and the hot water is forced through the houses with circulators.

JOHN N. MAY
SUMMIT, N. J.
75,000 sq. ft. glass heated by steam from a central plant.

Los Angeles

The second annual itinerary of the agricultural and horticultural demonstration train of the Southern Pacific R. R. Co. left Los Angeles on Feb. 8, at 10:30 a.m. The first stop was made at Duarte, 17 miles out, the next at Monrovia, and closed the day's exhibitions at Arcadia. A stop of two hours is made at each place, that those who are interested in animal industries, veterinary science, poultry, cereals, fertilizers, plant diseases, entomology, horticulture, viticulture, irrigation, pure food, and home economics may have time to view the exhibits in these various lines of human endeavor in agriculture. The train of five coaches for the exhibits, a dining car and drawing room Pullman is provided, free of cost, by the company for the agricultural department of our State University, which supplies the exhibits and the demonstrators, or lecturers, which is the better word to express the idea and purpose of the journey. This trip is scheduled for eleven days time, and covers a distance of 575 miles; it is in charge of F. C. Lathrop, commercial agent of the company. The insect pests that prey upon vegetation are shown, and the insecticides, with the implements used to apply them, are exhibited. Every conceivable detail in connection with growing fruit, grain and vegetables is illustrated in a way that compels any intelligent agriculturist to see at a glance any improvement on methods in practice in his own line of work. The journey will take the train through the new county of Imperial, part of which is 264 feet below sea level, and contains 4000 square miles of territory, so young in growth that its possibilities from an agricultural point of view are as yet unknown. Last year 1500 hales of Cotton were successfully grown there, and that, too, without any evidence of the boll worm, the terror of the Cotton grower of the southern States. The object of our University authorities in making these journeys is to create and foster an interest in agriculture, and all that pertains thereto, among the inhabitants of this State, and the railroad company, at great expense, provides this school on wheels with the hope of reward in increased tonnage of freight and increased passenger traffic. Certainly, this is looking into the future a long way—"Casting bread upon the waters to be gathered many days hence."

The report of the horticultural commissioner of Fresno Co., the home of the Smyrna Fig and raisin industry of the State, for January is that 15,000 trees shipped into the county were destroyed, 500 of which were affected with "root knot." The total number of vines sent in was 700,000. For the benefit of eastern nurserymen, readers of these notes. I wish to say of Peach trees whose roots have even the sign of a borer, don't send them to this State on orders from our nurserymen—they are sure to be detected and destroyed. Take no chances on any tree, vine, or plant of any kind not absolutely free from insect pests, or any disease whatever if you wish to guard against loss of freight charges and of the stock as well. Our laws are so stringent that a nurseryman is obliged to notify the horticultural commissioner, or his deputy, of every invoice he receives, and before he gets possession of it every tree is inspected; the condemned

ones go to the brush pile at once and to make the destruction as complete and expeditious as possible coal oil or distillate is poured on and a match applied. Sometimes these officials lack good common sense, and subject us to great and unnecessary annoyances in their zeal, and official authority, nevertheless, as a rule, the law works no hardship on any grower who cares to produce clean healthy stock. The Olive crop of San Diego Co. is heavy, and not seriously damaged by the frosts of the season. The growers are receiving good prices for it.

I had a new and unpleasant experience from tasting the milky sap of Euphorbia corollifera. As is well known, the entire family is possessed of toxic principles of greater or less violence, but the influence of the juice of this one was so rapid and debilitating that in twenty minutes I was reduced to a state of physical collapse which lasted for a half to three-quarters of an hour. I shall make some experiments on rats and gophers, to determine what the effect will be by administering a drop or two to the subject. Three years ago in this town a school teacher took her class out for a picnic one afternoon, some of the members of which ate Castor Beans, with fatal results. The Castor Bean grows to be a good-sized tree here if given an opportunity. These statements are made for the benefit of those lacking in the knowledge of this form of plant life.

My experiment with Figs has demonstrated beyond a shadow of doubt that they can be successfully grown in bush form in sections of the country where the tree will not endure the Winters; this, of course, should be understood for family use only. They will be no more trouble to care for than a mound of Potatoes, indeed not as much, for the reason that a slight freeze will not injure the Fig, but will damage the Potato. Try it, you who live in the southern States or even in Delaware and southern New Jersey. [The very first frost of the Fall killed my bush Figs; I am in New Jersey, 15 miles north of City Hall, N. Y.—Ed.] P. D. BARNHART.

Milwaukee

With the beginning of Lent business is falling off some, and supply has increased considerably, which has caused quite a drop in prices, especially on colored stock. Carnations came in quite plentiful and prices have dropped down to \$1 to \$2 per 100. Roses, likewise, which have been scarce all Winter, are coming in now in quantities to meet all demands. Long American Beauty are about the only short item in the market. Violets are coming in in considerable quantity and there was a very heavy demand for them for St. Valentine's Day, as well as for other small flowers, like Lily of the Valley, Sweet Peas and Forget-me-nots. There is also a heavy cut of Lilies coming in daily, and other bulbous stock such as Tulips, Hyacinths and Daffodils, in just about sufficient quantity to meet present demands.

Some growers report that their Lilies are very late, and owing to the earliness of Easter this year there will probably not be a surplus of Lily plants on the market. However, if the weather remains fair and bright there will probably be enough to cover all orders.

Interior of Danker the Florist's Pipe Frame House, at Albany, N. Y.

THAT PIPE FRAME HOUSE OF OURS

WE used to call it the Semi-Iron House, but improved as it is now, we saw that it was more than a Semi-Iron house and that the name belittled it. The new name also more nearly describes the kind of framing.

Next to our Sectional Iron Frame Construction, this Pipe Frame house is the best house for the money, on the market.

See what you get—Wrought Iron Posts at the sides, which are secured to our patented Ice-Clearing Eave Plate by a specially strong fitting. The plate is equipped with Sash Bar Clasps which grip the bars securely, and carry off the drip, protecting them from end rot.

The Pipe Purlins, tied together by our column fittings, make that famous Giant Arch which supports the roof, and stiffens the entire frame work lengthwise, endwise and crosswise.

Then there are minor details, like the wrought iron brackets which support and secure the roof bars to the ridge; the purlin end bracket which is bolted to the gable rafters and clamped to the purlins, securely tying the gables together; and so on, each thing doing its part to make our Pipe Frame House, the superior house it is.

If you want a light, rigid, enduring house that's worth dollar for dollar, every dollar you put into it—then here's the house for you.

Send for detailed information.

This shows the way the Clamp Column Fittings are used to make the Giant Arch, also how the Purlin Bracket is bolted through the gable rafter.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 9

NEW YORK AND CHICAGO, FEBRUARY 26, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the prices quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of Elegantissima has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8 in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. pans, \$12.00 per dozen.

CHICAGO.—The Red Clover and Timothy seed market was nervous; both staples were shaded in price last week.

European Notes

Where on earth does the rain comes from? That, Mr. Editor, is the question on everybody's lips at the present time, for the one really and completely dry day for which we have been longing since the year began is, apparently, not forthcoming. Everything in soil or stackyard is completely sodden and, already, growers who cannot work their land are backing out of contracts for which the stock seed must be sown very early in the year with any prospect of success.

Bloomsdale and prickly seeded Spinach come under this category and, as the growers are obdurate, the outlook is not encouraging.

It is reported that the Dutch dealers are also in a rather difficult position with regard to this article, partly because

of the success which has attended the culture of bulbs on land hitherto sacred to Spinach growing, but more by reason of the increased price which is offered by the sugar manufacturers for Sugar Beets: this latter is just now one of the most profitable crops the farmer can grow: it is also a permanent benefit to the land.

Over in England the same conditions are likely to arise, as it is reported that the company recently advertised, for the manufacture of sugar in Lincolnshire, has obtained sufficient support to make a start forthwith. This will to a great extent affect the Potato crops at first, but if the venture is a financial success many other factories will be started and the land now monopolized by Mustard and Turnip will be used for the more profitable crop.

The abatement of the floods in Paris has enabled us to obtain more accurate information respecting the losses sustained than was possible through the agency of the sensational press. While an immense amount of damage has been done it is pleasant to find the most important Paris firms are able to report (doubtless as the result of wise and energetic precautionary measures) that "the real damage sustained is only very trifling." In the meantime the Rivers Seine and Loire are rising again.

EUROPEAN SEEDS.

New York Seed Trade

The past week has been a very busy one with every seed house here. Washington's Birthday was taken advantage of by several firms to straighten out the mass of orders already received; a few of the seedsmen closed all day religiously, as usual. We are still having most disagreeable, foggy and rainy weather, but without any more snow. The seed selling season has opened with a rush, and night work is already general with all.

Weeber & Don are doing much more than usual in the grass seed line. Among recent orders received by this firm was one from the Chevy-Chase Golf Club of Washington, D. C., for several thousand pounds of golf course grasses.

The large and unprecedented call for seed catalogs is a sure omen of an early season, anyway in so far as seed selling is concerned.

W. Atlee Burpee of Philadelphia was among our recent visitors. Mr. Burpee is sure the opening season will turn out to be fully as satisfactory as all seedsmen expect, although the seed shortages in many directions must cause much disappointment among customers, and before very long. The early buyers this year are the wise ones.

At Vaughan's Seed Store a very attractive window display is in order this week. Spring bulbs being its chief feature. The store force is now working every night, so heavy have the orders already begun to come in.

McHutchison & Co. report a very large demand from the seed trade at the present time for Raffia.

Bridgeman's Seed Warehouse—Rickards Brothers—is handling large quantities of Thompson's Vine Manure.

The Stump & Walter Co. is this season making a specialty of supplying dealers with assortments of vegetable seeds for retailing. These seeds are put up in most attractive lithographed bags and are packed in a novel display arrangement in the shape of a Ferris wheel, which is strongly and handsomely made, making an ornament to the counter bound to draw special attention to the seeds. The seeds themselves are of identically the same quality this house furnishes to the market gardener trade.

W. Elliott & Sons are in receipt of their first consignment for auction, 15 cases of Roses, conifers, etc. The first auction will be held March 15.

SEED PANSIES PLANTS
or the
oz. or lb. 150,000

The Jennings Strain, fine field-grown plants, large-flowering, in great variety of fancy colors. Strong plants for cold frames, \$3.00 per 1000, by express, 60c. per 100 by mail.

PANSY SEED, finest mixed, \$6.00 per oz., \$1.00 per pck. of 400 seeds. Sample of Pansy blooms by mail free.

American Notes

The Rush Has Started

The real rush of seed selling for the season of 1910 has started in earnest; it always does about Washington's Birthday, but this year it has certainly shown an opening momentum not experienced in a long time. Many of the larger firms have already been working evenings, and from now on there will be no let-up until practically the last of May. It is going to be, as all along expected, one of the best seasons the seed trade has experienced in a very long time. Of course, the extreme shortages of so many items in standard seeds will be very annoying as the season advances; in fact, already several seedsmen are cutting down the quantities ordered by their customers in the scarce things to half and even one-quarter part of the amounts requested. It is surely very early in the season to begin returning money, but just as surely only justice to treat all regular customers alike, and fill each order in the same relative proportion. From practically every section of the country come reports that never before has there been such an early and large call for seed catalogs; this is one of the sure signs of a great season, as every extra order that can be filled before the middle of March is a great help; after that time one year varies little from another. From March 15 until the end of the season seeds disposed of are only limited by the capacity to fill orders.

Advertised "Surplus Stocks"

The following communication from one of the most reliable and respected former members of the seed trade is so much "to the point" just at this time, that it is here given as received: "In this year of acknowledged short crop of seeds the world over, how are we to account for the number of lists headed 'Surplus Stocks' being scattered among the dealers in seeds at present. It seems to me the word 'surplus,' as so used, is a very unfair word, from one dealer in seeds to another. According to Webster, a surplus means 'that which remains when use is satisfied—excess beyond what is prescribed or wanted—overplus.' Now does this 'surplus' exist this season? If it does exist, what is it? By what channels does it reach the trade now? Will such 'surplus lists' cause one pound of seeds more to be added to the season's sales? Such lists bring a depreciation of values in the goods for sale in legitimate trade. It is unkind to the trade, uncalled for, cloudy, both as to the stocks and the parties who so offer them. If these 'surplus merchants' would carefully read St. Paul's Epistle to the Ephesians I think they would not act as they do."

How true and to the point these remarks are. Only this very week, one of the prominent Eastern seedsmen returned over \$100 to a customer who had ordered more Cabbage seed of a certain variety than it was fair to send him, when the needs and rights to be supplied of this firm's other buyers were considered. The firm who returned this money could have bought plenty of the Cabbage seed in question from one of the many "Surplus Lists" with which the country is always flooded, in a year of seed shortages es-

FLOWER SEEDS

SALVIA SPLENDENS

	¼ oz.	Oz.
Grandiflora	\$0.25	\$1.60
The best tall Salvia in the market.		
Compacta	.40	2.50
Bonfire	.40	2.50
Hardly any foliage, but masses of flowers.		
Lord Fauntleroy, very dwarf.	.76	4.00
Maroon Prince, deep maroon.	.76	5.00
Fire Ball, most intensely colored.	.76	6.00
Silver Spot, leaves spotted, very attractive.	.26	1.60
Zurich. The best Salvia yet introduced. Plants grow very compact, show little foliage and bear heavy flower spikes, which are thickly laden with bright scarlet flowers. Flowers early in July and remain in bloom with water varieties. ¼ oz. 75c., oz. \$3.00.		
Patens. (Blue Salvia). 1-16 oz. \$1.00.		
Salvia Splendens. King of Carpets. The best dwarf bedding Salvia on the market today, out rivaling even 'Zurich'.		
The plants branch from the bottom and to such extent that the main stem is never visible. All side branches drop completely to the ground, making the whole plant a perfect half ball of fire. The plant grows but 18 inches high and flowers even earlier than 'Zurich.' ¼ oz. \$1.00, oz. \$6.00.		
The 'Zurich' Salvia grower, Mr. F. Bedman, says: 'About GLANT. This strain 'Carpet.' It has done very well considering the dry weather that we have had, and I consider it one of the grandest dwarf salvias that I ever saw.'		

AGERATUM

	¼ oz.	Oz.
Extensively raised as a pot plant and used for edging.		
Laesaeux	.40	20c. \$0.50
Mexicanum	.16	
Athum. Large flowering white	.26	
Blue Perfection	.30	
Dwarf Imperial White	.26	
Dwarf Imperial Blue	.30	
Dwarf Swauley Blue	.30	
Dwarf Little Dorritt	.26	
Dwarf Little Blue Star, 1-16 oz. 75c.		

ANTIRRHINUM

	¼ oz.	Oz.
A most valuable plant for the cut flower market, easily grown and very profitable; we have been careful to select but such colors as are ready sellers.		
RAWSON'S TALL GLANT. This strain grows three to four feet high and is covered about two-thirds with gigantic flowers of grace and beauty. ¼ oz. \$0.40.		
Finest Mixed	.26	
White	.20	.60
Scarlet	.20	.60
Yellow	.20	.60
Pink Rose	.20	.60
Delicate Pink	.20	.60
Coral Red	.26	.76

ASTERS

	¼ oz.	Oz.
Rawson's New Midsummer Aster		
The colors are true and hardly any open-centered flowers among them.		
Pure White	\$0.60	\$2.00
Delicate Shell Pink	.60	2.00
Delicate Purple	.60	2.00
Trus Lavender	.60	2.00
Bright Rose	.60	2.00
Finest Mixed	.50	1.50
Aster, Rawson's Life Branching. Flowers are very large in size and borne on long, stiff stems. It is one of the best and most popular varieties for late flower markets.		
Finest Mixed	\$0.25	\$0.76
Crimson	.30	1.00
Dark Blue	.30	1.00
Light Blue	.30	1.00
Rose Pink	.30	1.00
Shell Pink	.30	1.00
Scarlet	.30	1.00
White	.30	1.00
Dawn of Day. (Novelty, 1908). The earliest flowering Aster in existence. Fine white, perfect in form and growth, long branching stems and flowers; often three weeks ahead of Queen of the Market. It is of branching habit and very full and if freely cut will continue to bear blooms until late in Fall. ¼ oz. 60c., oz. \$2.00.		
Rawson's Daybreak. This variety must not be compared with the strain offered elsewhere and a trial will convince the ever-so-critical of its superiority. ¼ oz. 40c., oz. \$2.60.		
Rawson's Purity. (Pure white.) Of the same type as Daybreak, differing only in color, which is a pure glistening white. Just as free-growing and symmetrical as Daybreak and undoubtedly unsurpassed as a white bedding variety. ¼ oz. 50c., oz. \$3.00.		
Rawson's Queen of the Market Aster. The best early Aster for the Florist, quality being very much improved.		
Finest Mixed, ¼ oz. 15c., oz. 50c.		
Crimson, Dark Blue, Light Blue, Rose, Peach Blossom, White. ¼ oz. 20c., oz. 60c.		

February 26, 1910

Burpee's "Gold Medal" Exhibit in the R.H.S. Hall, London, July 23, 1909

The only Gold Medal of the National Sweet Pea Society ever won by any growers outside of Great Britain was awarded to the American firm of Burpee, at the great exhibition in London, July 23, '09

An immense amount of interest was taken in the very fine display made by Messrs. W. Atlee Burpee & Co., Philadelphia, America. The name suffices as a guarantee of excellence, and we can truly add that the excellence of the flowers staged was such as to uphold the fame of the American Sweet Pea specialists.—From THE GARDENERS' MAGAZINE, London, England, July 31, 1909.

Sweet Peas Up-to-Date

With the increasing popularity of Sweet Peas has come a demand for complete "Up-to-Date" cultural directions and lists of varieties.

In 1897 we published, under the same title, a book on Sweet Peas which had a tremendous sale. Realizing that with the advent of the "Spencer," "Unwin" and Early-flowering types discriminating planters should have the benefit of "Up-to-Date" methods and lists, we began more than two years ago to gather information that would prove of the greatest value and at FORTHROOK FARMS judged varieties, if possible, more closely than ever.

SWEET PEAS UP-TO-DATE is a book of 80 pages, which will prove of real value to the novice, amateur and professional grower.

Among the subjects clearly handled under separate titles or chapters are: Soil and Preparation, Sowing and Planting, Sowing Out of Doors, Staking and Trellising, Cultivation, Manuring and Watering, Winter-Blooming Sweet Peas, Insect Pests and Blight, The Spencer Type of Sweet Peas, List of "Spencer" Sweet Peas, Unwin Type of Sweet Peas, General List of Sweet Peas, Varieties for Truckers and Market Gardeners, Exhibiting Sweet Peas, Sweet Peas for Table and other Decorations, Trellises.

Sweet Peas Up-to-Date is published at the nominal price of 10 cts. (or 3 copies for 25 cts.), so as to bring it within reach of all.

NEW "SPENCER" SWEET PEA—Miriam Beaver. From a photograph, see Colored Plate and description in Retail Catalog.

Burpee's "Re-Selected" Gigantic "Orchid-Flowered" SWEET PEAS of the True "Spencer" Type

Because of such enormous size, of waved or fluted appearance and charming blendings of harmonious colors, this New TYPE can only be appropriately described as Truly Gigantic "Orchid-flowered." The flowers are not only of extremely large size, but are distinct in having the outer edges of the standard and wings beautifully crumpled or waved; the tissue being so full that there is not room for it to lie flatly expanded or smoothly rolled. The standard is broad and tall; the wings are broad, well spread and held erect by the keel.

We were the first to grow the original *Countess Spencer* (prior to its introduction) in America. By reason of its "sportive character" it has required years of labor to perfect the original "Countess"—but this same tendency "to break" has resulted in giving us a number of colors which already come reasonably true from seed and which will delight every lover of Sweet Peas who can afford to buy them.

Caution While most profuse in flowering, they are very shy seeders and the true "Spencer" type can never be produced cheaply. You can buy so-called Spencer Sweet Peas at one-half to one-fourth our prices, but such "cheap seed" can not be intelligently and carefully grown from the purest Re-selected Stocks such as ours and will result only in disappointment. See quotation below:

It is well known that the "Spencer" varieties of Sweet Peas do not seed nearly as freely as those of the old type. It would not be an exaggeration to say that some of the choicest "Spencers" do not yield a tenth of what the old varieties did, and this in a favorable season.—From the Gardeners' Chronicle, London, England, September 11, 1909.

W. ATLEE BURPEE & CO., Burpee Building, Philadelphia

Please mention the Exchange when writing.

BURPEE'S KING EDWARD SPENCER comes true from seed, and the magnificent flowers are generally sunproof. This is undoubtedly the largest and best Scarlet Sweet Pea yet developed.

A spray of Burpee's "King Edward" Spencer. Exactly natural size.

43 In ordering, please state whether you want also a copy of BURPEE'S ANNUAL FOR 1910, an elegant book of 178 pages and a trustworthy Guide, which has been long and favorably known as "The Leading American Seed Catalog." Every Florist and Market Gardener who is willing to pay a fair price for the Best Seeds it is possible to produce should consult BURPEE'S BLUE LIST FOR 1910, which will be mailed also—if you mention The Florists' Exchange. This BLUE LIST is never sent to Private Planters, even if asked for.

Burnett's New Tomato "Liberty"

This illustration is a Direct Reproduction from Nature

A Wonderful and Striking Novelty

Tomato Liberty, introduced by us two years ago, holds undisputed reputation as the best main crop variety in cultivation. It was largely grown last year by many competent private gardeners throughout the country, who claim it to be one of the finest novelties ever offered. It is an exceedingly heavy cropper and bears abundantly until very late in the season. The fruit is of a glossy red color, of immense size, perfectly round, uniform in shape, solid and meaty; of superb quality, with few seeds and borne in clusters of from 8 to 19 large Tomatoes. Liberty has won prizes and certificates of merit wherever shown and will be found the leading variety for exhibition purposes. All our patrons who have grown Liberty claim it to be entirely distinct and far superior to all other sorts.

Burnett's New Cabbage "Bass Rock"

As a second early variety this Cabbage has no equal. It matures a few days later than Early Summer, is much larger and a sure header. For quality and evenness in size it is, without doubt, the finest of the flat headed type grown either for Summer or Winter use, being absolutely perfect in every respect.

Burnett's Special Lawn Grass Mixture

The above mixture is made from our own formula, and composed of grasses specially adapted for the purpose of producing turf which retains its rich green color and velvety appearance throughout the entire Summer and Fall. In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable dwarf evergreen, *reclined*, grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn.

Catalogues on Application

BURNETT BROTHERS

SEEDSMEN

72 Cortlandt Street, New York

Please mention the Exchange when writing.

pecially. The facts are, that "Surplus Lists" are not taken very seriously by well-posted seedsmen. Briefly, another case this season, along this same line, occurred as follows: A grower of Onion seed, on contracts, filled his customer's orders on a basis of 50 per centum, and then the same grower issued a "Surplus List" offering the very same variety of Onion seed. Such are some of the disturbing factor that the better class of seedsmen have to contend with. In a future note the writer will speak of this matter again.

Danish Ball-Head Cabbage

It is, of course, a number of years now since this Cabbage was introduced, under the name of "Hollander"; but of such great merit has it proved that it may be said at the present time to be one of our best standard sorts. It is of strong and vigorous growth, and produces good sized, round, compact heads, which are so hard and solid that they weigh as a trimmed Cabbage more than any other. In quality it is all that can be desired. Such, briefly, is the description of one of the best Winter Cabbages on the list, and one that is this season destined for very large sales. V.

Having Regard to Seed Legislation

There is no special legislation which can be enacted that would benefit the planter, purchaser, or dealer in vegetable or flower seeds. It is, of course, comparatively easy to legislate relative to grass. Clover and agricultural seeds where admixtures can be detected. With vegetable and flower seeds the mechanical purity is, of course, a very easy matter to insure, but the two points that are necessary are vitality and purity of strain. Sometimes the finest strains, in unfavorable seasons, or because necessarily produced under certain climatic conditions, will have less strength of vitality than inferior stocks grown in other sections.

The vitality of seeds can, of course, be tested before their selling or planting but of much greater import is the quality of the stock and this can only be assured by careful inspection of growing crops, selection of stocks, and then, as a safeguard, by the testing of samples.

In the Pure Seed Bill now under advisement at Washington it is proposed that seed packets shall be labeled "United States Standard." Now, if from mechanical purity and germination alone, any seedsmen or dealer is allowed to use these words—"United States Standard"—the planter would suppose that necessarily he was obtaining first-class seed of choice, pedigreed strains, whereas he might be getting the cheapest rubbish.

All honest seedsmen will agree that there should be restraint by law—were it possible to have such restraint—"from willful adulteration or misbranding, or the sale of seed which they know, or by reasonable diligence should know, will not grow." But how is such "willful adulteration" or "willful misbranding" ever to be proved? W. ATLEE BURPEE.

Philadelphia, Pa.

Adulteration and Misbranding of Seeds

According to the report of the U. S. Department of Agriculture, just issued, on the adulteration and misbranding of seeds of Alfalfa, Red Clover, Orchard grass, and Kentucky Bluegrass, in carrying out the provisions of the act of Congress directing departmental investigation during 1909, there were secured and analyzed 1814 samples of seed, and in the report is published the analyses of 69 samples found to be adulterated or misbranded, together with the names of the seedsmen by whom they were offered for sale.

Of 359 samples of Alfalfa seed secured, 107 contained Dodder. No lots were found to be either adulterated or misbranded.

Of the 630 samples of Red Clover seed obtained, 54, or less than 10 per cent., were found to contain Dodder, as contrasted with more than 50 per cent. last year. The fact that a comparatively small number of samples of Red Clover were found to contain Dodder this year, the report says, is no doubt chiefly due to the low price of Clover seed in the Spring of 1909, little low-grade seed being imported from European sources. No samples of Red Clover seed were found to be adulterated or misbranded.

Of 379 samples obtained of Orchard Grass seed, 55 were found to be adulterated with seed of Meadow Fescue or Rye grass, or both. This is practically the same number of adulterated samples of Orchard Grass seed that was found in the calendar year 1908, showing that there has been little change in the amount of adulterated Orchard Grass seed on the market.

Of the 446 samples of seed obtained as Kentucky Bluegrass, 14 were found to be wholly or in part seed of Canada Bluegrass. This shows a decided decrease in the amount of adulterated seed of Kentucky Bluegrass on the market as compared with last year, when 39 samples were found. This decrease, it is stated, is no doubt partly due to the fact that there was less difference in price between Canada Bluegrass and Kentucky Bluegrass seed this year than in former years. Germination tests of this seed showed a variation from zero to 90 per cent., with an average of 62 per cent.

Summing up, the report says:

On the whole, the results of this work for the year are very encouraging. No adulterant was found in the seeds of the two staple forage crops Red Clover and Alfalfa: there was a decided reduction in the number of samples of adulterated Kentucky Bluegrass seed, and no increase occurred in the number of samples of adulterated Orchard Grass seed. The percentage of samples of Red Clover seed which contained Dodder was only one-fifth of what it was a year ago. Of the 40 firms whose names are published in this circular as selling adulterated seed, only 19 have been previously published for the same reason, indicating that the result of publication has been to deter dealers from continuing the sale of adulterated seeds. Of the 19 names in this circular which have previously appeared, only 8 have appeared more than once.

As has been formerly stated in its publications, the Department will examine and report promptly as to the presence of adulterants and Dodder in any samples of seed submitted for that purpose. According to the location of the sender these may be submitted to the Seed Laboratory, at Washington, D. C., or to any of the following laboratories main-

tained through the co-operation of the Department: Branch Seed Testing Laboratory, Agricultural Experiment Station, Columbia, Mo.; Branch Seed Testing Laboratory, Agricultural Experiment Station, Lincoln, Neb.; Branch Seed Testing Laboratory, Oregon Agricultural College, Corvallis, Oreg.

GREENHOUSE CONSTRUCTION NEWS

The King Construction Co. of Tonawanda, N. Y., report the following greenhouses to be erected of King iron frame material: Leonard Cousins, Jr., Concord Junction, Mass., 50' by 233'; C. E. Holbrook, Brighton, Mass., 2-31' by 225'; Victor Groshens, Roslyn, Pa., 42' by 500'; A. J. Boothman, Adams, Mass., 3-33' by 58'-2 1/4"; Henke Bros., Watervliet, N. Y., an addition of 58' on their 50' by 200' house; Meerbolt Floral Co., Secaucus, N. J., 2-21' by 125'; Orin S. Bacon, Canandaigua, N. Y., 21' by 33'-3"; A. C. Cappon, Canandaigua, 50' by 190'; Mrs. Annie L. Brooker, Richmond, Va., 28' by 208'; Irving Dunford, N. Olmstead, O., 2-21' by 100'; J. R. Spafford, Barker, N. Y., 2-21' by 100'; John Reimels, Woodhaven, L. I., N. Y., 28' by 100'; A. L. Brewer, Berlin, Mass., 35' by 100'. Also for Mrs. D. P. Rumsey, Buffalo, a semi-circular conservatory, radius of 11'-2".

Coming Exhibitions

Boston, Mass., Feb. 26, 27, 28.—Spring exhibition of the Massachusetts Horticultural Society of Plants, Flowers, Fruits and Vegetables. Schedules may be obtained from Wm. P. Rich., Secretary, 300 Mass. ave.

New York, March 16-18, 1910.—Exhibition of The American Rose Society, at the American Museum of Natural History, 77th st. and Central Park West. Secretary, Benjamin Hammond, Fishkill-on-Hudson, N. Y.

Boston, Mass., May 26-30, 1910.—Great Exhibition of Orchids and other plants, by the Massachusetts Horticultural Society. Secretary, William P. Rich.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, but necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing. It would often enable identification of specimens difficult to determine otherwise.

(45) **Wants to Study Landscape Gardening.**—I wish to study landscape gardening, that is, the drawing of plans and the necessary engineering that goes with it, but do not know where to apply for such training by correspondence, that being the only way I could afford to learn it. I also would appreciate any information you could give me concerning same. I am well versed in trees, shrubs, and in fact all other kinds of gardening. I would like to know the quickest way to learn landscaping.—J. T. D., New York.

—Perhaps some of our readers can enlighten this subscriber.

(46) **Trouble with Bay Tree.**—I enclose some leaves of a Bay Tree and I would like to know what the trouble is with them, the foliage is all dying; the tree seems to be all right. I had a man spray it and the leaves all turned yellow.—N. E. H. S., Mass.

—Your Bay tree, appears to us to have been crowded in too dark or too warm a place, and if this is the case would advise putting it in a cool, light shed, where plenty of water can be given it. Otherwise the leaves are healthy except for a few scale, which can be washed off.

(47) **Maggot on Marguerites.**—What will kill the small maggot found in the leaves of the Marguerite Daisies and Feverfew? The maggot is $\frac{1}{4}$ to $\frac{1}{2}$ inch long and are light brown in color.—M. H. K., Mass.

—Spray under the foliage with Nicotinic acid, Aphine, or Nicotene.

(48) **Nicotinic acid for Orchids.**—Would you kindly let me know through your columns what is the quantity of Nicotinic acid, sold at \$15 gallon, should be used as fumigating compound for spraying Orchids and young tender plants?—L. C. E., N. J.

—A wine glass full of Nicotinic acid to a gallon of water has proved a good spray; but why not write to the manufacturers for correct directions?

(49) **Coal Ashes for Concrete Mixture.**—Somewhere I have read about the use of anthracite coal ashes instead of sand for the making of sides for solid beds. Will you please state the proportion of Portland cement to be used with the same, also the proper size.—K., Conn.

—One part Portland cement to five parts ashes; a little sand in the mixture would be advisable. Solid beds are usually built 3 ft. high, 4 ft. wide, inside, and 6 inches thick, although the height varies according to crop to be grown.

(50) **Spots on Carnation Foliage.**—I have a house of Carnations and there is something wrong with them. I am enclosing a sample of the leaves. About two weeks ago I gave them a solution of copper; do you think I gave it too strong? Or is that the cause the leaves curl up and wither like old hay? The condition of the soil is good, not too wet or too dry. I keep the house about 64° in day time and from 52° to 54° at night. I am very much worried about these Carnations and I would be more than thankful if you could give me a remedy to hold them. I noticed them wilting about three days ago and they are gradually getting worse.—J. C., Long Island.

—Leaves sent here appear all right, except for a little spot, which you could get rid of by spraying with Bordeaux mixture. Your trouble is evidently with the copper solution you used, which has burned the plants up, and for which we see no remedy. Sulphate of copper should not be used on any plants without being mixed with other ingredients, as it is very caustic.

(51) **Cinch Bug on Dahlias.**—Would like to know a remedy or preventive for "cinch bug" on Dahlias. Have tried to grow Dahlias several seasons but mostly with the same result, bloom

buds punctured at an early stage of their growth, causing distorted flowers or destroying them altogether. Have tried various insecticides, even to Paris green, which they seem to enjoy and thrive on. The insect referred to is a small brown fly, shield shaped when the wings are closed, and has a white spot on each wing; it is about an eighth of an inch in length. It is well known to Chrysanthemum growers in this locality, Western New York, as it attacks same also.—T. S., W. New York.

—The cinch bug, or tarnished plant bug as some call it, is a difficult insect to fight, and but small results have been met in efforts to cope with it. The Missouri Experiment Station has recorded in its Bulletin No. 47 some interesting data concerning the pest, which may contain something of interest to you. Jarring a plant in the morning so that the bugs fall into a pan containing diluted kerosene is often resorted to. Watchfulness in early Spring, when shoots of the Dahlia contain the eggs, will result in some destruction if the ends are nipped off and burned. Perhaps some reader can supply us with a remedy.

(52) **Nitrate of Soda for Lilies.**—Please let me know in the next number of the Exchange if nitrate of soda is good to force Lilies, and how much must be used?—L. W., New York.

—Weak solutions of nitrate of soda are the safest, so would advise one teaspoonful to three gallons of water, applied once a week. Why not try liquid cow or sheep manure, used twice a week? You will find it safer.

(54) **Destroying Insect Eggs on Trees.**

—Will you kindly inform me through the Exchange what is the best mixture to use on fruit trees to destroy insect eggs at this time of year? Also can you please tell me what the mixture was that the government recommends for syringing trees at this time of year?—G. G., New York.

—There are on the market two or three good preparations suitable for your purpose, Kill-O-Scale and Scalecide being the most prominent for outdoor work. These are sold by many of our advertisers. We have no data at hand from the Government just now. Write to the New York State Department of Agriculture at Albany, N. Y., for its bulletin on that subject.

(55) **Fungus on Soil.**—On top of the soil in the flats in which I have seed sown there is a grayish looking substance which comes on one side of a flat and spreads out toward the center. My house and soil are new, been in use only about one month. I have discovered this formation in the last day or two. Will you kindly give me your advice regarding same?—W. H. G., New York.

—The grayish looking substance which is bothering you is the growth of a fungus, secreted in the lumber of which the flats are made, and perfect growing conditions in the greenhouse have caused it to develop rapidly. Would suggest the thorough drying of empty boxes by placing them on the boiler or pipes. An application of fresh lime inside the boxes would also do good. Scatter air slaked lime on the fungus where seeds are sown. An application of Bordeaux Mixture would also be effective on the fungus, but on account of tender seedlings you should be very careful to put nothing injurious to plant life on the soil in the flats.

(56) **Locating Legs for Benches.**—How far apart should be put legs for benches, benches 4 feet wide? Did anyone have experience with cast iron benches? Are they strong and good for cut flowers and pot plants?—C. L., S. Dak.

—(1). Four and a half to five feet apart. (2) We do not know of any grower using a solid cast iron bench. Many use the iron frame legs, etc., on which rest the boards, concrete or slate slabs, all of which are good, and prove quite profitable. Write to some of the greenhouse builders for their catalog.

(57) **Asters for Commercial Purposes.**—Will you kindly send us the names of the best Asters for commercial purposes, giving two or three kinds in each color.—M. C., New York.

—White: Crego, White Branching, Mikado, Hohenzollern. Pink: Semple's Pink Branching, Daybreak, Vick's Late Pink Branching. Lavender or purple: Violet King, Purple Branching, Lavender Gem. All these are suitable for field culture and will give medium to late crops of cut flowers.

Cultural Directions

For the benefit of Seedsmen and all who retail Seeds, Bulbs, Trees, Shrubs, Fruits, etc., we have had written by experts over fifty single page leaflets covering the raising and care of these various subjects. Their free use will save your clerks much valuable time. A sample set will be forwarded on application.

Newport (R. I.) Horticultural Society

The regular bi-monthly meeting of the above named Society was held on February 22, with President James Robertson in the chair. Owing to bad weather the attendance was small. The premium list for the Rose and Strawberry show was presented and read, but action on same was deferred. Only a few changes are recommended to the list as adopted for last year. Special prizes are offered by J. C. Vaughan and S. G. Harris, the latter for collections of Peonies, and the former for Sweet Peas; and by Mrs. Goelet for a vase of Roses \$25, and for a vase of Carnations \$25, one prize only in each class. For the Fall show A. J. Rickards of Rickards Bros., New York, who was present, offered on behalf of his firm a cup, with a ten dollar gold piece as a second prize to be awarded to whatever object the Society may designate. John Lewis Childs also offers prizes for Gladiolus. From present indications more than one set of judges will hereafter do the work of judging at our shows, but all of home talent. A. M. L.

Toronto G. and F. Club

The Annual Carnation Show of the Toronto Gardeners and Florists' Association was held in St. George's Hall, Elm Street, Toronto, on Friday, February 18, and though not up to the best form of meetings was still very successful.

The tables were nicely filled with fine stock. Unfortunately, two fine exhibits from the United States did not arrive in the city until Saturday morning and one other not until about 5 o'clock on Friday. When the secretary, E. Collins, heard they were on the road, the judging was held over until 7 o'clock on account of their coming in. The judging was done by H. Dillemnth of this city and E. Collins. They awarded the gold medal to Joseph Heacock Company of Wynote, Pa., for a fine vase of Dorothy Gordon Carnation. These were large flowers of a good color and had stood the journey well. A vase of Toreador from H. Weber & Son Co., Oakland, Md., which arrived only on Saturday morning, was displayed in a King street florists' window. The flowers were in fine shape on splendid stands and attracted much attention. They appeared to be quite as good as when this variety was exhibited here last season, and certainly would have given a close run to the winning of the medal again. A fine vase of Mary Tolman from Hunt Bros., Park Ridge, Ill., which also arrived on Saturday morning, was placed in Dunlop's window and many of the boys saw it on Saturday. This is also a handsome variety and arrived in good condition. The Dale Estate put up a very fine show and a vase of O. P. Bassett shown by them was only one point behind the winner of the medal. Their Roses were also exceptionally fine, quite up to their usually high standard. Dunlop had up several varieties of Carnations, all very good. R. Jennings of Brampton, Ont., also put up some extra fine Carnations. Messrs. Crowhurst & Son and William Jay & Son staged some excellent flowers, and Wm. Penley of Brampton, exhibited Carnations, Valley and Violets. Sir H. M. Pellatt, whose gardener, T. McVittie, is our president this year, put up a group of well grown plants for which a certificate of merit was awarded. A nice group of plants was put up by our faithful secretary, E. Collins and Messrs. Jay & Son and T. Mantion also put up groups of plants. The show was opened by the Mayor and a short address was also given by Mr. James the Deputy Minister of Agriculture. The show was free to the public and was well attended. T. MANTION.

Tri-City Florists' Club

At a meeting of the Tri-City Florists' Club held at the home of Harry Bills on North Brown street, Davenport, Ia., arrangements for the fourth annual banquet to be held on the evening of March 17, at the Outing Club were completed. At the meeting Theodore Ewoldt and William Goos of Bettendorf addressed the Club on the subject, "How to Advance the Profession Commercially."

Elberon (N. J.) Hort. Society

The Society held a meeting on February 21, President Peter Murray in the chair. The preliminary schedule for the Monmouth County Fair was read over and approved. A. Bauer will read a paper on the "Culture of Bulbs" at the first meeting in March. Peter Ewen was awarded 75 points for a vase of Stocks. A. MacDonald was elected an active member of the Society.

ALEX. FLEMING, Rec. Sec.

When You Buy Your Aster Seed of James Vick's Sons

YOU ARE COMING DIRECTLY TO HEADQUARTERS

WE believe it is beyond dispute that this concern, which has introduced more new varieties of Asters than any other Seedhouse, and growing each year an acreage of more than double that of any competitor, has done more for the development and dissemination of High Grade Asters than all other American Seedsmen.

Before You Place That Aster Seed Order

look over our "**Aster Book for Florists.**" Just notice it doesn't give you the impression that each and every variety is exactly alike in its superiority over all other kinds, but it points out to discriminating Florists what characteristics each variety possesses under certain, not all, conditions. The problem of what to grow this Summer will be made comparatively easy, if you study carefully our "**Aster Book for Florists.**" If you have mislaid your copy, or if you failed to get one, just drop us a line saying you are a Florist and we will mail a copy immediately.

Don't delay. Look this matter up at once.

One of these fine days you will need those seeds, and of course you want the best seeds. Get that "**Aster Book for Florists**" at once and become acquainted with all of the leading varieties, not only those introduced by us, but all the leading kinds from whatever sources. Attend to this matter today.

Vick's Mikado Pink "Rochester"*

Reduced to 1/2 Natural Size

*The story of its new name is of more than passing interest. Members of the Rochester Chamber of Commerce, which has recently chosen the Aster as the representative flower of this city, were so pleased with the color, shape and size of Vick's Mikado Pink, that they have selected it as the official flower of Rochester, and have requested that we rename it "Rochester." Therefore, in addition to its former name it now bears the honored name of this city.

During the recent Industrial Exposition reproductions of this Aster have appeared in countless papers, programs and private advertising matter. Thousands of souvenir spoons, watch fobs, and hat pins, carrying a design of this Aster, have been sold by various concerns. The design and coloring of this beautiful flower are an important feature of the mural decorations of the Temple Theatre, just finished, which, by the richness of its appointments, in many respects, surpasses any other playhouse between New York and Chicago. It will also appear in the color schemes and figurative designs of the decorations and furnishings of the handsome new lake steamship, The Rochester.

Naturally we are proud of the various honors which have been bestowed upon this flower, especially in view of our prediction last year that it would spring into popularity surpassing that of any other variety in the last ten years.

James Vick's Sons, Rochester, New York

IT WILL PAY YOU TO Sit Up and Take Notice

of my prices on the following named stock. I solicit an opportunity to quote special prices in quantity for any and all of them.

250,000 Blackberries grown from root cuttings; consisting chiefly of

Blowers, Kenoyer and Ward—the three best varieties as yet fully tested.

California Privet, 2 years 1½ to 2 feet and 2 to 3 feet.

Yucca filamentosa in all sizes—from mailing grade to large clumps

King Humbert Canna—the Canna of the age.

Kriemhilde and Jack Rose Dahlias, strong roots.

Clematis paniculata, 2 years old.

Hollyhocks, Double in colors and mixed, **Single and Allegheny**—all fine field grown roots and free from disease.

Hardy Chrysanthemums, in field clumps—splendid plants of splendid varieties.

Hardy Pinks and Aquilegias, in field grown clumps.

Hardy Perennials, in field grown plants and clumps galore.

J. T. LOVETT, Little Silver, N. J.

Please mention the Exchange when writing.

"FLOWER OF FAIRFIELD" THE "EVERBLOOMING CRIMSON RAMBLER"

The best Climbing Rose in the market, flowering during the whole Summer in large clusters of finest crimson color.

Prices for first rate plants with 3 to 6 shoots, open ground grown, \$11.00 per 100, \$100.00 per 1000.

Extra strong plants, with 5 and more branches at \$15.00 per 100.

Package free, cash with order only.

SCHULTHEIS BROS., The "Old" Rose Gardens, at Steinfurth, near Bad-Nauheim, GERMANY

AMERICAN ASSOCIATION OF NURSEYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-president; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., Treasurer.

HOUSTON, TEX.—The La Porte Orchard Co. has been incorporated to grow, sell and purchase seeds, plants, trees, etc. The capital stock is \$10,000, and the incorporators are Daniel Powell, J. H. Powell and W. A. Pittat of Kansas City.

NEW HAVEN, CONN.—The Northeastern Forestry Co. has completed negotiations for the purchase of 100 acres of land in Cheshire, to be used as a forestry nursery. The company's plant in the Adirondacks will be removed to the new site.

Fancies in Pruning Privet

The Italian gardens of many an old estate in England have afforded interest and astonishment to many a visitor to them to see the various likenesses to animals, birds and other objects formed from various bushes, chiefly from the Yew, as it proves very tractable to the use of the knife and to the gardener's desire to train it into various desired shapes. But little of this kind of work is to be seen in our midst. Our country is too young yet for much of it to be developed, but it could be done, especially as the English Yew, from which the many curious objects noted as existing in Europe have been fashioned, thrives very well here. The California Privet lends itself so well to the efforts of the pruner that it is becoming common to see it forming many shapes differing from its natural one. Here is one before us which shows what an effort has been accomplished. As the gardener was not present when our photographer took the picture, we are unable to say what it was designed to represent, but it shows how easy it is to make almost any object of the California Privet, with a little care. There are many other species of Privet that would not object to pruning more than the California one does. Take the evergreen one, *Ligustrum Japonicum*, for example. It is a thrifty grower, which favors its use where pruning is desired. Used as the one shown in the illustration has been, it would be evergreen the whole season through, let the Winter be a severe one, which cannot be said of the Californian when in exposed places. Another evergreen one, *lucidum*, common in some places in the South, and hardy in zero weather when protected one by another in hedges, has still handsomer foliage than *Japonicum*.

It may be that the California Privet is not an ideal hedge plant, as some contend, but the immense stock for sale, as shown by the advertisements in the EXCHANGE, indicate a faith in continued calls for it. There is a limit to the territory it can be used in, because that in hard Winters it will not endure the cold of the far northern States. In those places the *Ibota Privet* is named as a far hardier one. This one is not advertised to near the extent the Californian one is, showing that it has not attained the popularity of the other, or else that advertisers do not look for orders for it from distant points.

Those who have disputed the claim of the California Privet, *Ligustrum ovalifolium* have not named anything to take its place—anything of the same quick growing nature and pleasing green foliage. It is expected that those who have lost it by freezings in cold Winters would look for something better, but if they have found it they do not make it known, nor is it advertised. It would be a favor to name such a plant, if such there be, a something that will stand a continuous zero cold a good part of the Winter. A drop to zero now and again does not hurt the Californian. In the vicinity of New York City zero is recorded several times through an average Winter, but this privet does not mind that. The fact that this Privet may be cut to the ground, and, usually, be all the better for it, is much in its favor, as should frost hurt it, the trouble can soon be remedied by cutting it down and renewing the hedge from a certain point.

There are bushes of the California Privet, and hedges too, in the vicinity of Philadelphia, that had zero on them for days in succession, and which have never been hurt.

Those opposed to this Privet say its use by everyone makes such a sameness as to be much against its use. Travelers often tell us that the beauty of rural England comes from the miles of roadsides bordered with the Hawthorn, which shows all do not think alike in regard to a sameness.

Sophora Japonica Planters often are on the look out for large growing trees to bloom late in the Summer; and many of them are well acquainted with the *Koelreuteria*, a Japanese tree, bearing light yellow flowers in Midsummer. This is not the only tree they could get. There is another Japanese one, the *Sophora Japonica*, an excellent Summer blooming tree. As with the *Koelreuteria*, its flowers come in panicles, but unlike it its flowers are cream colored.

In respect to its growth it makes a much larger tree than the *Koelreuteria*, fitting it well for many places. It needs a position where it may grow at will, then it is a fine spreading tree as well as a tall one. In its younger years the bark of this tree is of a deep green color, unlike that of any other tree that comes to mind now.

When in good, deep soil the growth of the *Sophora* is not slow, as it is when in poor soil, and trees of but 8 ft. size will sometimes flower. When the large trees, those of 40 ft. say, are in flower, in July, they are a great attraction.

Fragrant Magnolias Referring to the notes on "Fragrant Magnolias," which appeared in a recent issue of the EXCHANGE, Wm. F. Bassett writes:

"In your item about 'Fragrant Magnolias' you have omitted the best one—*Magnolia Soulangiana*. This is as fragrant as *glauca* and to me more agreeable. I think *Magnolia purpurea* is also quite fragrant. *Magnolia tripetala* has some odor, but rather unpleasant, so much so that my boys used to call it *Magnolia stinkiana*. It is not uncommon for *Magnolia glauca* to retain some green leaves in a sheltered position here, and the leaves

Fancies in Pruning Privet—Liberty Bell

do not ripen and fall off, like most deciduous trees, until they are pretty severely frosted."

If Mr. Bassett has a *Magnolia Soulangiana* as fragrant as a *glauca*, he assuredly has a most valuable sport. I can assure him there are no *Soulangiana*s here, nor have I ever heard of one as "fragrant as *glauca*." There is a slight fragrance to the flowers, perceptible when they are close to one's nose, much as *conspicua* has. The flowers of *Magnolia glauca* fling their fragrance around for a hundred feet away, when the wind is right. In the article to which Mr. Bassett refers there should have been one more fragrant one mentioned, the *M. Fraseri*. When a flower of this is gathered and held near the nose the fragrance is delicious, but it is not thrown on the air as is that of the *M. glauca*.

Flowers of Pterostyrax hispida

The flowers of the new tree, *Pterostyrax hispida*, are among the most attractive of any that appear in late Spring. Although termed new, it is not new except in the sense that hardly anyone has it or knows of it, for it has been in collections of trees here in a few gardens for 30 years or more. As it requires some dozen years for it to grow from a small plant to a size to bear flowers, it was some years after its introduction before any one knew of its value. Because of the resemblance of its flowers to those of the *Wistaria*

in many respects, it is getting to be called *Wistaria* tree, but this is a little confusing, because when the *Wistaria* vine is grown in standard style it is called *Tres Wistaria*, and this many confuse some folks as to which one of the two is meant when called by the common name.

This *Pterostyrax* is a Japanese tree, forming, with its growth, a round headed shape, not unlike that made by the Norway Maple. It has not been introduced long enough to enable to know what it will look like with age, probably it will not make a large tree.

The flowers are white, finely divided, and though drooping like the *Wistaria* the racemes are not of the same length, and they are broader in proportion to length than those of *Wistaria*.

As mentioned, unlike some shrubs which flower in a year or two, the *Pterostyrax* takes time first, but when the stock that is now being distributed flowers there will be quite a demand for the trees from all who see them. As it flowers and forms seeds freely, and seedlings are not difficult to raise, there should be young trees for everyone when the demand comes.

Everbearing Mulberries What is called the everbearing Mulberry, as known to the nurserymen of the northern States, is Downing's Everbearing. In former years this was written of and listed as a variety of the common Italian Mulberry, but anyone familiar with the Downing's knows as soon as he sees it that it is a variety of the wild Mulberry, *Morus rubra*. There is one more common than this one sold by southern nurserymen, which they call Hick's Everbearing, having a leaf much resembling the Downing's.

Regarding the everbearing character of Downing's, it does not appear to have any more claim to this than many ordinary Mulberries. The common white Mulberry, *M. alba*, does not ripen all its fruit at once. There is a succession of ripening lasting over some six weeks in all. When the first berries are ripe there are others but just forming, so that this species is as much everbearing as Downing's, for it does no more than this; six weeks is as long as it continues to ripen its fruit.

There is a great difference in the fruit of these two. The white Mulberry, *alba*, is not always white, some trees have light pink fruit, others quite black and the fruit itself is not nearly as long as the Downing's, which is, too, a dark red fruit.

As to the Downing's itself, it may be that its berries ripen over a longer period than the type, *M. rubra*, but it does not appear so to do.

The propagation of Downing's is by layering or grafting, using any other strong stock for it, but *rubra* makes the best as being closer to it in affinity. All the species are easily increased from seeds, sown soon after they ripen or very early in Spring.

The white one, *Morus alba*, furnishes the leaves for the feeding of silk worms, but the worms will eat the leaves of Osage Orange, and perhaps other kinds as well.

Feeding Nursery Stock When nursery stock is well fed the growth is so quickened that it pays for the cost of manure many times over, besides giving to the plants in vigor which stands them in good need when they are transplanted. There is no better time than Winter for applying manure, scattering it broadcast among the stock. When the rows of trees are far enough apart to admit of a narrow sled being drawn along them, it is a capital way to get the manure to them; and in this way it can be spread from one end of a block to the other. Manure got on in Winter will all have pretty well disappeared by Spring. Rains and snows will have disintegrated it and have carried it into the soil, to help along the roots with food as soon as they commence calling for it in Spring. It is a mistaken course that decides on trees getting along without the help of manure. They may grow and grow well, but with manure they grow still better, enabling a certain size to be sold a year or more in advance of what it would have been without the manure.

In setting new blocks of young trees the ground should be well manured, the plan of many to place manure all along an opened trench before setting the plants being an excellent one.

The Sweet and the Sour Gum

Time was when the Sour Gum, *Nyssa multiflora*, was much sought for ornamental planting, because of the yellowish scarlet color of its Autumn foliage. It is yet planted for the same purpose, but as there are now so many trees of beautiful Autumn colors it is not the only one now set out for the purpose. As between it, the Sour Gum, and the Sweet Gum, *Liquidambar styraciflua* a great many prefer the latter, both for its Fall color and for its general handsome appearance at all seasons. Its star shaped leaves are always admired, even in Summer when of their usual green color, and when Autumn comes these change to a combination of colors of green, yellow and scarlet, which is decidedly attractive, and to many is more pleasing than that of the Sour Gum.

The foliage of the Sour Gum is in some seasons of a brilliant scarlet, at other times not so attractive. It is one of the first trees to take on the bright colors of Autumn and one of the first to shed its leaves. In its favor is the fact that it will endure the temperature of almost the very coldest States, while the Sweet Gum cannot stand as much cold, though it is wild in southern Pennsylvania, and, indeed, as far as Connecticut in the proximity of the sea.

Both species are considered difficult to transplant, which means that severe pruning should follow transplanting; especially is this true of the Sour Gum.

F. E. — The Best Advertising Medium.

concluded, Pres. Bennet read a very able paper on "American Beauty Roses," after which he invited a general discussion by the members several of whom took part, among the number being Messrs. Waite, Nichol, Moony and Lahm. Our next meeting will be held on Wednesday evening, March 2, when it is expected there will be a very fine exhibit of Roses, as Pres. Bennet has offered a prize for the best collection of one dozen of any variety. Secretary Waite will read a paper on "Gardeners and the Gardening Profession." LEE WHITMAN, Cor. Sec.

Massachusetts Horticultural Society

On Feb. 19 at Hort. Hall just before the weekly lecture began, John K. M. L. Farquhar addressed the meeting on the subject of the "Elm Trees on Commonwealth Avenue," and read the resolutions adopted at the meeting of the Boston Gardeners and Florists' Club on February 16. The subject evoked much discussion. Mr. Farquhar finally moved that the resolutions as read be also adopted by the Society. The motion was seconded by Robert Cameron, and the resolutions adopted.

In a few appropriate words Chairman W. J. Stewart introduced the lecturer of the day, Glenn C. Sevey, editor of the New England Homestead, Springfield, Mass., who delivered a scholarly lecture on "The New Agriculture and its significance to New England." A very interesting discussion followed the address. The principal topic discussed was "What is the best way to educate the schoolteachers so that they will be able to give correct instruction in agriculture and horticulture in the schools." It was the consensus of opinion that the schoolteachers at the present time are not qualified to give the best advice and instruction.

There will be no lectures on February 26, as that is one of the days of the Midwinter exhibition; therefore, the next lecture will be on Saturday, March 6, and promises to be one of great interest. The subject is "Horticulture as a Profession for Woman." The lecturer will be Miss Laura Blanchard Dawson of Jamaica Plain, who is a teacher of Horticulture at the Lowthorpe School of Horticulture, Groton, Mass. Miss Dawson is a daughter of Jackson Dawson, the famous horticulturist of the Arnold Arboretum. R. C.

Detroit Florists' Club

The announcement of a paper on Cyclamen to be read by Mr. Winterich of Defiance, Ohio, our long distance Club member, brought out a good attendance. His paper was more than expected, very plain and simple, beginning with the process of sowing, which he recommends to be done in flats, making rows 1 1/2" apart and dropping the seeds in the rows 1/4" apart, and finishing with useful pointers on selecting seed plants. He also lays great stress on preventing the soil from becoming covered with green moss. In the seed bed he avoids this by covering the ground with sphagnum and in the later stages of cultivation he recommends frequent working of the soil. The best selling time is Christmas, and to have good perfect plants then sowings must be made in August. Light bottom heat and fresh air above are absolutely necessary. A light hot bed with sash laid on high enough so the foliage may get the benefit of light winds is summer quarters for Cyclamens. Leaf mould, sandy loam and charcoal, with bone shavings, sifted through a fly screen, are best suited after the plants have reached the 4" pot stage; liquid manure may be applied moderately. Night dews during August and September greatly enhance the bud setting operation, and sashes should be removed nightly during that time. Different localities and different atmospheric conditions may change this time from August and September to July and August, at any event it should not be overlooked. Only the very best plants producing clear colored flowers should be selected early in the season for the producing of seeds. Spotted flowers are the result of poor seeds caused by the intervention of flies or bees in the fructification process.

After a thorough discussion of this very valuable paper the question of the flower show was again brought up. Rather discouraging remarks heard during the past few weeks caused Mr. Danzer to suggest the abandonment of a show at the Wayne Pavilion and substitute for it a show at Harmon's Hall. This brought out a good deal of feeling, and many a half hearted supporter turned into a very ardent believer in the good results of a first class show. Wm. Brown, who acted as chairman, took full advantage of the situation and started a subscription list for a guaranteed fund. This result netted over \$1000, and the meeting adjourned until Wednesday, at which time our option on the Wayne Pavilion expires.

FRANK DANZER.

Yonkers (N. Y.) Hort. Society

A very interesting meeting of this Society was held on Wednesday evening February 16 at which a number of new members were admitted. All the officers were present, President Bennet in the chair.

As there was a prize offered at our last meeting by Peter Macdonald, for the best collection of one dozen Carnations of any variety, a large number of very fine Carnations were shown. The judges appointed by the president were Mr. Nichol, A. Macdonald and W. Wright. After viewing the exhibits the judges decided as follows: First prize, W. H. Waite; second, J. Goff; honorable mention, R. Cochrane and R. Cummings. H. Scott also received honorable mention for a very fine exhibit of Callas. It was decided that the Society have a dinner on Thursday evening, March 10, at Park Hill Inn for the members and their friends.

After the business of this meeting was

J. L. C.

Utica, N. Y.

I have noticed by the Utica items in your last week's issue of the EXCHANGE, that I have been to Clifton Springs on account of ill health, which was entirely an error. I have been away three weeks on vacation, and thankful to say I have never felt better than I am at present. This item has caused a great deal of annoyance, answering inquiries from my friends.

PETER CROWE.

Firms Who are Building

BISMARCK, N. D.—R. D. Hoskins will build two additional greenhouses this Spring.

YORK, NEB.—J. Lawson, formerly of South Dakota, has purchased ten acres of land here, and will erect a large greenhouse.

BELLOIT, WIS.—John Rindfleisch is to build a new greenhouse, in four sections, each 25 by 100 ft., with an office, potting room and boiler shed.

TOMAH, WIS.—Louis Stoerkel is preparing to build two additional sections to his greenhouse, 18 by 65 ft. and 18 by 125 ft. respectively.

Leavenworth, Kan.

J. E. Meinhardt, owner of the Custom Flower Store, 404 Shawnee st., has bought one of the biggest greenhouses in the State of Missouri, located at Webb City. The plant embraces five houses, three 30x300 feet, two 20x200 feet, and one 10x200 feet, embracing 45,000 feet of glass. They are modern in every respect, having been but recently constructed. With them Mr. Meinhardt bought a modern 8-room house and four acres of land. The purchase price was \$15,000. He takes possession March 1. An experienced grower will have charge. The purchase was made so that its output could be used in the local flower store. It will also supply a store in Webb City and a large wholesale business.

A Visit to Mr. Burbank

While at Santa Rosa I enjoyed a visit with Mr. Burbank. In his greenhouse I saw a set of seedling berries that greatly pleased me. They were hybrids of a Carolina berry with Phenomenal, Logan, Mammoth, and Himalaya. The first three are the standard market berries with us. The Logan, as is well known, is a natural cross between the Dewberry of California and the Cuthbert Raspberry. Phenomenal is a cross of the same class made by Mr. Burbank some years ago, while the Mammoth is a superb berry in the Dewberry line as to appearance but a cross of our Dewberry with the Eastern Blackberry of the Layton class. The Himalaya is a wonderful grower and bearer, in a class by itself, and at its best well worth while for the garden. It is ferociously thorny.

In the set of many hundred seedlings there are scarcely any with the faintest trace of thorns, yet the little fellows have, all of the appearance of their thorny parents. They are the fifth generations, and Mr. Burbank says that their parents were good berries. It looks as if a few years would give us high-grade berries of these classes, perfectly thornless, a consummation to be devoutly hoped for.

It is a pity that the Logan, Phenomenal and Mammoth are not fully hardy in the East. Since their advent here the old style Blackberry is in very little demand, and I suppose that probably Mammoth, with its almost seedless sweet fruit of large size, is easily in the lead in popular estimation.

I was a little curious in view of some criticism that I had read, to taste the leaf of the thornless Cactus, and tried those of two varieties. I found them to taste very much like raw Potato, and there seems to be no tough fibre in those that I tested. I am neither enthusiastically optimistic nor at all pessimistic as to the thornless Cactus. I believe that it will find a distinct and important place in our agricultural economy, but not at all what its advocates claim. But of this some other time.

CARL PURDY.

Newcastle, Ind.

Frederick J. Benthley Floral Co. has sustained a loss of \$5000 through the collapse of a house 200x30 ft., all its contents being buried under a mass of cedar rafters, glass and a plentiful lot of snow. In the house were 20,000 young plants of American Beauty Roses, which the firm had contracted and been paid for to another firm in another city. Besides this there were thousands of cuttings which were being grown on for the company's own use.

It is the intention of the firm, according to Manager Otto L. Benthley, to rebuild the house as soon as the weather permits. The business will not be interfered with in the least, as arrangements have already been completed to get another supply of cuttings, not only for their own use, but to supply outside customers. No insurance was carried against this form of loss.

New Orleans

Mrs. Eblen, wife of John Eblen, died Feb. 12 and was buried the following day. Mr. Eblen, who is one of the pioneer florists of New Orleans and has been the treasurer of the New Orleans Hort. Society since its formation, is now retired from business and is held in high esteem by his former associates and all who come in contact with him; he has the sympathy of the trade.

At the February meeting of the Hort. Society it was reported that the Carnival flower trade was above the average. A. Doescher had brought to the meeting six varieties of forcing Cucumbers of which he makes a specialty during the Winter months and a general discussion followed on the cultivation of this type of Cucumbers.

The Metairie Ridge Nursery Co. had some of their famous Roses, Bride and Bridesmaid, of A-1 quality, also Mrs. Jardine with stems from 40 to 44 ins.

Continued cold weather helps along the cut flower business as people are unable to go out in their yards and cut Roses and other flowers; usually at this season they can. Single Violets, however, form an exception as they always bloom more profusely in cold Winters and at the time of writing they are literally a sheet of blue.

CRESCENT CITY.

Dreer's Superb American and Imported Asters

We take special pains to secure only the very choicest Asters and feel sure nothing better in quality can be had at any price. Our stock of American varieties are grown under our own supervision, while the Imported sorts are procured from the most reliable sources.

Dreer's Superb Late Branching Asters

The finest Aster for late August and September blooming.

The plants form strong, branching bushes, 2 to 2½ feet high, bearing on long, strong stems their handsome Chrysanthemum-like flowers, which, under ordinary cultivation, average 5 inches across. The form of the flowers, together with the length of the stems, places them at the head of Asters for cutting. They come into bloom from two to three weeks after the average type, usually being at their best during September.

	Trade pkt.	Oz.
Azure blue. A rich deep lavender	\$0.25	\$1.00
Pure White. Extra fine stock	.25	1.00
Shell Pink. An exquisite shade	.25	1.00
Rose Pink. A very desirable color	.25	1.00
Deep Rose. Rich and brilliant	.25	1.00
Deep Purple. Royal deep blue	.25	1.00
Lavender. A pale greyish-lavender	.25	1.00
Crimson. Very rich	.25	1.00
Finest Mixed. All the colors	.25	.75

Dreer's New Late Aster "Crimson King"

A superb new late-branching variety, with perfectly double flowers of rich, rosy crimson, full of fire. Fine for cutting, showing up well under artificial light. 50c. per trade pkt., \$3.00 per oz.

Queen of the Market Aster

Crego's Giant Comet Asters

Magnificent fluffy flowers, averaging over 5 inches across, with long strong stems; the finest of this type. Comes into bloom in August, continuing well into September, and, unlike most of the Comet sorts, stands when cut and is a good flower to ship. We offer two colors, our own saving, of the highest quality.

	Trade pkt.	Oz.
Shell-pink	\$0.40	\$2.50
Snow-white	.40	2.50

Dreer's New Aster "Pink Beauty"

A magnificent cut-flower variety, in bloom from early August until well on in September; 24 to 30 inches high; flowers average 4 inches across, on long, strong stems. Color a delicate blush pink, and pronounced by experts to be the finest pink midseason sort yet introduced. 50c. per trade pkt., \$4.00 per oz.

Late Aster "Violet King"

A new and distinct color in the Late Branching class, fine large double flowers of a pleasing shade of violet, a strong, free grower and very free flowering. 40c. per trade pkt., \$2.00 per oz.

Early Wonder Asters

This is the earliest Aster in cultivation, being in full bloom when Queen of the Market is only in bud, frequently coming into bloom in late June. Very valuable for cutting.

	Trade pkt.	Oz.
White. Pure glistening white	\$0.40	\$2.00
Pink. A good, clear pink	.40	2.00

Dreer's Superb Late Branching Aster

Four Fine American Asters

Daybreak. Of symmetrical growth; attains a height of 18 inches, and produces during August, perfect globe-shaped flowers, of a delicate pink tint. 50c. per trade pkt., \$2.50 per oz.

Lavender Gem. One of the most beautiful Asters. Of Comet type, with large artistic, loosely-arranged flowers of the most charming shade of lavender imaginable. 50c. per trade pkt., \$2.50 per oz.

Snowdrift. A most valuable variety, coming into flower in July, with superb plumy snow-white flowers of the Ostrich-feather type. 60c. per trade pkt., \$3.50 per oz.

White Pecca. One of the largest and most perfect of the Comet type, bearing flowers 5 inches and over across, formed into a plumy globe of glistening white. Blooms in August. 60c. per trade pkt., \$2.50 per oz.

Imported Asters

QUEEN OF THE MARKET ASTERS.
The best and most popular early Aster.

	Trade pkt.	Oz.
White	\$0.20	\$0.60
Lavender	.20	.60
Pink	.20	.60
Bright rose	.20	.60
Purple	.20	.60
Crimson	.20	.60
Mixed	.15	.50

PAEONY PERFECTION ASTERS.

A splendid mid-season variety.

	Trade pkt.	Oz.
Crimson	.30	1.60
Light blue	.30	1.50
Brilliant rose	.30	1.50
Purple	.30	1.60
Bright pink	.30	1.50
Pure white	.30	1.60
Finest Mixed	.25	1.25

OSTRICH FEATHER ASTERS.

A mid-season type with large fluffy artistic flowers.

	Trade pkt.	Oz.
White	.30	1.50
Lavender	.30	1.50
Bright rose	.30	1.50
Salmon pink, extra fine	.30	1.50
Violet blue	.30	1.50
Vivid crimson	.30	1.50
Mixed	.30	1.25

Pacific Coast Notes

As everywhere, January and February are rather dull months for San Francisco florists, yet the general expression is that they have been better than they had hoped. California has had a cold spell for us. It is nineteen years since the thermometer marked as low a figure. At Santa Rosa on Feb. 4 it was 23° above, while even close to salt water on San Francisco Bay there were frosts, and in places the Callas, which are such a winter feature there, were bitten, and Geraniums suffered a little.

There are many Orange trees in the open ground all about San Francisco Bay, with two regions quite north of San Francisco where they are grown commercially, and it seems rather odd, after reading Mr. Barabart's account of

the injury in southern California, to see that no tree seemed at all injured by frost. I saw Navelas at Santa Rosa apparently untouched the morning that 23° above was reached. To florists, the cold snap meant a scarcity of flowers.

Rather a novelty in the market are the Sweet Peas grown under glass by the Holland Nursery of Elmhurst, on the east side of San Francisco Bay. They wholesale at \$1.25 per dozen bunches and are very good. On Feb. 5 Daffodils from the open ground had become quite plentiful and sold at \$1.25 to \$1.50 per 100. About all are still the yellow Ard Righ. Later they will go as low as 25 cents per 100, and no buyers at that. Very few forced Tulips are to be seen. Flowering trees from the open have begun to appear and will soon be in profusion. About the best thing

in green now are the Eucalyptus, in full flower and very plentiful. For funeral work the Mahonia and Galax are staples all through the winter. Most of the Azaleas on the Coast are Japanese grown and rather poor, but the Japanese wholesale florists, Domoto Bros., imported and put on the market some really good Belgian stocks this winter.

Quite a feature in January was the visit to San Francisco of the great Hamburg-American steamer Cleveland, which is carrying a great company of tourists on a trip around the world. It was said that the last berths sold at \$3000 for the trip. The steamer came up the west coast of South America, and the tourists proved good flower buyers. John R. Sievers reports \$280 as his part of the trade.

For many years Sievers & Boland,

San Francisco, were headquarters for the best Carnations and Roses, for Sievers was a famous grower. Since the fire both members of the old firm are represented in the trade by sons, each of whom have very nice stores, the Mr. Boland at 60 Kearney st., and John R. Sievers at 201 Powell st., both in the heart of the new retail districts.

A very large part of the flowers are sold direct to the florists by the growers, yet the wholesale trade is represented by E. W. McLennan & Co., large growers at Burlingame, and the Domoto Bros. who are now established very centrally at Lick Place, hardly two blocks from the city's center.

I note present prices of Bride, Liberty and Killarney Roses are \$1.50 per 100 for the best, and American Beauty \$4 for best. CARL PURDY.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co. Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the offices is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12.
Boston: Robert Cameron, Cambridge, Mass.
Philadelphia: A. H. Secker, 306 Wood Building, No. 34 So. 16th St.

Yearly Subscriptions.—United States and Mexico, \$1.00, Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Order; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

That Condensation Can be Stopped

Editor The Florists' Exchange:

I notice the letter of H. J., Md., in a recent issue. If he would use Asbestos Protected Metal, sample of which I herewith enclose, he no doubt would do away with all condensation. We would be glad to communicate with him.

ASBESTOS PROTECTED METAL Co.
New England Bldg., Cleveland, O.

Why Not Handle Seeds as Well?

This present issue furnishes clear and unmistakable evidence of the close business relationship already existing between the seedsmen and the florist, and with this demonstration in full sight we wish to urge an undertaking which has often been on our mind and for mention of which we have been waiting just the favorable opportunity our novelty edition presents.

We have under notice the success of a certain firm of florists located less than thirty miles from this metropolis, which every Spring transacts a large and remunerative business in seed selling, customers driving up to this establishment often from ten miles away to make the purchases for their vegetable and flower garden.

Now, why do these people come to this florist firm instead of buying direct from any of the seed houses whose catalogs they probably receive? They could order direct from New York, or any other city, and have the seeds delivered at their door or at their local post office without bothering to harness up and lose from an hour to half a day of their time.

The solution is simple. They come to this particular firm not solely because they know it handles reliable seeds but because they can ask questions as to this or that variety best adapted to their particular needs and be sure of receiving intelligent answers; just as intelligent as they would receive from the clerk behind the counter of that seed store whose catalog they are buying from, with the added interest in their welfare which personal acquaintance only can impart.

What is done by this particular firm of local florists and growers can be taken up by hundreds of others in the trade similarly situated.

We would advise all who wish to add to their incomes, and who do not despise the day of small beginnings, to make a connection with one or more reputable seed houses, study their catalog thoroughly, so as to become familiar with types, qualities and season for each, and tack up a sign "Reliable Seeds Sold Here."

Some seedsmen may think we are advising florists to cut into their (the seedsmen's) business, not so, for in a locality where was sold but one packet previously, there will soon be noted increasing demand; the indifference of the florist with his knowledge of plant life will sell seeds where they never were sold before, and the contagion of prosperous kitchen garden and attractive flower border spreads in ever enlarging circles.

Nor will this be the only benefit to the florist. Customers who come for seeds will often buy flowers, and opportunities for planting, attending to gardens, with some occasional landscape work thrown in, will add sensibly to the returns to be had through a well conducted business.

Our Novelty Edition for 1910

Incorporated in this issue are thirty-two pages of the Novelties and Specialties offered by seedsmen, florists and others for the year 1910.

While this presentation is not as complete as we should like to have seen it, it will, we trust, be considered as fairly representative at this early stage of the idea.

Later, as the value of our annual Novelty Editions is better realized on the part of those most vitally concerned, we have no doubt whatsoever but that it will necessitate the use of many more pages than thirty-two to give space to the introductions it is desired to be listed.

The seed, the nursery and the florist industries are far more closely related than the unobservant man may possess an idea of. The publishers of The Florists' Exchange, understanding full well how the one may work into the other, have inaugurated this compilation for the purpose of drawing more general attention to the community of interests existing between all three.

Each particular one has all the world for its clientele, but hitherto the world of the seedsmen and the world of the nurseryman has afforded greater scope than that of the florist; in other words, the business of the average florist is more local than that of his confreres.

There is no body of men more fitted, and no class better qualified to handle seeds than are the florists; there are any number of firms in this line so situated that they could take up the handling of seeds to their great financial advantage.

We have by no means reached the limit of seed selling, nor is the movement of nursery stock as large as it might well be; great as both these interests appear today, in all probability they do not amount to one tithe of the proportions they will assume twenty-five years from now; in fact, at that future date those who look back on today will feel that the business of 1910 was comparatively small indeed.

This is why we would like to see every florist take up the handling of seeds who can, thus placing himself in a position to profit by the undoubted augmentation of that particular business as it develops with the advancing years. And to encourage this development is one of our principal reasons for the present week's presentation.

The High Cost of Living

The Federal and Civil authorities, from President Taft and Secretary Wilson, down to Washington's most humble day laborer, are mutually interested in trying to solve the very knotty problem of the high cost of living, and if possible to reduce the scale of prices to an equitable wage-earning basis.

As the chief source of our supply comes directly from the soil, it would, naturally, suggest the kindly interest of our esteemed Secretary of Agriculture; and surely if a clear solution is obtained, coming through whomsoever's efforts it may, no greater beneaction could be bestowed upon the public at large. Three specific reasons have already been advanced, viz.: the increased cost of production; the increased population, and the abandonment of agricultural pursuits for those of the cities with higher wages and shorter hours. These conditions, which have been growing steadily worse for the past five years, seem now to have reached a sudden crisis, the awful abyss over which either the prices or those who pay them must drop, hence the investigation in Congress. First to take cognizance of the impending danger is the meat supply which, submissively and without argument, reduces its cost to the consumer from 5 to 10 cents per pound. Is not this significant? Then what about the staff of life coming from the agricultural kingdom? What of the vegetable producer? If he receives the allotted share for his labors, prices proportionate to those paid by the consumers of his various products, is it reasonable to say he would willingly give up such an occupation to seek the seclusion of city life with curtailed liberties?

In the early part of the present century when William Scott Carnations were so generally grown no complaint was made by the grower, either as to prices received, or the amount of necessities obtainable therefrom. Take conditions today: Carnations have not only maintained their popularity, but have greatly increased in favor, surpassing all expectations of the older disseminators, yet the coal with which they are produced costs the small grower 200% more than formerly.

The cost of labor, building materials, and all accessories have increased, yet the grower receives practically the same prices for his output.

While our worthy President, Secretary of Agriculture, and other officials are conducting this important investigation, would it not be well to also look into the matter of our local welfare in the matter of increased taxation?

To be brief and cite an actual instance: In 1903 the realty tax, which for years had fluctuated between \$25 and \$50 a year, was raised to \$110 without warning, and without a single improvement which might justify such an action.

Greenhouses, assessed as improvements on real estate, came under this general head, and were again assessed, in part or as a whole, as personal property. Our best wishes for success attend our most worthy officials; may they succeed in their efforts.

JAS. L. CARBERRY.

Cultivation of the Poinsettia

A Paper read before the Morris Co. (N. J.) Gardeners and Florists' Society, Madison, N. J., Feb. 9, 1910, by H. B. Vyse.

I have been asked by our worthy secretary to read a paper on the "Cultivation of the Poinsettia," but I must tell you I do not profess to be any great authority on this particular subject.

Doubtless you are aware that the Poinsettia is limited to a few varieties. I will not go into detail with regard to names as there are some I am not acquainted with, especially the more recent introductions. I will, therefore, turn my attention to the one most useful to the private gardener and also for commercial purposes, namely, Poinsettia pulcherrima. It is almost indispensable for Xmas decorations, and in my opinion every gardener should grow a few plants for that purpose. I will take this subject up from the resting period, and will endeavor to give you a brief outline of my method of cultivation, although it may differ perhaps from the usual course pursued by some growers. I may say, I have never resorted to the planting out system in benches, although I believe a good many are grown that way for cut flower purposes, so I will follow the pot culture. The resting period begins about the first week in January and lasts until the early part of May. The plants are cut back to within about 2 ft. from the pots and then are turned over on their sides, water being withheld all the time. I place them under the Carnation benches and there they remain until I start them in May. Then I usually place them under the Rose benches, as near the path as possible, that they can get all the light, giving them a good soaking with water, and syringing them overhead two or three times each day. In two or three weeks the first batch of cuttings can be procured.

I prefer cuttings about 2½ to 3 inches long, taken with a little old wood, or heel, as is the term often used by gardeners. There are other methods that can be resorted to, if the stock of old plants is limited. One is cutting up the old stems in the same manner you would make vine eyes; another way is by cutting up the stems into lengths, so that one eye is above the sand. It is advisable when taking cuttings to have close at hand a little powdered charcoal and dry sand, in which to insert the cuttings directly they are taken off, to stop the sap from flowing. Get the cuttings into the sand as quickly as possible, so as to avoid flagging; give a good watering and shade with some papers.

I find the Poinsettia very easy to root, and by making a succession of strikings one can have plants ranging from one foot to six feet in height.

Under favorable circumstances cuttings will be rooted in about three weeks; do not leave them in the sand, for the roots to become more than an inch long, otherwise they will in all probability get damaged when being potted. For the first potting prepare a fairly light compost, using a small quantity of sand, leaf soil and loam, well mixed. Place the young plants in a shaded part of the house, and as soon as they are rooted sufficiently to stand the sun place them in the full sunlight. When ready, give them a shift into larger pots, making the compost heavier with loam and very little sand, just enough to keep the soil open. Pot firmly. By the early part of August the plants will take their final shift into 5 and 6-inch pots. I use all loam with a small quantity of bone meal and Scotch soot well incorporated into the soil. When potting, use the rammer freely and pot firmly. In my opinion that has a tendency towards helping the plants to hold their foliage longer than if loosely potted. Always be very careful to ensure that they have plenty of water, for if left to get dry and flag in the hot sun the result will be a good crop of scorched foliage. Spray the plants overhead several times a day during bright weather.

Some have the idea that the Poinsettia needs high feeding. That I find is a mistake. Two applications of Clay's Fertilizer at intervals of two weeks is ample to finish off good bracts, say from 14 ins. to 19 ins. across in 5 and 6-inch pots.

The Poinsettia is not very susceptible to the ravages of insect pests, mealy bug being the worst enemy. Even that can be ward off if a careful watch is kept to prevent them gaining any headway, by occasional sprayings of K. L., all Insecticide, or Aphine.

New Daisy Frau F. Sander

The firm of F. Sander & Sons of Bruges, Belgium, who introduced from Africa the very popular Daisy Queen Alexandra, and its two later varieties, Pink Queen Alexandra and Perfection, is promising another African Daisy, which they think will be one of their most popular importations, according to the description given in Moeller's Deutsche Gärtnerei-Zeitung. The flower of this novelty, which has been named Frau F. Sander, is double and pure white, without any yellow center, and very large, often 3½ ins. in diam. The plant grows easily and quickly and blooms profusely. A group of these Daisies, covered with their mass of flowers, is one of the loveliest pictures imaginable. Its season is a long one, and it will also flower in Winter. Its habit is compact, yet light, the leaves are very delicate, and the cut flowers will keep for four weeks. "There is hardly another plant that may be used for so many purposes as this Daisy. It is equally valuable for Summer bedding and borders, for pot culture, for window boxes or as a cut flower; in short, it is adapted to the most varied purposes, both in Summer or Winter. This double, large, snowwhite, profusely blooming and freely growing Daisy is without a rival."

OUR READERS' VIEWS

Gladiolus Society Wanted

Editor The Florists' Exchange:

That Gladiolus grower who guessed that the variety known under the various names of "Rochester," "Gad," and later "Independence," was identical with Mrs. Francis King, and substituted it for that sort, builded worse than he knew. When shall we organize a Gladiolus society and compel introducers to have their novelties certified? Or, shall we wait until some enterprising member of the Legislature or of Congress secures a law which makes it a penal offense to send out one variety under the name of another. J. C. VAUGHAN.

American Grown Bulbs Satisfactory

Editor The Florists' Exchange:

Having seen several unfavorable criticisms in regard to Southern bulbs, we think it no more than justice to the growers to state our experience with them. We were induced by our commission man, Mr. Jno. W. McIntyre, Philadelphia, to buy ten thousand bulbs of Golden Spur from Poat Bros., Richmond, Va., and would say that the percentage of bloom, together with the prices obtained, made it a satisfactory venture. We were cut out before February 1.

RUTLEDGE NURSERIES.

Rutledge, Pa.

Editor Florists' Exchange:

Having recently noticed the statement of some prominent florist, published in one of the trade periodicals—I have forgotten both the name of the writer and the paper in which the statement was published—that bulbs grown in America produced flowers decidedly inferior to the bulbs purchased abroad, I desire to state that this is not always true. I purchased a small quantity of American grown Narcissus Empress last Fall for trial. They were given exactly the same treatment as foreign grown bulbs. I am now cutting flowers from both lots and the American grown bulbs are producing flowers decidedly superior to the foreign grown bulbs.

I. L. POWELL.

Millbrook, N. Y.

Of Interest to Flower Pot Manufacturers

Editor The Florists' Exchange:

Every florist has more or less trouble in keeping seed pans moist where the seed is so small (such as that of Ferns, Begonias, etc.) that it will not stand watering from overhead. I have been doing some experimenting and have invented an irrigating or self-watering flower pot in which the soil is kept moist for a long time; used as a seed pan it will take care of itself with the exception of filling the reservoir once or twice a week. This will work equally well for house plants, especially in Summer, when you have to keep going with the watering pot two or more times a day; with my pot, one filling would be plenty on the hottest Summer day.

I have applied for a patent on this and my application is accepted. As the entire pot or pan is made out of clay I would like to communicate with a pot manufacturer in order to make arrangements to put them on the market. WM. F. BEERBAUM.

Waterbury, Conn.

Budding Lilacs

Editor Florists' Exchange:

In your issue of February 19 budding Lilacs on California Privet is recommended. Why not graft at the collar, using the Privet as a stock, thus allowing the work to be done in Winter, a more leisurely time? I have had perfect success in this way, packing away the graft, the same as Apple graft, for early Spring planting. One advantage of my method is that at the end of one year the Lilac will have roots of its own above the point of union, and the Privet root may be cut away, leaving the Lilac on its own root. Another and more important reason is that the California Privet is not hardy here. I have had hundreds of Japan Tree Lilac budded on California Privet, as low down as the budding could be done, killed by the cold Winter.

We have had a long, cold Winter, though at no time the intense cold we sometimes have, and yet I noticed a month ago that two-year-old California Privet in the nursery rows were killed to the ground. Amour River, Iboia and regelianum Privets in the same soil and exposure are green and fresh to the very tips. Spiraea Van Houttei and Berberis Thunbergii are alike uninjured. Either, in my opinion, make a more desirable ornamental hedge than any Privet. I fear for the May showing of the millions of California Privet planted in the Central West, as well as for the sale of the few thousand plants I now have in storage.

E. Y. TEAS.

Centerville, Ind.

Hardiness of Chamaerops Excelsa

Editor The Florists' Exchange:

The illustration shown herewith is that of a plant of Chamaerops excelsa growing on the lawn of my little place. I thought it might interest some readers of the EXCHANGE; a part of its story will at least interest Mr. Meehan, namely, that relating to the hardiness of this Palm. This Winter has been a very severe one in California, one of the hardest ever known, the temperature dropping to 7° above zero in some places in Grass Valley. The lowest I have any record of on my place is 10° above. The picture was taken about three weeks after the record cold spell. The white spots you will notice on the grass is snow. A few years ago the EXCHANGE had a note from Mr. Meehan on the hardiness of this plant. I send this record of experience in the hope that it may help the planting of one of the beautiful things of Nature.

Grass Valley, Cal.

ABE CLEMO.

Chamaerops excelsa at Grass Valley, Cal.

Dahlia Lists

Editor The Florists' Exchange:

I have read with great interest the articles appearing in your issue of Feb. 12, written by W. W. Wilmore and W. F. Bassett, in discussing the present long list of named varieties of Dahlias.

In my opinion, we are approaching a time when we need an American Dahlia Society, run on the same principle as the American Carnation Society or the American Rose Society. Through this Society each new variety of Dahlias could be carefully judged before it is put on the market, and we could prevent the introduction and selling of worthless new varieties.

Through an American Dahlia Society we could work together in harmony and improve our collections as we may see fit without running the risk of throwing away money for useless novelties.

The Society could have a monthly report printed and distributed to all its members, and every member could help to make this report a very valuable one to the Dahlia experts of this country. In this way I think the question of how to cut out worthless varieties and make the list shorter and more valuable would gradually solve itself.

Our collection of Dahlias was carefully selected and exhibited here at the Alaska-Yukon-Pacific Exposition by fourteen different Dahlia experts, from all parts of the globe, and ought to be the finest collection obtainable. Still, we will have to improve our collection with new varieties and discard old ones as they become of age, which means a large continuous expense. If we were members of an American society of Dahlia specialists and keep each other posted on the various items of interest to the Dahlia expert we could not only save a large portion of this continuous expense, but it would make our work easier and more valuable.

Seattle, Wash.

ERNEST G. BENSON.

Society of American Florists

Registration of Begonia

Public notice is hereby given that J. A. Peterson of Westwood, Cincinnati, Ohio, offers for registration the Begonia described below. Any person objecting to the registration or to the use of the proposed name, is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

RAISER'S DESCRIPTION.—Parentage, Socotrana X a sport of Lorraine type; foliage large, round, resembling foliage of B. Socotrana, but smaller; height 1 to 1½ ft.; color, deep soft salmy pink; the individual flowers are about 2 inches across; flowering period from October to April, being at its best during the latter part of December; propagation by leaf-cuttings, or by splitting up the foliage, as with the Rex varieties; soil, a light sandy loam and leaf-mold, with a little well-rotted cow manure. Its lasting quality is especially recommended.

NAME.—Glory of Cincinnati.

Corrections

The name, "Alice of Ingleside," was omitted from the registration, on January 12, 1910, of the Rose offered by Mr. Southwick Cary Briggs of Washington, D. C. In the change of registration on January 20, 1910, by S. Cockburn & Sons of Woodlawn, New York, the name of the Chrysanthemum should have been "Mrs. Jane Cockburn" instead of "Mrs. Jane Cochran."

H. B. DORNER, Secretary.

February 17, 1910.

Roger Austin Swetland Dildine

William H. Dildine, superintendent of James Vick's Sons, seedsmen of Rochester, N. Y., has been bereft of his little son, Roger Austin Swetland, aged three years, two months and five days, who passed away on the 8th inst. The boy was a particularly winsome little fellow and his loss is severely felt.

Joseph B. Fuller

In the death of Joseph B. Fuller of Rochester, N. Y., on February 16, the seed trade has lost one of its oldest and most esteemed representatives.

Mr. Fuller was born in Brooklyn, N. Y., October 31, 1827. When he was only three years old his family moved to Rochester, coming by the Erie Canal and stopping on their arrival at the old Rochester House, corner of Exchange and Spring sts. At the age of 14 he was apprenticed to the late Henry O'Reilly to learn the printer's trade. Later he was with the Genesee Farmer, published by the late James Vick and edited by the late Patrick Barry. Being for years in close relationship with Mr. Vick in the printing office, and the two being drawn together by a mutual love of flowers, he was easily persuaded to engage in the seed business. In 1863 he entered the employ of Mr. Vick, and continued almost uninterruptedly with the Vick firm from that time until failing health about a year ago necessitated his giving up active work.

Mr. Fuller's influence in the development of the business was scarcely second to that of Mr. Vick. His whole life was bound up in the work and his energy devoted to it. For years he had pursued the study of botany, and his extensive knowledge of plants was of great advantage. His knowledge of stocks was extensive and thorough; his judgment and accuracy were without equal; and his honesty unimpeachable. To his perfect integrity and absolute reliability the success of the Vick seed business was in no small degree due. He was a thorough seedsmen, far-seeing, conscientious and accurate.

During a trip to Europe, in 1888, Mr. Fuller was invited by Messrs. Carter, Dunnett and Beale to inspect their trials of Peas. Of one particular variety his opinion was asked as to its quality. His reply was "It's a Daisy." This bit of American slang evidently impressed the famous English seedsmen, for a few years later the variety was introduced as "Carter's Daisy," and fully justified Mr. Fuller's opinion of its good qualities. His genial manner made him hosts of friends in the trade. Many a long chat, over cigars, did he and the veteran seedsmen William Meggett have in the old Vick Seed House on East avenue, in the eighties.

Mr. Fuller's geniality was one of his most prominent characteristics. He had a good story apropos to every occasion. His reminiscences of the early days of Rochester, and of the volunteer fire department of which he was a member, were particularly enjoyable. He was a member of Valley Lodge, No. 109, F. and A. M. since 1853, and Hamilton Chapter, No. 62, R. A. M. He was also a member of the Rochester Academy of Science, giving devoted attention to the work of the Botanical Section of this Society. In 1896, when the Academy published a list of the plants of Monroe County, it was difficult to find a compositor sufficiently familiar with botanical terms to set up the list in a satisfactory manner. Mr. Fuller came to the rescue, and though it was years since he had stood at the case, he set all the type for this work of more than 150 pages, a remarkable achievement for a man of his years, as well as from a typographical standpoint. He was the supreme authority on all botanical questions, and nowhere will his loss be more felt than in the Botanical Section. With his fellow workers in the seed business he was always pleasant, kind, patient and forbearing, with the old-time courtesy of manner so seldom seen now-a-days. In his death they feel that "a good man has fallen."

THE AMERICAN ROSE SOCIETY

Schedule of Premiums for the Spring Exhibition of 1910, to be held in conjunction with the Spring Exhibition of the Horticultural Society of New York, in the American Museum of Natural History, 77th Street and Central Park West, New York City, March 16, 17, 18

Division A—Pot Roses.

- Class.
- Best display of hardy Roses in bloom. All types and classes of Roses suitable for outdoor planting may be exhibited in this class. First prize \$100, offered by Hon. Philip Breitmeyer, Detroit, Mich.
 - Collection of Teas and Hybrid Teas in not less than 5 in. pots, 25 plants; first prize \$25, offered by John N. May, Summit, N. J.; second prize \$15.
 - Collection of Wichuriana Hybrids, 6 in. pots or over, not less than 25 plants; first prize \$25, offered by The F. R. Pierson Co., Tarrytown, N. Y.; second prize \$15.
 - Collection of Hybrid Perpetuals, 6 in. pots or over, not less than 25 plants; first prize \$25, offered by Welch Bros., Boston, Mass.; second prize \$15.
 - Six climbing Roses, in not less than 7 in. pots; first prize \$12; second prize \$8.
 - Six Roses, not climbing, in not less than 7 in. pots; first prize \$12; second prize \$8.
 - Twelve Baby Ramblers, any variety, in not less than 4 in. pots; first prize \$6; second prize \$3.
 - Specimen in pot or tub, not climber; first prize \$5; second prize \$3.
 - Specimen Crimson Rambler in pot or tub; first prize \$10; second prize \$5.
 - Specimen Lady Gay in pot or tub; first prize \$10; second prize \$5.
 - Specimen Hiawatha in pot or tub; first prize \$10; second prize \$5.
 - Specimen Newport Fairy in pot or tub; first prize \$10; second prize \$5.
 - Specimen Dorothy Perkins in pot or tub; first prize \$10; second prize \$5.
 - Specimen Tausendschon in pot or tub; first prize \$10; second prize \$5.
 - Best collection of Hybrid Wichuriana novelties, not disseminated, five or more plants, in pots or tubs. Prize \$25, offered by Ellwanger & Barry, Rochester, N. Y. The best variety in this collection may receive the Society's silver medal; second best a bronze medal, if considered worthy.

Note. All plants in these classes to be correctly labeled. No exhibit will be awarded a prize unless in the opinion of the judges the same shall be deemed worthy.

Division B—Teas and Hybrid Teas. Twenty-five Cut Blooms. Open to All.

- Class.
- For the best American Beauty, stems not less than four feet or more than six feet; first prize \$15, offered by Arthur T. Eddington, New York City; second prize \$10.
- In classes 108 to 129 the Prizes are, in each class, first prize \$10, second prize \$5. The varieties are as follows:
- Class.
- Bride. First prize offered by A. H. Langjahr, New York City.
 - Bridesmaid.
 - Kaiserin Augusta Victoria.
 - Cardinal.
 - Rhea Reid.
 - My Maryland. First prize offered by L. B. Codding, Murray Hill, N. J.
 - Mrs. Jardine.
 - Souv. du President Carnot.
 - Perle des Jardins.
 - Bon Silene.
 - Golden Gate.
 - Mme. Abel Chatenay.
 - Mrs. Oliver Ames.
 - Ivory.
 - Liberty.
 - Sunrise.
 - Wellesley.
 - Killarney. First prize offered by Walter F. Sheridan, New York City.
 - White Killarney.
 - Richmond. First prize offered by Wm. C. Badgley, Chatham, N. J.
 - Uncle John.
 - Any other named disseminated variety.

Note. Any variety not named above may be shown in Division B, and first and second prizes may be awarded to each variety shown, at the discretion of the Judges. Entries are unlimited.

- For the largest and best collection of Teas and Hybrid Teas, 6 or more varieties, not less than twelve flowers of a kind; first prize \$30, offered by Robert Simpson, Clifton, N. J.; second prize \$20.

Division C—Twelve Cut Blooms. Open to Private Gardeners and Amateurs Only.

- American Beauty, stems not less than four feet or more than six feet; first prize \$8; second prize \$5.
- In classes 150 to 170 the prizes are, in each class, first prize \$4; second prize \$2, and the varieties are:

- Class.
- Bride.
 - Bridesmaid.
 - Kaiserin Augusta Victoria.
 - Mrs. Piermont Morgan.
 - Souv. du President Carnot.
 - Perle des Jardins.
 - Bon Silene.
 - Mrs. Oliver Ames.
 - Ivory.
 - Safrano.
 - Golden Gate.
 - Mme. Abel Chatenay.
 - Liberty.
 - Sunrise.
 - Mrs. Jardine.
 - Cardinal.

- Rhea Reid.
- My Maryland.
- Marchal Neil.
- Any other named disseminated variety.

Note. Any variety not named above may be shown in Division C, and first and second prizes may be awarded, at the discretion of the Judges. Entries are unlimited.

- For the best and largest collection of Teas and Hybrid Teas, six of a kind; first prize \$12; second prize \$6.

Division D—Hybrid Perpetuals. Stems not less than twelve inches.

- Open to all. Prizes are, first \$25, second \$15.
- For the largest and best collection, not less than twelve varieties, or less than three of a kind.

Division E—Hybrid Perpetuals. Stems not less than twelve inches.

- Open to private gardeners and amateurs only. Prizes are first \$10, second \$5.
- For the largest and best collection, not less than six varieties or less than three of a kind.

SPECIAL PRIZES.

Division F.

- For the best 50 Bridesmaid, \$25 offered by William F. Kasting Co., Buffalo, N. Y.
- For the best 50 Mme. Abel Chatenay, \$25 offered by Traendly & Schenck, New York City.
- For the best 50 The Bride, \$25 offered by the King Construction Co., No. Tonawanda, N. Y.
- For the best 50 Mrs. Jardine, \$25 offered by Robert Scott & Son, Sharon Hill, Pa.
- For the best 50 American Beauty, \$25 offered by J. A. Budlong Sons Co., Providence, R. I.
- For the best 36 My Maryland, \$15 offered by John Cook, Baltimore, Md.

- For the best 6 Roses, American Beauty excepted, two to be white and four to be red, pink or yellow. This means that the number of varieties must be at least two and may be as many as six; and that two Roses, and only two, are to be of any white, or near white, variety, the other four of any colored variety, except Am. Beauty. Length of stem is limited to only one joint. Solid silver cup, offered by Moore, Hentz & Nash, New York City.
 - For the best vase of Roses, not less than 25 or more than 50 blooms, one or more varieties, arranged for effect, accessories in other flowers, foliage and also ribbons allowed. Exhibitors may supply their own vases. First prize \$15, second prize \$10, offered by Peter Henderson & Co., New York City.
 - For the best plant in bloom of the Rose American Pillar, \$4 offered by The Conard & Jones Co., West Grove, Pa.
 - For the best 6 Cut Sprays of the Rose American Pillar, \$4 offered by The Conard & Jones Co.
 - For the best 6 plants in bloom of the Rose Harry Kirk; first prize \$5, offered by Henry A. Dreer, Philadelphia, Pa.; second prize \$3.
 - For the best plant in bloom of the Rose Charles Dingee; first prize \$4, offered by The Dingee & Conard Co.; second prize \$2.
 - For the best 6 blooms of Rose Charles Dingee; first prize \$4; 2d, \$2.
 - For the best 25 Richmond; first prize \$10; second prize \$5; offered by Stumpff & Walter Co., New York City. Open to private gardeners only.
 - For 50 blooms of Rhea Reid, first prize \$25, offered by the E. G. Hill Co., Richmond, Ind.
- For the best vase of cut blooms showing the highest score, the Lord & Burnham Co., gold medal, value \$25, offered by the Lord & Burnham Co., Irvington, N. Y. This award to be in addition to any other premium the exhibit may have secured.
- The Society of American Florists' silver medal may be awarded for the best grown Rose plant, or group of plant, should there be an exhibit of sufficient merit.
- For the most artistically arranged vase on exhibition, first prize The Toronto Horticultural Society's silver medal; second prize the same Society's bronze medal. This award to be made before any other judging is done. Entries in Class 192 will be deferred.

NOTE: In classes, 2, 3, 4, 107, 108, 113, 125, 127, and 130, the second prizes are offered by the American Rose Society.

A Big Cup for Six Roses

One of the prizes to be offered at the Spring Show in New York of the American Rose Society is a \$50 solid silver cup. It is for the best display of six Roses. The donors are the New York firm of Moore, Hentz & Nash. This award is unique, because it is a generous one for a small exhibit—an exhibit so small that a grower with the smallest establishment will have his chance to compete. The restrictions are unusually few; excepting American Beauty, any Rose of any variety is eligible. To illustrate: one man may show two white and four pink Killarneys. Another man's six may comprise six varieties, say one Bride, one Cornelia Cook, one Perle, one Golden Gate, one Richmond and one Souvenir d'Un Ami. Another six may be all Hybrids; perfectly proper, so long as two are white ones, or near-whites, and the rest colored kinds. Bon Silene and Niphetos in one exhibit may find themselves pitted against Ulrich Brunner and Merveille de Lyon in another. The judges will recognize each variety and judge each flower on its own merits. The entertainment is for the visitor and not for the judges.

The donors seek to add variety and interest to the show as a whole, by introducing a new department devoted to *assemblage* of various kinds and various colors in each six. They hope to see a number of exhibits in this section of the show; and because of the assured diversity of colors and of the freedom allowed as to sorts, there should be every reason to expect a display affording entertaining contrasts both in the exhibits and between them. In this way the more scientific arrangements of all the other exhibits will have an offset to their large and solid masses of uniform and standard colors in the picturesque and diverse mass of kinds entered for this one of the several cups. The good grower in a small place has here a chance against the large grower, and it is hoped that all good growers will bring sixes.

Here will be a medley of specimens in contrast to the uniformity which is the feature of the rest of the show. It is intended to excite comment, to afford pleasure and instruction and to produce a small "War of the Roses." The exact specification for this exhibit will be found in the official Schedule of Premiums of the American Rose Society for 1910, Division F, Class 190.

The Verbena

It is curious to note that this flower does not hold anything like the position it did some 40 years ago in this country; at that time, Verbenas were a craze, particularly for exhibition work. Henry Eckford was one of the foremost raisers, and his seedlings were very much stronger and healthier than the stocks existing prior to his taking them up. This was due to the fact that he treated them more rationally, not coddling them under glass year in and year out. They went out of fashion, however, and some nine or ten years ago, the old Sweet Pea raiser and I had a long chat about Verbenas; Mr. Eckford expressed the view that Verbenas fell out partly through a change in the styles of bedding, and also because people got tired of tending to the delicate named sorts when very good strains could be raised from seed. Another old florist, now dead and gone, assured me that the finest Verbena in commerce, named or unnamed, in the year 1900, was veriest rubbish compared with the named sorts he grew some 30 years before, and some notes and prints I have by me tend to make me believe such was the case.

Henry Eckford was of much the same view and he also expressed a doubt as to there being one of the old Verbenas left, a fact that caused him some regret.

I feel sure that this view was correct as far as this country was concerned, but several years ago, Mr. Dillon of Bloomsburg sent me his list, and if I remember rightly I therein found several old sorts which were referred to by writers in the antiquated notes I have by me. The statement by L. H. D. that Mr. Dillon had for more than 30 years specialized in Verbenas serves to make it pretty certain that some of the old English florists' Verbenas still survive in America, and it is a matter of regret to me that I was not aware of this some ten years ago.

Named Verbenas are, however, gaining ground in this country for, in recent years, several fine colored sorts have been sent out. They are mostly cultivated in pots, however. H. B. May & Sons, the great Fern growers of Edmonton, are large cultivators of the pot Verbena for market work. Despite this, it is doubtful whether this flower will ever attain the popularity of the past. There are so many rivals, many of which require but little Winter attention, and further the average gardener is content to grow Verbenas from seed because he is assured that seedlings are healthier than propagated stock.

ROSES

WHITE KILLARNEY

(Waban Strain)

White Killarney has most successfully advertised itself. Like its parent, the Pink Killarney, it has become one of the most popular Roses grown today. As an all the year round white it has no equal. It has proved all that its best friends ever claimed for it, both in quality and productiveness. It was a standard from the first.

Grafted Stock: \$2.00 per doz., \$15.00 per 100, \$120.00 per 1000.

Own Root Stock: \$1.50 per doz., \$8.00 per 100, \$75.00 per 1000.

MY MARYLAND

Among the newer varieties of Roses there is none more worthy of consideration than this. The pleasing shade of pink which attracts the patrons of the retailer and its wonderfully productive ability make it a general favorite. As a commercial proposition My Maryland has made good.

Grafted Stock: \$2.00 per doz., \$15.00 per 100, \$120.00 per 1000.

KILLARNEY

The finest pink Rose grown today, for commercial purposes.

Grafted Stock: 2 1/4-inch pots, 20c. each, \$2.00 per doz., \$15.00 per 100, \$120.00 per 1000.

Own Root Stock: 2 1/2-inch pots, \$1.00 per doz., \$5.00 per 100, \$45.00 per 1000.

STANDARD VARIETIES

Betty, Bon Silene, Bride, Bridesmaid, Enchanter, Etoile de France, Franz Deegen, Gen. McArthur, Golden Gate, Hermosa, Ivory, Kaiserin Augusta Victoria, Kate Moulton, Killarney, La Detroit, Marechal Neil, Mme. Abel Chatenay, Mme. Hoste, Mrs. Jardine, Mrs. Pierpont Morgan, Papa Gontier, Queen Beatrice, Rhea Reid, Rosalind Orr English, Richmond, Souvenir de Wootton, Uncle John, Wellesley.

Grafted Stock (Selected Plants)

Each 20c., \$2.00 per doz., \$15.00 per 100, \$120.00 per 1000.

Special prices will be quoted on 5000 or more.

Own Root Roses

We have to offer an exceptionally fine lot of early propagated Own Root Roses in the leading commercial varieties and this stock we can guarantee to be clean, healthy and in vigorous growing condition when shipped.

Killarney	Uncle John
Bride	Kaiserin Augusta
Bridesmaid	Victoria
Ivory	Richmond
Golden Gate	Mme. Abel Chatenay

2-inch: 75c. per doz., \$4.00 per 100, \$35.00 per 1000.

2 1/4-inch: \$1.00 per doz., \$5.00 per 100, \$45.00 per 1000.

3-inch: \$1.50 per doz., \$7.00 per 100, \$60.00 per 1000.

Special prices will be quoted on 5000 or more.

American Beauty

Own Root Stock: From 2 1/4-inch pots: \$8.00 per 100, \$75.00 per 1000. 3-inch pots: \$12.00 per 100, \$100.00 per 1000.

Special prices will be quoted and plants grown to order when 4-inch or larger sizes are wanted.

Chrysanthemums

Our list of Chrysanthemums is made up of the best of the older Standard Commercial Varieties, and of the recent introductions. We have selected for our use only such varieties as are of the highest Commercial value.

NEWER VARIETIES

For immediate delivery.

Gloria	Patty
President Taft	Dolly Dimple
Mrs. W. E. Kelley	Merry Jane

Rooted Cuttings: \$1.50 per doz., \$8.00 per 100, \$75.00 per 1000.
Plants from 2 1/4-inch pots: \$1.50 per doz., \$10.00 per 100, \$90.00 per 1000.

CHOICE VARIETIES

Virginia Pochlmann	Golden Chadwick
Golden Eagle	

Rooted Cuttings: 75c. per doz., \$4.00 per 100, \$30.00 per 1000.
Plants from 2 1/4-inch pots: 75c. per doz., \$5.00 per 100, \$40.00 per 1000.

STANDARD VARIETIES

The following list we believe to be the best list of Standard Commercial Varieties ever offered to the Trade.

WHITE

Early. George S. Kalb, Polly Rose, Early Snow, October Frost, Ivory, Clementine Touse.
Mid-Season. Mrs. Clay Frick, Mrs. H. Robinson, Beatrice May, Alice Byron, Miss Mianie Wanamaker, White Cloud.
Late. Mrs. McArthur, Timothy Eaton, W. H. Chadwick, J. Nonin, Money-maker.

PINK

Early. Glory of the Pacific, Rosiere, Pacific Supreme.
Mid-Season. Pink Ivory, J. K. Shaw, A. J. Balfour, William H. Duckham, Morton F. Plant.
Late. Maud Dean, Mayor Weaver, Dr. Enguehard.

YELLOW

Early. Monrovia, Golden Glow, Crocus, Comolita.
Mid-Season. G. Pitcher, Col. D. Appleton, Mrs. Wm. Duckham.
Late. Major Bonnaffon, H. W. Reiman, Yellow Eaton, Mrs. E. D. Smith, Nagoya.

RED

Cullingfordi. Merstham red.
Rooted Cuttings: 5c. each, 50c. per doz., \$2.00 per 100, \$15.00 per 1000.
From 2 1/4-inch pots: 5c. each, 50c. per doz., \$3.00 per 100, \$25.00 per 1000.

To aid in avoiding misunderstandings, customers, in ordering, will observe the following rules: Four varieties may be used in making up one dozen.

Four varieties may be used in making up one hundred.

Five varieties may be used in making up 250, and 250 will be sold at the 1000 rate; this rule applies to grafted and own root Roses and Chrysanthemums.

POMPONS

The Pompon Chrysanthemum for cut sprays has been in great demand, and the demand is bound to increase. We are ready to help you meet the demand, by supplying you stock of the best varieties.

Baby Margaret

We have a large stock of this dainty white Pompon, and no mistake is made in planting this variety where white Pompons are in demand.

Plants from 2-inch pots: \$1.00 per doz., \$4.00 per 100, \$35.00 per 1000.

Pompon Anemone

Garza. The well-known white variety; considered the best variety in its class.

From 2-inch pots: 5c. each, 50c. per doz., \$3.00 per 100, \$25.00 per 1000.

Standard Pompons

WHITE	PINK	YELLOW
Lula	Eleganta	Baby Klondike
Queen of Whites	Alma	Quinola
Nio	Alena	Zenobia
Magnificus	Acto	Sunshine
Jas. Boone		Lodi
		Savannah

From 2-inch pots: 5c. each, 50c. per doz., \$3.00 per 100, \$25.00 per 1000.

Bedding Plants

When in want of Bedding Plants we are in the market to supply them. No order will be too large for us to fill if given in season and we can guarantee the stock to be satisfactory.

COLEUS

Verschaffeltii	Lord Palmerston
Fire Brand	Queen Victoria
Golden Queen	Beckwith's Gem

Rooted Cuttings by express: 75c per 100, \$6.00 per 1000. Out of 2 1/4-inch pots, in May: \$2.50 per 100, \$20.00 per 1000. Less than 250 of a variety will be charged at the 100 rate.

Golden Bedder	Messey. Dwarf.
Hero	Pearl of Orange

Rooted Cuttings by express: \$1.00 per 100, \$7.50 per 1000. Out of 2 1/4-inch pots: \$2.50 per 100, \$20.00 per 1000. Less than 250 of a variety will be charged at the 100 rate.

Fancy Varieties. A very fine assortment of twelve kinds not listed above.

Rooted Cuttings: \$1.00 per 100, \$7.50 per 1000. Out of 2 1/4-inch pots: \$2.50 per 100, \$20.00 per 1000.

Fancy Varieties. either rooted cuttings or plants from 2 1/4-inch pots, our selection, 250 at the 1000 rate.

Miscellaneous Plants

Ageratum

Stella Gurney. Dwarf blue. 75c. per 100, \$6.00 per 1000.
Princess Pauline. A combination of blue and white in same flower. 75c. per 100, \$6.00 per 1000.

Salvia

S. splendens. Tall standard, one of the best. Rooted cuttings, 75c. per 100, \$6.00 per 1000.
S. Bonfire. Medium dwarf, very good. Rooted cuttings, 75c. per 100, \$6.00 per 1000.
S. Zurich. Dwarf; an excellent variety. Rooted cuttings, 75c. per 100, \$6.00 per 1000.
S. Schenley. Medium dwarf; very highly colored. One of the best. Rooted cuttings, 75c. per 100, \$6.00 per 1000.

Salvia of these varieties from 2 1/4-inch pots, April and later delivery, \$2.50 per 100, \$20.00 per 1000.

250 of a variety or in assortment as ordered at the 1000 rate.

German Ivy

Rooted Cuttings: 75c. per 100, \$6.00 per 1000. From 2 1/4-inch pots, \$2.50 per 100.

Stevia

The dwarf variety only, this being the most profitable for commercial uses. Rooted cuttings, February and later, 75c. per 100. From 2-inch pots, \$2.50 per 100.

NOVELTY SPENCER, or ORCHID-FLOWERING SWEET PEAS

George Stark F. F. C. and Silver Medal, 1908, England National Sweet Pea Society's Trials, Reading; F. F. C., Wolverhampton; F. F. C., Norwich. This variety is the finest scarlet pea yet in commerce. The flower is bold and has extraordinary substance. The standard is nicely waved and upright, but owing to the thickness of the petal is not so crinkled as some of the Spencers. Both for exhibition and decorative purposes it is good, also stands the sun perfectly. Pkt. 20c., 6 for \$1.

Marie Corelli The large flowers are brilliant rose-carmine or red, uniformly of true Spencer form. The wings are a pure, rich rose-carmine, while the standard shows a tint of cherry red. The whole effect is that of a brilliant crimson, clear, distinct and most beautiful. The standard is large, round and wavy; the wings are full and inclined to remain boldly outright instead of drooping. The long strong stems usually bear four flowers each. Pkt. 20c., 6 for \$1.

Senator Spencer Although this variety belongs in the darker colored class, the lighter background gives a mass of the blooms a sort of heliotrope tint, which is very pleasing. The color is a varying combination of deep claret and chocolate, striped and flaked on a ground of light heliotrope. **SENATOR SPENCER** is of the true Spencer form, wavy edges on both standard and wings; large, round, fluffy standard, long drooping wings. Both standard and wings are marked with the same colors and in the same way, with a tinge more of the wine shading in the wings. Pkt. 20c., 6 for \$1.

Miriam Beaver Its novelty is its color—a glowing but soft apricot, tinted, shaded and suffused with lemon. It is a color difficult to describe, and might be said to approach a terra cotta tint, especially so as it harmonizes so beautifully with golden brown. Pkt. 20c., 6 for \$1.

W. T. Hutchins Is a fine bold, true Spencer of most perfect form and coloring. The buds show a decided buff color. The fully expanded color has the appearance of light apricot (distinctly lemon at the throat), overlaid with a beautiful bluish pink. Both standard and wings are wavy, ruffled and crinkled of the most advanced Spencer type. The flowers are of the largest size, the standard measures 2 inches across by 1 1/2 inches deep. Pkt. 20c., 6 for \$1.

Picotee A lovely new and distinct variety. Spencer form. Flowers white, beautifully edged carmine, large and well waved. In most cases flowers are borne four on a stem, well placed and of grand substance. Pkt. 20c., 6 for \$1.

Snowflake A grand white variety of the Spencer type, described to us by the originators as an improved white Spencer. Immensely floriferous, sturdy and strong grower, with an average of four flowers to the stem. Pkt. 15c., 2 pkts. 25c., oz. 40c., 1/4 lb. \$1.50, lb. \$5.

Collection, one packet each of the above seven grand novelty Sweet Peas for \$1.25, 6 collections for \$7.25, 12 collections for \$14.

ARTHUR T. BODDINGTON

Seedsman 342 West 14th St., NEW YORK CITY, N. Y.

Please mention the Exchange when writing.

Bernardsville (N. J.) Hort. and Agri. Society

The Bernardsville Horticultural and Agricultural Society held its regular monthly meeting on Saturday, February 19. It was decided at this meeting that the executive committee, composed of the following superintendents, C. McRae, D. Neill, A. Dupanier, L. Corbett, S. Kagan and W. Mason should prepare a preliminary schedule for the next exhibition, which is to be held on September 14. There have already been donated for this exhibition two silver cups and several money prizes. J. H. Rainsbury, the local florist, had on exhibition, a well grown vase of Christmas Pink and Boddington's Snowbird Sweet Peas, of which he gave an interesting and instructive description, with notes on the growing and care of same under glass, for which the Society tendered him a hearty vote of thanks. J. Southerland and F. Heremans were duly elected active members and W. Wilshey, C. Kudack, W. Blazure, H. Wright, J. Westcott and G. S. Voorhees were proposed for active membership. The way the members are coming in, the Society promises to become a very strong one. J. F. A.

Notes

DIGHTON, MASS.—The greenhouse of John Taves, Brook st., was partially destroyed by fire on Feb. 15. He will rebuild.

PLAINWELL, MICH.—The Hastings Greenhouse Company has completed its new greenhouses and are ready to do business.

EIGHTH AVENUE, N. Y.—Hubert Green has bought property at Rhinebeck and expects to start in business as a Violet grower shortly.

WAKEFIELD, R. I.—The greenhouse on the property of Edward L. Walsh which was burned has been rebuilt, being considerably enlarged.

SOUTH MEMPHIS, TENN.—H. C. Murray, a horticulturist, residing here, was held up at the points of revolvers by two white men on Latham avenue near Kerr on the night of Feb. 15 and robbed of \$27.

LITTLE ROCK, ARK.—P. H. Pattee, florist, has returned, February 18, from a trip to Europe. A month previously he was notified that his father was critically ill in Germany, and he rushed to the parental bedside, to find him recovered.

SPRINGFIELD, O.—Gustav Schneider, florist, was one of the largest sufferers from the recent heavy snow. The roof of his new greenhouse in Johnstone avenue gave way under the weight of the "beautiful," causing a loss of about \$300. It was also thought that his crop of plants was destroyed, but Mr. Schneider states the snow stopped up the holes caused by the glass breaking and that the plants were saved.

CHESTER, PA.—A hurried message brought Melchor E. Pierce, a florist, from a nearby cigar store to his home on the evening of Feb. 15, and as he neared the greenhouses a bright light in the main building gave him the impression that the structure was in flames. Throwing off his coat Pierce started for the place and fell exhausted from shock and overexertion. He found that the lights were from seventy-two candles, the lighted tapers having been arranged amidst a floral design surmounting a huge cake, and represented the seventy-two years of Pierce's life in commemoration of his birthday, the design being secretly arranged by several friends.

Plant Culture

By GEO. W. OLIVER.

Propagator to the Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C.

New, revised and enlarged edition, fully illustrated, handsomely printed on enameled paper and bound in vellum de Luxe cloth, 12 mo., 300 pages. Sample pages on application. "Purely an American book by an American author."

The Book of Books for the Grower. Compact, concise, practical, containing all the information bearing on present day practice. You need it for yourself, for your foreman, for your men.

SPECIAL OFFER

To New Subscribers or to Subscribers Renewing: The Florists' Exchange two years and one copy of Plant Culture by mail, postpaid, \$3.00.

To Present Subscribers: Plant Culture postpaid, per copy, \$1.00.

Positively, Plant Culture will not be sold to non-subscribers at less than \$1.50 per copy.

THE FLORISTS' EXCHANGE, P. O. BOX 1697 NEW YORK

Violets Marie Louise and Farquhar in Field Planting at Establishment of Richard Langle, White Plains, N. Y., Showing Protecting Lattice

Among the Growers

Richard Langle, White Plains, N. Y.

The Violets which come into the New York market from this establishment are always conspicuous for their fine quality, a distinction which is due to the excellent methods of culture practiced here, and the careful selection of plants for growing on in the houses. A view is presented herewith of a choice field planting of the varieties Marie Louise and Farquhar, with lattice protection. The plants were planted early in May, and the lattice was built over them after they had been established three or four weeks. In protecting them from the hot rays of the sun a more even growing temperature is obtained. There were 20,000 plants in this block, most of them intended for Fall sale to the trade. This method, Mr. Langle says, insures good, healthy stock for distribution. The photograph was taken Aug. 5.

Violet Mrs. Elizabeth H. Langle
Average Flowers are Over an Inch in Diameter

Another picture is shown of 20,000 field plants of the single varieties Princess of Wales and La France. No protection is given to these, as they seem to grow just as well, or better, without shade; with shade they have been found to run too much to foliage.

In the greenhouses about 20,000 plants are benched for cut flower purposes.

Mr. Langle is nursing along a stock of a new variety which has originated with him and which has been named Mrs. Elizabeth H. Langle. It is a sport from Farquhar, but much better in habit. It does not throw waste runners to the extent that other varieties do, and necessitates no more assistance to run two houses of it than is required for one of the other sorts. The flowers are very large, generally an inch and more in diameter. Just now 35 of the flowers makes a bunch as large as 50 flowers of other good varieties. The petals are slightly serrated, and the foliage also is distinctive in this respect. The color is excellent, running to true violet, with less white marking than other varieties. Mr. Langle has about 1500 plants at present, and expects to disseminate the variety in about a year's time.

James Wheeler, Natick, Mass.

James Wheeler, well known among the Boston craft, is giving up private gardening and going to devote his time to commercial floriculture and nursery work. He has purchased thirty-two acres of very desirable land at Natick, Mass., and will erect at once a greenhouse, 300x60 ft; Carnations will be grown in the larger por-

tion of this house. Some of the land is to be devoted to nursery stock of the highest grades of trees, shrubs and herbaceous plants. A new modern dwelling house is to be also erected as soon as possible. The private gardeners are sorry to lose so good a man from their ranks as Mr. Wheeler is, but their loss will be a gain to the trade, as it will obtain a man of sterling worth who will be an honor to the business.

Mr. Wheeler has been head gardener to Mr. Joseph White of Brookline for over twenty-two years, and during all these years he has been held in the highest esteem and respected by every one who knew him. He has been identified as one of the Hub's expert plantmen, and most of us can remember the fine specimens of Ferns, Palms, Cycads and many other plants he has exhibited at Horticultural Hall.

He has been a strenuous worker in horticulture and has held many important positions. For many years he acted as one of the judges at the Mass. Hort. Society shows. His judgment was never doubted. He was straightforward, upright and honest in his judging, and pleasing and affable in his dealings with exhibitors. In fact, he had just the right material in him to make a good judge. He was president of the Gardeners and Florists' Club for two years, and during his administration the club grew and flourished.

Mr. Wheeler is an Englishman and has been connected with gardening since boyhood. He began his career at Longford Castle, the seat of the Earl of Radnor, and worked there for seven years. After leaving Longford Castle he worked with Mrs. Gurney Pease, Woodside, Darlington, where he remained until he came to this country in 1885. His first employment here was at the then famous Payson estate, Belmont, Mass. For two years he acted as foreman, and afterward as head gardener, until the establishment broke up. The writer was one of Mr. Wheeler's subordinates at the Payson estate and has been very closely connected with him for the past twenty-two years and the longer we know him the better we like him. We wish him the greatest success in his new undertaking. We have not the least doubt of his future success as a man of his ability and integrity will succeed at anything or anywhere. R. C.

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

J. A. Budlong & Son Co., Auburn, Providence, R. I.

The J. A. Budlong & Son Co.'s establishment is without doubt the largest flower producing plant in the State of Rhode Island. It is situated at Auburn, only a short distance from the city of Providence. The firm has long been famous for the high quality of garden truck produced, and seven years ago the growing of flowers was taken up, the venture being attended with such success that today there is a total of over 275,000 sq. ft. of glass in the establishment. The houses range from 400 ft. to 470 ft. in length. The principal crops are Roses and Carnations, the former leading; and the whole establishment gives evidence of system and good management. In my whole tour through the Rose and Carnation houses not an insect or a speck of mildew was to be seen.

For Roses the benches are raised above the floor level 20", which besides providing 8" for loam allows for 11" of stone drainage, with 1" for a mulch and watering. In placing the drainage, rough field stone is used; a row of flat stones is set up along the sides and on the ends, forming an enduring base for the board framing. Over the rough drainage is placed a layer of crushed stone to fill in the interstices, and thus insure perfect drainage. The soil is of a light sandy nature, and bears a free application of water, as well as liquid stimulants, and for the application of these commodities the whole plant is thoroughly piped. In regard to the heating, all houses are doubly piped, so that in case of accident to one set of boilers or pipes the circulation can immediately be changed over until repairs are made. All houses latest built are of the most approved pattern of iron and glass, Lord & Burnham design.

In Roses, Killarney and Richmond occupy a large space and give satisfaction. The number of My Maryland is to be increased. White Killarney is to be thoroughly tested, yet Bride will continue to hold its own. Bridesmaid will be discarded. All of the Roses grown are worked on the Manetti stock.

The only Carnations grown in quantity are pink, white and crimson Enchantress, White Enchantress, White Perfection and Beacon, and the list appears to fill the bill. One house set out with plants from 4" pots has given great satisfaction, and the plants have proved in every way superior to field grown stock. An up-to-date packing shed with ample refrigerators makes this the best managed flower factory that we have ever seen. Most of the product is sold in the Boston and New York markets.

It was not my privilege to meet Mr. Budlong, but through his courtesy in admitting visitors generally I was given the freedom of the place, and to Mr. Bennett, Foreman Boodge and others thanks are expressed for a kindly reception. ALEXANDER MACLELLAN.

Two Superb New Roses

Lady Duncan.—This fine Rose was awarded a silver medal by the Mass. Hort. Soc. It is a hybrid of the ever excellent Rugosa and the Memorial Rose (It. Wichuraiana). It has the prostrate long rampant growth of the Wichuraiana, while the Rugosa blood shows in the luxuriant, dark, glossy foliage, and in the profusion of large, single flowers. The petals of rich glowing pink melt into an exquisite large yellow center. Lady Duncan is perfectly hardy, even in Canada, is a strong grower, free bloomer, and of long duration of blooming.

Daybreak.—A Rose of Wichuraiana type crossed with Rambler Dawson. A vigorous grower, profuse bloomer, excellent, too, for forcing. The flowers are single, in great pyramidal clusters of deep, yellowish pink, somewhat darker than Lady Duncan, the petals of a lighter shade toward the center. The foliage is bright, glossy green, and the habit trailing, like its parent, Wichuraiana.

Both these Roses were raised by Jackson Dawson and are introductions of the Eastern Nurseries, Henry S. Dawson, manager, Jamaica Plain, Mass.

THE FLORISTS' EXCHANGE Is A Business Paper For Business Men

Violets Princess of Wales and La France in Field Planting at Establishment of Richard Langle, White Plains, N. Y.

Stumpp & Walter Co.'s High-Bred Asters

Asters are our Specialties, and great care is taken to have only the best and those that will give the greatest satisfaction. We have been very highly complimented on the choiceness of our strains.

ASTER. Queen of the Market. This is the earliest of all, fully three weeks earlier than other Asters. Selected stock.

ASTER. Purity. One of the finest white Asters grown, either for pots or cutting. Trade pkt. 25c., 1/4 oz. 75c., oz. \$2.50.

ASTER. Daybreak. Counterpart to Purity, with a fine rose color similar to Daybreak Carnation; very fine. Trade pkt. 25c., 1/4 oz. 75c., oz. \$2.50.

ASTER. Giant Comet.

Tr. pkt. 1/4 oz. Oz.	Tr. pkt. 1/4 oz. Oz.
Pure white \$0.25 \$0.75 \$2.00	Light rose\$0.25 \$0.75 \$2.00
Dark blue .. .25 .75 2.00	Mixed 20 .60 1.75

ASTER. Hercules. White. Remarkable new introduction, semi-dwarf, huge pure white flowers of most refined shape; the best white flowering Aster we have ever seen. Pkt. 25c., 1/4 oz. \$1.00, 1/2 oz. \$3.50, oz. \$7.00.

ASTER. Splendor. Upright flesh pink. In this variety we have one of great value. It has many qualities which commend it highly, not only in the habit of growth, but in size, form of flower, and in color, which is one of the most desirable in an Aster, being of a beautiful light flesh pink, a shade which can be used in nearly all floral work. The plant has the ideal habit of an upright growing sort. Pkt. 25c., 1/4 oz. \$1.75, oz. \$5.

ASTER. Vick's Violet King. The peer of the grandest Chrysanthemum. The habit is similar to the popular Vick's Branching, vigorous in growth, long, stiff stems; petals somewhat resemble the quilled varieties but much larger and broader, completely covering the crown. In shape and size the bloom is round, full and large, many of the flowers 4 to 5 inches. Its color is a soft violet-lilac. Trade pkt. 25c., oz. \$1.50.

GIANT STOCK "Abundance"

Without a doubt this is the finest Stock ever introduced. It blooms profusely, the color of the flower being a beautiful pink. In our trial grounds the past Summer we had several plants that measured two feet across. With good culture, transplanting several times and feeding with liquid manure one can obtain gigantic bouquets similar to cut. This variety can be cultivated either as a Summer or Winter Stock, and by sowing early in June it may be had in flower by Christmas time. Per pkt. 500 seeds \$1.00.

The Novelties and Specialties of 1910 for the Seedsman and Florist

The pages which follow will serve as a reliable guide to very many of the Novelties and Specialties of the leading seedsmen and plant originators which are being offered for the year 1910. This Novelty edition will be a yearly feature of The Florists' Exchange and we are convinced that it will grow in importance as its value to the trade becomes appreciated by those most interested. The idea of presenting all the Novelties and Specialties of each year "under one cover" is an attractive one to our readers.

Novelties and Specialties offered by Weeber & Don, New York

The Don Tomato; Extra Early Forcing.—Notwithstanding the numerous new Tomatoes introduced in recent years, this grand variety, sent out by us, possesses all the qualifications to enable us to state that it is the best forcing Tomato ever offered. The fruit is of medium size, dark red in color, very smooth, solid, and almost globe shaped. The plants form 3 to 6 stalks, and average 6 ft. in height, with comparatively very little foliage. It is remarkable for its bearing qualities; the plants are covered with clusters of fruit averaging from 5 to 9 Tomatoes in each cluster, bearing right down to the bottom of the stems. It is also very valuable for first crop outside planting.

Seth Low Musk Melon

Seth Low Musk Melon.—This excellent Melon, introduced by us last year, we can confidently recommend as one of the best varieties grown, and those of our customers who have tried it speak highly of its qualities both as regards flavor, shape, and prolificness. In appearance it is very attractive, nearly round in form, with greenish yellow skin, slightly netted, and deeply ribbed, averaging in weight from 7 to 10 lbs. The flesh is rich salmon color, very deep, with an unusually thin rind. We consider this variety a valuable addition, either for growing under glass or in the open, and as a Melon to answer both purposes it has no equal.

Ideal Forcing Lettuce

The Don Tomato

W. & D.'s First and Best Cauliflower.—This is described as the earliest of all Cauliflowers. For forcing under glass during Winter and Spring, it is peculiarly well adapted, from its dwarf growth and short outer leaves, and for this purpose no other Cauliflower is now so largely grown.

W. & D.'s Brechin Castle Brussels Sprouts

scarlet color, and the flavor is extremely mild.

Ideal Forcing Lettuce.—As a Lettuce for growing under glass, Ideal, in our opinion, is far ahead of anything yet sent out, and we have received most gratifying reports from customers who have already grown it. It possesses all the good qualities of May King, but comes into use much earlier and forces better than that favorite sort. We have every confidence in recommending it as the best Lettuce of this class.

W. & D.'s Brechin Castle Brussels Sprouts.—This excellent variety has proved to be a decided advance on anything yet offered, and we have had numerous testimonials from our customers as to its value. The plants are of medium height, vigorous in growth, and entirely covered with solid dark green sprouts, very tender and of excellent flavor.

New Thick Fleshed Pepper Glory.

This novelty is quite distinct from any variety yet introduced, its chief feature being the thickness of flesh, in which important respect it is pre-eminent, no other variety being able to compare with it. The heavy solid fruit is conical in shape and pleasing in appearance, growing about 4½ inches long and 3 inches wide at the top. It is of a deep

Calceolaria Hybrida. W. & D.'s Selected Strain.—Saved only from the very finest, largest flowering and most beautifully marked varieties. This strain cannot be surpassed.

Cineraria Hybrida. W. & D.'s Extra Selected.—We claim that this strain of Cineraria cannot be excelled. The plants are of compact growth, fine, clearly cut, healthy foliage. The flowers are perfect in form, borne in the greatest profusion, and embrace in color all the most desirable shades.

Chrysanthemum King Edward VII.—This is undoubtedly the finest and handsomest of all the Chrysanthemum maximum varieties. The single flowers are pure white, yellow centers; large, graceful, and produced in countless numbers on long, strong stems, making them valuable for cutting. The plants are perfectly hardy and should have a place in every garden.

Papaver Orientale Colosseum. New Giant Oriental Poppy.—A specially selected strain of the beautiful hardy Oriental Poppy, so well known that we need not further describe it. The seed we offer has been saved exclusively from flowers measuring 8 inches across and 24 inches in circumference, and will produce gigantic flowers of a brilliant deep scarlet color, adorned with a large black spot at the base of each petal.

Gloriosa Superba Grandiflora.—A rare and very beautiful greenhouse climber allied to the Lily, and deriving its name from the latin "Gloriosus" (glorious), referring to the exquisite beauty of style, form and color of the flowers. Must be seen to be appreciated. To start, plant bulbs singly in 5 to 7-inch pots, according to size, or three to four in a good-sized tub, during March, April and May, in rich soil, with good drainage, and place in a strong, moist heat. They soon begin to sprout and grow vigorously to a height of 12 to 15 feet, branching more or less as they begin blooming. The flowers, when first opening, are of a delicate orange-pink color and gradually change to orange crimson as they grow older. The petals are long, narrow, beautifully ruffled and curled, and turo back from the stamens. Valuable alike for cutting or as an ornaement, and an attraction to the greenhouse or conservatory.

Cyclamen. W. & D.'s Superb Giant Prize Varieties.—Handsome greenhouse and parlor plants with beautifully mottled foliage. The seed we offer has been saved for us in England by a specialist, only from his choicest, largest flowering and most perfect plants, and therefore cannot fail to produce flowers of the finest substance. To those who really want the best, we recommend our strains with all confidence as the largest and most improved of all giant flowering Cyclamens.

Cyclamen, W. & D.'s Superb Giant Prize

Novelties and Specialties for 1910 Offered by Henry A. Dreer of Philadelphia

Novelties and Specialties in Flower Seeds

While many of the following are of European origin, we have had a number of them under observation for a year or two, when on our annual tours of inspection, and are pleased to be able to offer them.

Veitch's Long-Spurred Hybrid Aquilegias.—This beautiful strain of Columbines comprise new and pleasing shades and combinations, effective and striking in the individual flowers, ranging through all shades of lavender, blue, mauve, white, yellow, orange, scarlet and bright rose pink. The plants are perfectly hardy, vigorous and stately in growth and produce abundantly large and elegantly shaped flowers with long spurs, borne well above the pale glaucous green foliage.

Dreer's "Crimson King" Aster.—This variety originated with our own grower, who has been carefully selecting it for a number of years, until it is now perfect in every way. It has all the good qualities of our Superb Late Branching type, with extra large densely double flowers, few under 5 inches across, on stems 15 to 18 in. long, in color a very rich blood crimson, full of fire, making a brilliant bed or border, and very desirable for cutting, the color showing up well under artificial light.

Dreer's "Pink Beauty" Aster.—A magnificent variety of strong, free, upright growth, 24 to 30 in. high, blooming from early in August until well on in September, with frequently as many as 50 flowers open at one time on long, strong stems, and averaging 4 in. across, of Chrysanthemum shape, the inner petals incurved, outer reflexed; color a soft, delicate blush pink, a shade which is always in demand for cutting.

Astilbe Hybrida Rosea.—New hybrids of this lovely hardy perennial, produced by crossing *A. Japonica* with *A. Chinensis*. May be expected to produce entirely new varieties, varying in color from the palest to the deepest rose pink with a small percentage of white-flowered forms. Seed sown early produce flowering plants the first year and strong clumps the second season. Valuable alike for forcing and the border.

Begonia Gracilis Prima Donna. This novelty may be briefly described as a perfected ideal form of the popular pink *B. gracilis*. The flowers are much larger, of a limpid rose, shading to carmine at the center; a color of exquisite beauty; habit of plant perfect and very free flowering.

Veitch's Long-Spurred Columbines

Begonia semperflorens "Salmon Queen."—We had the pleasure of seeing this beautiful variety in flower at the introducer's a year ago, and were much impressed by the brightness of its brilliant salmon rose flowers. All the varieties of this free flowering, easily raised *Begonia* are worth growing either for bedding or for pot culture, and this, the brightest colored of them all, is especially desirable.

Double Blue Cornflower (*Centaurea Cyanus* fl. pl.)—This was introduced by us in 1907, and is now a standard variety and largely used by many florists who quickly recognized its value as a cut flower. It is identical in color to the popular single blue variety which is so much in demand for cutting, especially for boutonnières, but, being a full double flower, it takes fewer of them to make a nice bunch and is better in every way.

Cosmidium "Orange Crown."—Very handsome new annual, forming elegant branched bushes about 2 ft. high; the bright single flowers are $1\frac{1}{2}$ to $1\frac{3}{4}$ in. across, borne on long, slender but self-supporting stems well above the graceful foliage; color golden yellow, with a broad conspicuous circle of rich orange around the disk; very valuable for cutting, lasting for several days; the flowers are produced in constant succession throughout the Summer.

New Hybrid Delphiniums.—We are fortunate in having secured a number of magnificent new hybrids which represent the cream of a famous English collection. Included are such sorts as: King of Delphiniums, Lizzie, Masterpiece and Queen Wilhelmina.

Solanum, Capsicastrum "Fra Diavolo."—A new variety of the well-known Jerusalem or Coral Cherry, of close, compact growth, with foliage somewhat smaller and lighter green than the type. The small, bright scarlet fruits are produced in lavish profusion, and as they remain on the plant a long time it makes a beautiful decorative pot plant through the Winter months.

New Dwarf Blue Salvia (*Salvia patens* compacta nana).—*Salvia patens*, the Blue Sage, has always been admired as the richest blue of all blue flowers, and in this new variety we have a decided improvement, being dwarfer and more compact in habit; the flowers larger and even more intense in color; the spikes, which are held well above the foliage, have usually 3 to 5 flowers open at one time.

New Stokesia or Cornflower Aster.—The blue *Stokesia* *cyanca*, although a native of the United States, was practically unknown as a garden plant until the year 1903 when we illustrated it in colors on the cover of our Garden Book; as a result of our efforts, it is now one of the popular hardy perennials. Some four years ago, a white-flowered variety was discovered, and now we are able to offer a mixture containing a number of rose shades, and various shades of blue as well. These should prove highly interesting, and we look forward to the time when this plant will be found in all gardens in a great variety of colors.

Various New Plants and Bulbs

Acanthus Montanus.—An attractive and interesting plant, not only on account of its peculiar flowers but also for its remarkable foliage, which makes it a most desirable subject for the warm conservatory or greenhouse. The 12- to 15-in. long leaves are deeply and irregularly lobed, each lobe terminated with a long spine-like point, and are of a dark olive green, marbled with lively yellowish green, the midrib being brighter. The inflorescence is stately, consisting of a long spike of white flowers with purple veined bracts.

Tuberous-Rooted Begonia Frau Helene Harms.—This is in pleasing primrose yellow what *Begonia Lafayette* and *Duke Zeppelin* are in crimson and scarlet; a decided acquisition.

Dracena Indivisa Prince Albert.—A variegated form of *Dracena indivisa* and a decided improvement on *Dracena Doncetti*; the long narrow foliage being broadly edged with creamy white and a rich bronzy red midrib.

Pereskia Godseffiana.—A splendid new variegated foliage plant which should prove a valuable acquisition for use in window boxes, bedding, etc. in the same way as the variegated forms of *Acalypha* are now used. The plant is of strong, vigorous growth, with somewhat succulent leaves, which are neatly variegated with green and ochre and suffused with a lively bronze red.

Amaryllis R. H. James.—Magnificent flowers of heavy texture and well expanded form, rarely under 6 in. across; in color a dazzling scarlet, identical in shade to *Scarlet Sage*, relieved by a white band and featherings in the throat which intensifies the brilliancy of the scarlet.

New Show Dahlia Susan.—In this we have an ideal cut flower variety of a most pleasing shell pink, a shade of color that is always popular, and, while it does not stand alone in this color (there being other varieties almost identical), it is the only one of this type which produces a sufficient number of flowers, and all on long stems, to make it profitable for that purpose.

The New Golden-Leaved Smilax.—The descriptive name, "Golden-Leaved Smilax" in this instance does not appeal. One is very naturally inclined to think of an unhealthy plant of dull color, but such is not the case. The foliage of this variety is of such a live fresh golden green color that it appeals to all who see it. A plant which we are certain will furnish suitable decorative material for many purposes much more appropriate and decorative than the ordinary green *Smilax* or *Asparagus*.

Hybrid Tea Roses for Outdoor Bedding

A collection of the choicest introductions of Alexander Dickson & Sons of 1908 and 1909:

Duchess of Wellington (1909).—A grand Rose of the famous Killarney type, but of an entirely distinct color from any Rose now in cultivation, it being of an intense saffron yellow stained with crimson in the first stage, which, as the flowers develop, changes to a deep, coppery, saffron yellow. The flowers, which are fairly full, resemble Killarney in shape, but the petals are larger and of greater substance. Delightfully fragrant and very free flowering.

Pedigree Hybrid Tea Rose Geo. C. Wand

New Hybrid Delphiniums

Novelties and Specialties for 1910 Offered by Henry A. Dreer of Philadelphia—Concluded

Hybrid Tea Roses for Outdoor Bedding—Cont.

George C. Wand (1908).—A remarkably distinct and beautiful variety, possessing a shade of color hitherto unknown among Roses, namely, a glowing orange vermilion which does not fade. The flowers are large, full, perfectly formed, with pointed center. Highly tea scented. Without doubt one of the choicest and most magnificent Roses ever sent out.

Grace Molyneux (1908).—A chaste Rose of rare beauty and fascination; the habit of growth is perfection, every shoot producing a bloom. A veritable pearl for garden decoration. The color is a creamy apricot, flesh in the center; the outer petals when developed are delicate creamy white inside, with a faint pink sheen on the reverse. Delightfully tea scented.

John Cuff (1908).—A valuable acquisition of unique color. It is one of the earliest to expand its very large and beautiful blooms, which are of great substance and perfect symmetry. The buds are long and pointed and produced in marvelous profusion, of a warm, deep carmine pink color, with a most attractive and distinct yellow zone at the base of the petals.

Lady Ursula (1908).—A truly magnificent Rose, of vigorous erect growth, possessing exceedingly free blooming qualities. The foliage is large, massive and attractive. The flowers produced on every shoot are very large, full and of great substance and perfect form, with high center, from which the petals gracefully reflex; in color a delightful shade of flesh pink. Distinct from all others; delicately tea scented.

Mary, Countess of Ilchester (1909).—A Rose of the greatest distinction and charm; a warm crimson carmine. It possesses unusually free and continuous blooming qualities. The flowers are of great size with large massive petals. Delightfully scented.

Margaret Molyneux (1909).—One of the most distinct and beautiful Roses yet introduced. The flowers are semi-double, and are produced in trusses of from three to five, each carried on long rigid stems. The color is as novel as beautiful, varying from saffron yellow shaded bronzy carmine in the bud to delicate salmon pink as the flowers fully expand. It is strongly tea scented.

Walter Speed (1909).—A magnificent Rose of robust, vigorous, erect growth, and possessing exceedingly free blooming qualities, every shoot being crowned with flowers. They are large with imbricated form and high pointed center. The color is a deep lemon yellow which, as the flower develops, becomes milky white.

New Hardy Perennials

Achillea Ptarmica fl. pl. Boule de Neige.—Is a decided improvement on Achillea, the Pearl, the variety so extensively grown for cutting, with which it is identical in habit but with flowers one-half larger.

Etheopappus Pulcherimus is not unlike a graceful form of Centaurea, producing during July masses of brilliant rose-colored flowers useful for cutting as well as for garden decoration.

Astilbe Arendsi Ceres and Silver White.—These are the results of crossings between Astilbe Davidii, Japonica compacta, Astilboidea and Thunbergii. They are of strong, robust habit, growing from 2½ to 3 ft. high, in much branched panicles; the former with light rose colored flowers, the latter with silvery white flowers. Excellent subject for a semi-shaded moist position.

Astilbe Grandis.—An introduction from China, growing from 5 to 6 ft. high; the panicles of white flowers range from 2 to 2½ ft. in length.

Artemisia Lactiflora.—Unlike all the other Artemisias, and a splendid subject for the hardy border, producing Spiraea-like feathery panicles of fragrant creamy white flowers on 3½ to 4½ ft. high stems during August and September. Its time of flowering makes it especially valuable, there being nothing of similar habit in bloom at this period.

Iris Interregna

Clematis Recta Fl. Pl.—By no means a new plant, having been introduced in 1890, but being slow to propagate it has been very sparingly offered. It is a counterpart of Clematis recta in habit, but with splendid double white flowers and retains its freshness much longer than the single form. Very valuable for cutting and a showy plant for the border.

Sedum Spectabilis Brilliant.—When Sedum spectabilis atropurpurea was introduced, some five years since, it was a decided improvement on the popular type. In the variety Brilliant we have a sport from atropurpurea which is of a still brighter and deeper color and certain to supersede the two older types.

Senecio Veitchianus and Wilsonianus.—Two varieties of the Groundsel which have been introduced from China, especially suited for planting in low moist ground, where they will form large, bold clumps from 2 to 5 ft., bearing masses of bright yellow flowers during July and August.

Pyrethrum Uliginosum Stellata.—A greatly improved form of our common Giant Daisy, with flowers fully one-half larger, with long, narrow petals, forming a much more graceful flower than the type. A most useful Summer cut flower.

Choice New Varieties of Trollius

Greatly improved forms of the Globe Flowers; all of strong vigorous growth, and of very large size: Gold-oeille, golden yellow; Götterfunke, orange yellow; Helios, very free pure yellow; Leuchtkegel, deep reddish orange; Lichtball, large globular orange yellow; Salamander, soft orange yellow.

New Varieties of Anemone Japonica

Alice.—Raised by the originator of Queen Charlotte, on which it is a great improvement; of a silvery rose or shell pink, suffused with fresh carmine.

Kriemhilde.—Semi-double flowers, 4 in. in diameter; of a lively rose pink; on stout stiff stems; very useful for cutting.

Lorely.—Exceptionally free flowering semi-double cup-shaped flowers of a bright silvery mauve pink; about 3 in. in diameter.

New Iris Germanica

A most distinct set of varieties raised by Messrs. Goos & Koenemann, in which not only distinct new colors are presented, but in which the form of the flower has been brought to a most perfect globular shape.

King of Iris.—A striking novelty, with flowers of perfect form; the standards clear lemon yellow, while the falls, which are very large, are a deep satiny brown, with a broad border of golden yellow.

Lohengrin.—One of the strongest growers yet introduced, both foliage and flowers being of gigantic size, the flowers being nearly 5 in. deep, with petals 2 in. wide, and of that beautiful pink color peculiar to the Cattleya.

Nibelungen.—Flowers as large as the preceding; standards olive green suffused with sulphur yellow; falls deep violet purple suffused with creamy white on the edges.

Princess Victoria Louise.—Standards pure sulphur yellow; falls rich plum color with cream colored edges. An entirely new and distinct combination of colors.

Rhein Nixe.—Standards pure white, falls deep violet blue with white margin; will attain a height of 3 ft., with many branched stems. Very free flowering.

New Iris Interregna

Messrs. Goos & Koenemann have been very successful in giving us a set of varieties, crosses between Iris pumila hybrida and Iris Germanica, which are an entirely distinct type. They are intermediate between Iris pumila and the general type of Germanica and, coming into flower earlier than the Germanica varieties, will help to extend the season of this most beautiful type of flower, which combines perfection of form with large size and clear decided color. Another distinct feature about the Interregna Iris is that the foliage, which is comparatively dwarf, retains its freshness throughout the season, until very late in the Autumn.

Halfdan.—Pure creamy yellow, of perfect form.

Helge.—Light citron, with pearl colored center. A beautiful soft shade.

Ingeborg.—Pure white; flowers 5 in. deep with petals 2 in. wide. A grand flower.

Walhalla.—Standards rosy lavender; falls velvety claret red. A most distinct and beautifully formed flower.

Iris Pumila Hybrida "The Bride".—Without question the prettiest dwarf white Iris yet introduced. The perfectly formed flowers are creamy white on opening, changing to pure white, and are borne on stems a foot high, early in May.

Three Fine New Hardy Phlox

The high standard now placed for a hardy Phlox makes it difficult to find something really distinct to add to the already too long list of perfect sorts. Out of over fifty varieties tried the past season we have selected these three grand sorts, which not only fully meet present requirements, but which will be found grand and distinct additions to any collection:

Elizabeth Campbell.—Very bright salmon pink, with lighter shadings and dark crimson eye; an entirely new and much wanted shade in Phlox.

Frau Anton Buchner.—The finest white variety yet introduced, having the largest truss and individual flower; of dwarf habit.

Rosenberg.—Bright reddish violet, with blood red eye; large truss and individual flowers as large as a silver dollar.

Hardy Shrubs

Buddleia Variabilis Veitchiana and Buddleia Variabilis Magnifica.—These are wonderful improvements on Buddleia variabilis, being more vigorous and producing magnificent spikes of flowers frequently 20 in. long by 3 in. across. Veitchiana is of a most pleasing shade of violet mauve with orange center, while Magnifica is of a deep rose purple also with orange yellow center. Both flower throughout the Summer and Fall and attract much attention.

Spiraea Bumaldi Walluf.—Is a sport from Spiraea Anthony Waterer, of a much more decided intense deep crimson color; a most decided and valuable acquisition.

Hardy Climbers

Ampelopsis Lowii.—Like Ampelopsis Veitchii, this clings to the smoothest surface. It is of equally rapid growth and perfectly hardy, but the foliage is smaller and very deeply cut, giving it a grace and elegance not possessed by the old sort. In Spring and Summer the leaves are of a bright apple green color, changing in Autumn to brilliant crimson and scarlet.

Vitis Henryana.

—A new variety recently introduced from China, with foliage in general outline similar to, but not as large as that of our native Virginia Creeper, the leaves being much heavier and of greater substance and prettily variegated. The ground color is deep velvety green, the midrib and principal veins of silvery white. The variegation is most pronounced in the Autumn, when the green ground color changes to red, the white marking not changing color.

Ampelopsis Lowii

Etheopappus Pulcherimus

Novelties and Specialties offered by W. W. Rawson & Co., Boston, Mass.

New Cactus Dahlias

Boston Yellow.—Produced by Jas. Robertson. This Dahlia received the award of recognition from the N. E. Dahlia Society; also won the Rawson Silver Cup for keeping qualities. It is a clear yellow; the flower is extremely massive and is carried most erect on stout stems never less than 15 in. in length. It is without doubt the peer of the yellow Cactus Dahlias and especially adapted for florists' use.

General Edmund Rice.—For a rare color there is nothing in the plant line that can compare favorably with this new Dahlia. In form and color it resembles somewhat the Master Carl, but truly is a great improvement and advance over this variety. The flower is very massive and some of the first specimens measure full 7 in., while the ones to follow are never less than 6 in.; color is difficult to describe and one really has to see a flower to get a true conception of its beauty and rarity, deep orange, shaded copper and yellow at base. Plant grows 4 ft. high and produces each flower on an individual stem never less than 18 in. long.

James Berwick.—A most refined form and a rich color, deep crimson purple; the flowers are immense in size and very deep and appear most free during the entire season; the plant grows fully 6 ft. tall and carries its flowers erect.

L. P. Hollander.—The first fancy Cactus Dahlia which is truly free blooming and which carries its flowers erect on the stem so each flower on the plant looks straight at you. Color white striped deep rose; height, 6 ft. Flowers large and bloom continuously.

Marblehead.—This variety has been exhibited twice before the N. E. Dahlia Society; the first year it received the award of recognition, the second year the Society's "First Certificate." It is the only variety that so successfully passed the rigid examination of the judges. The form and color of this novelty are original and distinct. The gigantic blooms, which easily measure 7 in. in diam. are of a distinct soft scarlet. The petals are the finest known, straight as a die and extremely sharp-pointed at the tip, with a slight division similar to Progenitor. The flower is flat and a limitless number of petals radiate from the center in every direction, giving it the appearance of a star. The flowers are borne in endless profusion far away from the foliage and in fact to such an extent that they literally hide all foliage. Flowers appear early and remain perfect until the last.

Miss Polly Bush.—Grows dwarf, 3 ft. in height and produces little foliage; the flower stem is carried from the joint upright for fully 18 in., and is always crowned with one extremely massive flower of a most beautiful shade, an illumined bright rose. Petals are very straight and finely rolled back. This plant flowers continuously, but on account of its original growth not more than ten flowers are produced at one time.

Mrs. Jas. D. Colt.—We are proud to present to our friends the first truly orchid-colored Cactus Dahlia, approaching in color that of Cattleya orchid, a violet pink. Additional remarkable features of this novelty are that the gigantic flowers are carried erect on stems 2 ft. and more in length and appear in the greatest profusion from early until late. The plant grows 5 ft. high and does not spread as Dahlia plants usually do, but bears more flowers than foliage. For either cutting or garden effect this variety is a decided acquisition.

Mrs. John Hays Hammond.—A most showy new sort; the color is of an old gold, shaded to bronze, with a clear golden center; petals are very long and exquisitely pointed; flowers extremely free on erect, long stems; excellent for cutting; plants grow 5 ft. high and produce their flowers early.

Mrs. Thomas Nelson Page.—The most pleasing combination of color we ever had the pleasure of seeing, delicate salmon, shading to primrose in the center. The flowers measure fully 6 in. across and are carried erect on stout stems often 3 ft. in length. The plants grow to a height of 5 ft. and hush freely with a great quantity of flowers.

Mrs. William Howard Taft.—This is the first of a new series of Cactus Dahlias with a rigid stem, showing its flowers face forward and which can be cut on stems exceeding never less than 12 in. The form of the flower is entirely distinct. The individual petals are fluted right to the center and curve half inward toward the center, resembling to some extent, the Major Bonnaffon Chrysanthemum. The most pleasing feature of this novelty is its charming color, a La France Rose, with a clear white center. The plant grows 5 ft. high and flowers quite freely. Received the "Award of Recognition" from the N. E. Dahlia Society, Sept., 1909.

Peony Flowered Dahlias

Boston.—The only way we can describe its color is peaches and cream; flowers are of medium size, but very refined and are produced freely; plant grows 3½ ft. high.

Devereaux.—An enormous flower of a lovely delicate pink, flowers stands erect and are by far the largest pink flowers of the Peony form.

Marlboro.—A massive flower with several rows of petals, color a light pink marked with deep rose; plants very tall and produces their flowers freely.

Sangus.—Purest white, flower of immense size; occasionally produce a flower of the single form.

Springfield.—A distinct new color, old gold; flowers profusely all Summer, and for its superior merits was awarded the "Award of Recognition" by the N. E. Dahlia Society, Sept., 1909.

Giant Single Dahlias

Measuring more than 3½ in. in diam.

Bangor.—One of the freest blooming Single Dahlias; color, bright scarlet, petals are scooped and pointed; height, 5 ft.

Beach Bluff.—Sulphur yellow shaded with bronze, a distinct color, very pleasing. Individual flowers may be cut with stems often 4 ft. in length.

Belfast.—One of the gems in this collection. It has one extremely good habit, and that is its compactness of growth. Each individual plant makes a solid bush of fine foliage about 2½ ft. in height and then throws up an unlimited number of flower stems, fully 18 in. over the foliage, crowned with a single giant bloom of a dazzling scarlet. The plant from a distance looks like a ball of fire, and would lend itself admirably for landscape effect. It is in full bloom July 1, and if the seed pods are constantly removed it will remain in bloom until the last possible day.

Belmont.—Dark reddish foliage and dark stems covered with blooms of a rich maroon in cup shape. Plant quite tall and robust and flowers very large.

Clinton.—Shell-pink, with golden band around disc; petals round-edged.

Hathorne.—Pure white, occasionally a flower appears semi-double; all flowers are carried on enormous long stems; flowers exceedingly free.

Hyde Park.—Star-shaped deep rich scarlet with a purplish hue, extreme tips light golden, base yellow; size 5 in.; height, 5 ft.

Lexington.—Most beautiful orchid pink with broad band of gold around disc; pointed petal, most artistic flowers on long straight stems.

BOSTON YELLOW

Manchester By the Sea.—Giant bloom; bright vermilion with narrow band of gold around disc, very showy and exceedingly free in blooming.

Nahant.—Velvety crimson, with golden band around disc; very free, on long stems.

Nashua.—Giant in bloom; canary yellow, of perfect form.

New Bedford.—Immense flowers, purplish crimson, with a beautiful band of gold around disc; very showy and decorative.

Old Glory.—Splendid flower, with unique coloring. Each petal of pure white is distinctly edged bright scarlet to the width of at least ¼ in., giving each petal the appearance of the American flag, hence its name. Plant grows dwarf and carries its flowers far above the foliage on erect stems, 12 to 18 in. in length.

Penacook.—White, suffused with pink and golden band around disc; a collarette of deep pink on the reverse side of petal; blooms free and is of very delicate appearance.

Rochester.—Pale peach color; pointed petals; cup-shaped, flowers of immense size.

Somersworth.—This is the star of our introductions. Each petal is slightly scooped and twisted from its center to the tip, is of unusual length and is sharply pointed. The petals are joined up to one-half their length and then expand in star-form. The color is an intense scarlet, with a broad band of gold around the prominent disc, this latter being also encircled with finely twisted petaloid stamens.

The Hub.—Petals broad, massive and pointed; color deep rose, with a broad golden band around disc; most pleasing and effective. Plant grows 5 ft. high and has a light green foliage.

MRS. WILLIAM HOWARD TAFT

Novelties and Specialties Offered by J. M. Thorburn & Co., New York

Eschscholtzia Thorburni.—The grandest of all Eschscholtzias and the most valuable novelty of the season. In habit it is the same as the California Eschscholtzia, commonly called California Poppy, but it is decidedly distinct in its coloring, which might almost be described as being barbaric in splendor. The unopened buds on outer side of petals are of the richest deepest possible crimson, tinging down in the inner side to bright flame color and molten gold. The flowers are larger than those of other Eschscholtzias and are borne with equal profusion.

Asparagus plumosus intermediate.—A cross between *A. plumosus nanus* and *A. plumosus robustus*. A new form with exceedingly graceful foliage; a rapid and vigorous grower. The best of all for home use or for florists.

Gladiolus Primulinus.—Very rare species from Victoria Falls, South Africa; grows 3 to 4 ft. tall and is very vigorous. The flowers are of good size and are a clear primrose yellow. Blooms late in July. Genuine stock; most valuable.

Gladiolus Primulinus Hybrids.—Hybrids of the above, with many related species and choice garden varieties. Extremely vigorous and healthy growers, blooming in July and August. Grow 3 to 5 ft. high, with long spikes of richly colored blooms, varying in color from clear yellow to crimson, the latter with large, soft orange or golden throats.

Gladiolus Primulinus (Seed).—Seed of this beautiful yellow sort, introduced by us recently.

Zinnia, Double Dark Maroon, "General Jacqueminot."—Half-dwarf, foliage dark green; flowers dark maroon, changing during the heat of Summer to brown. A splendid novelty.

VEGETABLES

Thorburn Long-Pod Forcer Bean.—A very early, dark green, long podded sort; extremely productive and of fine flavor. The finest forcing variety yet introduced.

Thorburn's New Model Beet.—The finest table variety of all; tender, solid and crisp flesh; of fine flavor. The color is a dark blood-red; almost globular in shape.

Thorburn's Gift Edge Cauliflower.—Best and surer of all. Produces large, heavy, solid white heads of finest quality. Undoubtedly the best variety.

Extra-Early Nordheim Sweet Corn.—The earliest Sweet Corn in cultivation. Produces stalks from 6 to 7 ft. high, each bearing three to four nearly perfect ears of finest quality. On style of Minnesota but far exceeding that variety in earliness and productiveness.

Eschscholtzia Thorburni

Thorburn's Early White Perfection Sweet Corn.—A comparatively new second early sort, producing good-sized ears 6 to 7 in. in length, of beautiful shape and almost pure white. Very small cob. It is a remarkable yielder, very sweet and a fine pure type without

out flint or glaze. It is undoubtedly the best second early white Sweet Corn yet introduced.

Enklaizen Glory Cabbage.—Large early sort, white and very solid. Produces fine ball-shaped heads and combines large size with earliness as no other early Cabbage does. A fine market sort. Best of all.

Thorburn's Noroton Selected White Spine Cucumber.—A selection of the Improved White Spine, but earlier, more perfect in shape and more prolific. The best slicing variety we have seen, being solid in flesh, fine grained, tender and of delicious flavor. Vigorous, healthy grower. A splendid sort for the home garden and absolutely without an equal for market.

Thorburn's "Germania" Pea.—Dwarf. Very prolific. Immense pods. Finest quality Peas. Undoubtedly the finest dwarf wrinkled Pea yet introduced. It is about as early as Nott's Excelsior, grows 16 to 20 in. high and bears in the greatest profusion immense pods nearly as big as Gradus, well filled with large peas of the best quality and of the finest flavor.

French Half-Long White Turnip.—One of the best table Turnips in cultivation. A small quick growing, early variety; pure white skin and flesh, very tender and sweet. Can be sown for succession like Radish.

Thorburn's Upright Sweet Salad Pepper.—Of recent introduction. Handsome, productive, and of finest quality. The color is bright scarlet and the flesh thick, mild and very sweet. The Peppers are as large as Ruby King and are all borne upright, clear of the ground. The flesh is so thick and the skin so tender that it may be fried like a beef-steak, and so sweet that it may be eaten like an Apple.

Scarlet Turnip Forcing, "Giant Butter" Radish.—This new sort has many points of excellence. It produces large Radishes uniformly round and of a vivid scarlet color. It keeps crisp and tender for weeks and in spite of its large size does not become hollow and pithy. It has a very small taproot and short leaves, which makes it a valuable forcer. On account of its size (five or seven radishes to a pound, generally) the seed should be sown deeper, and the plants thinned to stand further apart in the rows than ordinary sorts.

Novelties and Specialties Offered by W. W. Rawson & Co., Boston, Mass.—Concluded

Wakefield.—Immense flower, of a deep maroon, with a narrow band of gold around disc; very effective.

Weston.—Perfect flower, of a soft lavender pink, just an ideal color; flowers are borne on erect stems 18 in. long; splendid for cutting.

Woburn.—Enormous flowers of delicate shell pink, with golden band around disc; petals pointed.

Seeds of Named Varieties of Dahlias.—Fully 95 per cent. of the best Dahlias raised are produced from seeds saved from good named varieties. It also makes the raising of Dahlia plants from seeds more interesting if you know which the parent plant is. For this reason we offer for the first time seeds of the following varieties of Dahlias, saved at Marblehead, in packets of 25 seeds.

Cactus.—Amber Queen, Alexander, Cockatoo, Lucifer, Docteur Mene, Laranja, Thomas Challis.

Decorative.—Mme. Victor Vassier.

Peony-flowered.—Boston, Alfred Stamm, Springfield, Semiramis, Mosel, Ortlor, La Riante, Queen Wilhelmina, King Leopold, Hugo de Vries, P. W. Janssen.

Collarette.—Exposition de Lyon, Orphee, Etendard de Lyon.

Giant Single.—Dreadnought, Scarlet Century, Somersworth, Hall Caine, Souvenir de Paris, Manchester, Newport Beauty, Bondsman, Merry Widow, Wakefield, The Hub, White Cloud.

New Giant Gladiolus, Our Own Introduction for 1910

Mrs. Frank Pendleton, Jr.—(Originated by A. E. Kundred.) Awarded first-class certificate of merit by the Mass. Hort. Society of Boston. We are proud to have our name linked with the introduction of such a beautiful flower, and sincerely believe that up to this present moment no more exquisite color was ever offered to the public. This new variety is the result of crossing the best of the largest flowered type and is now a type of its own. In form it resembles the variety La Prophetesse, but in size it is almost twice as large. Its color is the most exquisite salmon pink with a very conspicuous blood red blotch in the throat on the lower petals. This novelty was exhibited last season at Boston, Bar Harbor and Newport and, judging from the comments made by those who saw it, it will become one of the most popular Gladiolus.

New Annual Lupins

The popularity of "Rawson's Pink Beauty Lupin" is responsible for the introduction of the following six new shades, which should be grown in every up-to-date garden:

Lupin Rawson's Azure Queen.—Celestial blue.

Lupin Rawson's Harlequin.—Bright scarlet, white tip.

Lupin North Pole.—Combined yellow and blue.

Lupin Rawson's Rising Sun.—Giant pink; tall, showy.

Lupin Rawson's Snowdrop.—Pure white.

Lupin Rawson's Salmon King.—Dwarf; salmon pink.

OLD GLORY

Sweet Pea, Rawson's Snowflake.—The finest and purest white Sweet Pea in existence. One can only appreciate its purity in color by placing it alongside any other white Sweet Pea. Four flowers are always carried on an extra long stem, often 15 in. in length. These flowers are produced in the greatest profusion during the entire season.

Gladiolus Mrs. Frank Pendleton, Jr.

Novelties and Specialties Offered by Peter Henderson & Co., New York

Henderson's New Early Giant Bush Lima Bean.

—This newest and best Bush Lima represents the highest achievement in bean breeding. We—the pioneer introducers of the Bush Lima—have since been constantly improving them and we are now enabled to offer our patrons, in Henderson's Early Giant, a Bush Lima that has attained the acme of perfection, surpassing any other strain or type on the market. The plants, of true bush form, 1½ ft. in height, are of healthy, sturdy, upright growth—requiring neither poles nor stakes—and bear, from July until frost, almost unbelievable quantities of 5 to 6-in. pods, each containing usually four large, thick beans averaging as large as those of the large pole Limas, and whether used green or cured, they are of superb quality—tender, rich and buttery, the true Lima flavor. In the green state their tender freshness is maintained beyond the ordinary, accounted for by the pods being unusually fleshy and thick and the foliage luxuriant and sheltering. Other merits of this phenomenal Bush Lima are earliness, abundance and continuity of yield. First pickings fit for the table may be taken in the latitude of New York in July, and from that time until killed by frost a continuous supply of this most luscious of beans may be gathered.

Henderson's New Potato Early Russet.—Henderson's Early Russet we believe to be not only the earliest Potato grown but the best early Potato grown. It is a seedling of 1903, bred from two famous early varieties, and grown in Maine, the "potato paradise," which produces the best seed Potatoes in America. In earliness Henderson's Early Russet leads the field, usually being large enough for cooking in 8 weeks from planting, and in 9 to 10 weeks is fully matured. It is a very handsome Potato of rounding, oval form, very uniform in shape and size, averaging 4 to 5 in. in length—sometimes larger, seldom smaller. The eyes are on the surface and very shallow. The skin of creamy buff is netted golden russet, Nature's hallmark, as all critics know, of Potato quality—which axiom is fully sustained in Henderson's Early Russet.

for the flesh is fine-grained, as white as snow, cooks dry and floury, "sheds its jacket" when boiled, and its flavor is particularly mild and delicious. The vines, while of neat, compact, upright growth, make large, healthy foliage which has so far proven blight proof. The tubers grow bunched compactly in the hill, permitting close planting, rows 2 to 2½ feet apart and hills 9 to 10 inches apart, with only one eye to a hill. Under this method the Potatoes will grow as nearly alike as peas in a pod and yield surprisingly large crops. Not the least of the merits of Henderson's Early Russet is its wonderful keeping quality. Although it matures so early, yet it will keep—properly stored—in prime condition, firm and plump, until June.

Double Self-Seeding Petunias.—This new German strain is unique from the fact that the double flowers produce seed insuring a larger percentage of double flowering plants (about 60%) than can be raised from singles artificially pollenized from double flowers which is necessary in producing all other double Petunias from seed. The flowers of these Double Self-Seeding Petunias are large—double—and include a variety of different colors.

Adnet's New Gerbera Hybrids.

—*Gerbera Jamesoni*—The Scarlet "Transvaal Daisy" has for a decade been a popular plant for greenhouse culture, producing in perpetual succession throughout the year and for several years, large, gracefully petaled, Marguerite-like flowers, 4 in. across, of vivid orange-scarlet on stout stems 12 to 18 in. in length. These new hybrids, created in France by Moas Adnet, were the sensation of the European floral world the past season, receiving great distinction wherever exhibited, including highest awards at the Paris, Berlin and London flower shows. These Gerbera hybrids possess the characteristics of the parents (*G. Jamesoni* × *G. vividiflora*) with added merits; they are hardier, make showy specimens in pots, flowering profusely in any window or conservatory where Carnations or Geraniums thrive and they even luxuriate in the garden during Summer in warm, sunny positions where they will produce a wealth of bloom from June to September. The colors include a galaxy of incomparable delicacy and richness, in which an infinity of tints, from pure white through yellow, orange, salmon, rose, cerise and ruby red to violet are represented. Sometimes the coloring of the disk differs from that of the rays. These superbly beautiful, large, long-stemmed flowers are unsurpassed when cut for bouquets and other artistic decorations; being of solid substance, they maintain their freshness for days and if the stems are in water they last for two weeks. They are easily grown from seed—and although half-hardy perennials, will commence blooming the first season; the older plants will of course produce the greatest abundance of bloom; therefore for garden culture the plants may be wintered over safely in coldframes with Pansies, Bellis, etc.

Lobelia Erinus Compacta (Snowball).—New, pure white. This charming Lobelia forms compact little bushes about 6 inches high, which are fairly sheeted with bloom throughout the season. Highly desirable for edgings, ribbon bedding and garden decoration as well as for pot culture. They flower the first season from seed.

Lobelia Illumination.—A magnificent new hardy perennial, the result of a cross between our native cardinal flower, *L. cardinalis* and *L. Queen Victoria*. It grows only about 2 ft. high, each plant producing but one flower stem, strong and broad, a massive shaft compactly clothed with brilliant scarlet flowers. A group against green foliage is of striking effect.

The New Giant Moon Flower (*Ipomoea maxima*).—A greatly improved variety of the popular Moon Flower Vine, producing much larger flowers and in greater profusion. If grown in well enriched soil, in a warm sunny location, and given sufficient water while making growth, the vine will attain a height of from 60 to 75 feet during the Summer season, and be covered with large lush green heart-shaped leaves which will be studded from July until frost with immense saucer-shaped flowers 7 to 8 in. across, and as glistening white as disks of white satin. They are also softly fragrant. The flowers open about sunset and close the next morning. The effect, particularly on moonlit nights, is entrancingly beautiful.

Sweet Pea George Washington.—This glorious crimson scarlet self we believe surpasses all the world's Sweet Peas of similar coloring in size of flower, form, substance and in brilliant purity, untarnished by burn or scald, though grown in shaded under most trying sun. The flowers of gigantic size are true Spencers, having round, open standards pleasingly undulated from throat to border. The waved wings also are of huge size and gracefully poised over the keel, almost hiding it from view. These gorgeous blossoms are borne usually in fours, but sometimes in threes, on strong stems 10 to 12 inches in length. The plants of exuberant, healthy growth display such a continued profusion of bloom they appear for weeks as if mantled in richest scarlet.

Sweet Pea Martha Washington.—A radiantly beautiful new Spencer Sweet Pea, most daintily colored pearl white from throat to center, then appears a veiled flush of pink deepening in intensity as it merges into the marginal zone of soft tyrian rose. The standard and wings are adorned alike, front and back being tinted and colored just the same, a remarkable and pleasing characteristic; thus the flowers present the

Double Self-Seeding Petunia

same exquisite color effect whichever way they face, in vase, bouquet or on the plant. The flowers, of lasting substance, are perfection in form and of the largest size, standards upright, open, well rounded out and beautifully waved. The wings are also very large, gracefully waved and poised, almost enclosing the keel. Usually four of these peerless blossoms are carried, well arranged on long strong stems. They vase charmingly and where shown have elicited enthusiastic encomiums. The plants are luxuriant, healthy growers, blooming long and in prodigious profusion, producing more four-flowered stems than any Sweet Pea we know of. A group of plants in bloom is a picture decidedly decorative in any garden.

Novelties for 1910 Offered by H. F. Michell Co., Philadelphia, Pa.

Michell's Purity Aster

Our special strain of this valuable florists' Aster has been greatly improved since its introduction; its pure white, perfectly double flowers, which are produced on long stems, make it a valuable addition to the list of Asters for cutting.

Michell's Improved Semple's Branching Aster

Our improved strain of this well-known and popular late branching Aster has been obtained by carefully selecting each year, for stock seed, flowers of the largest size, most perfect form, and with full double centers, as well as those produced on long stems.

Novelties and Specialties Offered by Peter Henderson & Co., New York—Concluded

Specialty by Thomas J. Grey Co., of Boston, Mass.

Stock of Nice "Abundance."—A remarkable and valuable new type of the Giant Nice or Continuity Stocks, possessing the same continuous flowering qualities and producing even a greater abundance of bloom which with the half-dwarf branching style of growth render it phenomenal. The plant does not make a leader or central spike but forms 12 to 15 sturdy main stems which again ramify into 15 to 20 side branches or from 180 to 300 stems and branches to a plant all carrying a wealth of superb double fragrant flowers, colored carmine rose, well grown specimens measure 2 ft. across each way. Imagination can scarcely picture the magnificent effect.

New Hardy Rose Dr. W. Van Fleet.—Dr. W. Van Fleet, the parentage of which is Souvenir du Pres. Carnot × Rosa Wichuraiana, bears flowers which, when open, run four inches and over in diameter. The center is built high, petals beautifully undulated and cupped. The color is a remarkably delicate shade of flesh pink on the outer surface, deepening to rosy flesh in the center. The flowers are full and double, of delicate perfume, buds pointed, stems 12 to 18 in., and fine for cutting. The foliage is a peculiar shade of bronze green, large and glossy, with spines a bright bronze red. The variety is a vigorous grower, immune from mildew.

New Hardy Rose Silver Moon.—Silver Moon is the result of a most interesting cross, Rosa Wichuraiana × Rosa Sinica—Cherokee Rose. The flowers run 4½ in. and over in diameter, clear silvery white in color, petals of great substance and beautifully cupped. The center is filled with bright yellow stamens, a very attractive feature. It is very floriferous, the plants literally covering themselves with great Clematis-like flowers. They are borne on strong stems, 12 to 18 in. long, and are delicately fragrant. The foliage is large and abundant, a pleasing shade of bronze green, glossy and immune from mildew.

New Hardy Ever-Blooming White Rose, Priscilla.—An American raised seedling, a cross between Kaiserin Augusta Victoria and Frau Karl Druschki.

The color is a clear white, the buds are large and of fine shape, the open flower is double, and of ideal form. They are borne singly on long stems and are held upright; foliage plentiful, dark green and highly polished, delightful fragrance. We control the entire stock of this grand new Rose and offer it with every confidence that it will prove to be the most valuable white, ever-blooming hardy Garden Rose ever introduced.

New Hardy Ever-Blooming Pink Rose, Abundance.—A valuable new Rose of dwarf, compact habit and remarkably prolific in bloom. This is a cross between Clothilde Soupert and Souv. du Pres. Carnot and partakes largely of the habit of the first mentioned. The flowers are a pretty shade of pink, full and double. On account of its compact habit and freedom of bloom it will be in demand for planting on the borders where taller sorts are grown, also for low hedges. For growing in pots it will be equally valuable.

Cineraria "Grey's Prize Strain"

The Thomas J. Grey Co. of Boston, Mass., have for many years devoted the most painstaking care to their selections of the so-called florists' flower seeds. Grey's prize strain of Cinerarias has certainly earned just praise wherever thoroughly tested. The individual flowers often measure from 3 to 4 in. or more in diam., and in color are most rich and brilliant. The plants are of very compact and branching habit, and as will be seen by the illustration the heads of bloom are enormous.

Besides Cinerarias, this Company have also made specialties of Primula Chinensis and Cyclamen. It may be added that their whole line of flower seeds are noted in the East for superior quality.

Novelties and Specialties ^{Offered by} Arthur T. Boddington, New York

Novelty Gigantic Orchid-Flowering Sweet Peas for 1910

George Stark.—F. F. C. and silver medal, 1908, England National Sweet Pea Society's Trials, Reading; F. F. C., Wöverbampton; F. F. C., Norwich. This variety is the finest scarlet Pea yet in commerce. The flower is bold and has extraordinary substance. The standard is nicely waved and upright, but owing to the thickness of the petal is not so crinkled as some of the Spencers. Both for exhibition and decorative purposes it is good, also stands the sun perfectly.

Marie Corelli.—The large flowers are brilliant rose-carmine or red, uniformly of true Spencer form. The wings are a pure, rich rose-carmine, while the standard shows a tint of cherry-red. The whole effect is that of a brilliant crimson, clear, distinct and most beautiful. The standard is large, round and wavy; the wings are full and inclined to remain boldly outright instead of drooping. Marie Corelli is a variety that belongs in all first dozen sets, and will become one of the standard shades in Spencers.

Senator Spencer.—The color is a varying combination of deep claret and chocolate, striped and flaked on a ground of light beliotrope. It is of the true Spencer form, wavy edges on both standard and wings; large, round, fluffly standard, long drooping wings. Both standard and wings are marked with the same colors and in the same way, with a trifle more of the wine shading in the wings. There are usually four good, large, finely formed flowers on each stem.

Miriam Beaver.—In shape, size, graceful arrangement on the stems, free blooming and seedless nature, it is in all respects the same as Countess Spencer. Its novelty is its color—a glowing but soft apricot, tinted, shaded and suffused with lemon. A little variation, perhaps, with a tint of salmon, deeper by a trifle on the back of the standard, but practically a self color. The

color might be said to approach a terra-cotta tint, especially so as it harmonizes so beautifully with golden brown.

W. T. Hutchins.—This is a fine, bold, true Spencer of most perfect form and coloring. The buds show a decided buff color. The fully expanded color has the appearance of light apricot (distinctly lemon at the throat), overlaid with a beautiful blush pink. As the season advances, the blush-pink shading becomes rather more pronounced. The vigorous vines flower most freely; the stems are long and carry well three or four fine flowers. Both standard and wings are wavy, ruffled and crinkled of the most advanced Spencer type. The flowers are of the largest size; the standard measures 2 in. across by 1½ in. deep.

Snowflake.—A grand white variety of the Spencer type, described to us by the originators as an improved white Spencer. Immensely floriferous, sturdy and strong grower, with an average of four flowers to the stem.

Gerbera Jamesoni Hybrida.—H. H. P. First raised by Mr. Lynch, curator of the Botanic Gardens at Cambridge, England, by hybridizing the Gerbera Jamesoni from the Transvaal with *G. viridifolia* and then recrossing the progeny. Mr. Lynch added to the brilliant orange-scarlet of the type a series of fine new colors, including pure yellow, orange, salmon, rose, cerise and ruby red to violet. This variety is somewhat harder than the parent form. When sowing, it is recommended to place each seed with the pointed end upward, just above the surface of the soil.

Impatiens Oliveri.—T. A. This grand Impatiens was introduced recently from British East Africa and has caused quite a sensation in Europe, where it has been exhibited. The plants are very vigorous and produce during the Summer, in the open ground, a profusion of flowers of a delicate pink color. It resembles in color and form the beautiful Orchid Miltonia vexillaria. This also makes an excellent house or greenhouse plant for Winter use.

Leucanthemum Maximum Semiplenum (The Semi-double Shasta Daisy).—H. P. This is a grand type of the Shasta Daisy. The flowers are quite large, with three to six rows of ray florets; are snow-white with a small yellow disk. The stems are long and wiry. It will make an excellent companion for the single Shasta Daisy, and is perfectly hardy. It is strongly recommended as a cut flower.

Salvia Splendens Nana Compacta Triumph of Italy.—This is a grand Salvia from Italy; the novelty is its unique color which is a splendid vivid rose-lilac. The plant grows to about 20 in. in height, is free flowering and compact in form, an excellent bedding variety.

Salvia Patens Compacta Nana.—This novelty is a great improvement over the well-known Salvia patens. The very robust-growing plants are extremely free flowering. If sown early under glass, the plants, which grow to a height of 18 in., begin to bloom in early July. On account of the very compact and regularly formed plants, it produces an unusual number of flower stems, on which you will always find from three to five open flowers. The plants are so much more compact and dwarf than the type that the flower stems are considerably longer and freer, surmounting luxuriant dark green foliage. On account of the rare color, namely, navy blue, this novelty, no doubt, is extremely desirable and should be one of the best Fall flowers for the garden.

(Concluded on page 361)

Sweet Pea George Stark

Aster Hercules (Rosy Lilac).—This grand novelty is the first break from the Grand White Hercules Aster which we introduced some years ago. The color is a splendid delicate rosy lilac. The plants are compact and semi-dwarf, not exceeding 15 to 20 in. in height. In addition to the enormous flower of the main stem, this Aster produces five to six long-petaled lateral flowers, measuring 5½ to 6½ in. across, of the most perfect form. The Hercules Aster is one of the grandest varieties of the Giant Hobenzollern type ever introduced, and we are sure that it will find favor with all lovers of good Asters.

Begonia Boddington's Crimson Bedder.—H. H. P. A new strain, with small foliage and glowing scarlet-crimson flowers; as a bedding plant this variety is worth growing for its rich russet-crimson foliage only.

Cleome Gigantea Hybrida.—These are new hybrids of the well-known Cleome gigantea from South America. The plants vary in color from pure white to lilac, pink and purple. Sown during the early Spring, these hybrids reach the height of nearly 6 ft.

Glaucium Sutton's Scarlet (Horned Poppy).—H. A. Height, 2 ft. Quite the brightest color of all the horned Poppies. The large flowers are of a brilliant orange-scarlet; succeeds well as an annual, but an Autumn sowing gives the finest specimens.

Group of Cut Asters Grown from Boddington's Famous American Strains, at the Summer Exhibition of the Croydon Horticultural Society, London, England, From Seed Supplied Exclusively by Arthur T. Boddington

Novelties Offered by W. Atlee Burpee & Co., Philadelphia

Wherever the above name is mentioned the mind instinctively reverts to "Seeds that grow." That the business of this well-known seed house continues to expand is evident from the fact that Mr. Burpee recently announced that more and still more room was needed and plans have already been made to take over the real estate recently purchased, which includes all the property north on York ave., also the building on North Fifth to Buttonwood sts., which with the warehouses now occupied give an additional frontage of 280 ft.

Howard Earl, who is as much a part of the Burpee establishment as are the seeds, enters with great enthusiasm on the subject in which he is so well versed, and was courteous enough to give to the writer, for publication in *The Florists' Exchange* exclusively, two of their prize-winning photographs, Burpee's New Earliest Catawba Corn and Burpee's Unique New Tomato, "Dwarf Giant," showing 52 perfect fruit of this nearly seedless variety. Speaking of these two photos, (reproduced in this issue), Mr. Earl says they fully prove the possibilities of these two vegetables, even to the most skeptical.

To name or describe all the seeds handled by this concern would fill four such papers as *The Florists' Exchange*, so that at this time a general idea only can be given. No line of vegetable seed is allowed to suffer for want of suitable varieties to meet the various wants of patrons, who write from all parts of the globe, and nothing is listed in the catalog (sent upon request) that has not already been tried out in the trial

Burpee's Unique New Tomato Dwarf Giant

grounds at Fordhook, to visit which farms in the Summer time is a trip equal to a week's vacation. Systems are in vogue there which not only result in the best possible production, but which also result in the elimination of all unnecessary and useless varieties, many

of which, although they prove a partial success, but cannot be depended on to meet with universal satisfaction, are promptly discarded.

Contracts are let for the growing of seeds of every kind, to men who are peerless in their class, and of late years these contractors have proved their value by producing seeds which, wherever sown, give the best satisfaction. It is generally known that, in order to produce seeds in quantity sufficient to enable the firm to fill its ever-increasing orders, thousands of acres would be needed, while the idea of growing all varieties of plants for seed would entail the employment of an army of experienced help, thus the plan to distribute these contracts to specialists, each in their line, has proved very beneficial, not only to the firm, but to its patrons, who are thus assured that every packet is filled with the best seeds obtainable, grown in soil and climates best adapted for them.

The recent establishment of a new farm at Lompoc, Cal., for the obtaining of seed for which that State is famous, and which has been placed under the supervision of Edwin Lonsdale, is another step in the right direction and furthers the policy of the firm in securing "Seeds that grow."

No one seed can be said to receive more attention than another at the hands of the Burpee Company unless it is the Sweet Pea. The

Sweet Pea Marie Corelli

Novelties and Specialties Offered by Vaughan's Seed Store, New York and Chicago

Carpinteria Pole Lima. Natural Size

New Green-Seeded Pole Lima Carpinteria.—The most perfect pole Lima Bean. The distinctive feature of this new Bean is the green tint on the Bean, which color it retains in the dry or ripe state to a greater extent than usual. The green color in Lima Beans is indicative of fine quality, and this new sort possesses the desirable qualities looked for in pole Limas more than any other pole Lima Bean now before the public. Prolific as any white Lima; the vines are very strong, vigorous in growth, with many large runners or branches on which are produced an immense quantity of pods, filled with three to four, usually four, large, broad beans. The seed or bean is broad, much thicker than the ordinary pole Lima, and comes nearer to having every bean perfect than any other pole Lima. The Carpinteria Green Seeded Large Lima originated with Henry Fish of Carpinteria, California, in 1906, as a sport in a crop of bush Lima Beans. Mr. Fish recently produced two notable dwarf bush Lima Beans.

New Rambler Rose Lady Gay

Dimorphotheca Aurantiaca, The Golden Marguerite.—A rare and extremely showy annual from South Africa, soon to become a great favorite on account of its very easy culture and beautifully colored flowers. The plants grow 12 to 15 in. high and are very profuse in flowering. Its Marguerite-like blossoms, 2½ to 2¾ in. in diameter, show a unique glossy rich orange gold, which brilliant coloring is rendered the more conspicuous by the dark disk surrounded by a black zone. Well adapted for groups or borders, it produces its pretty flowers very early after being planted out in the open ground in sunny situations and will continue to flower during the Summer months. A bed in full bloom is a magnificent sight on bright days.

STOCKS

Prince Bismarck, Goldball.—For a cut flower grower this is the best novelty. Bismarck Summer Stocks grow into pyramidal bushes about 3 ft. high, with magnificent flower heads which are very large and canary yellow. It blooms throughout the whole Summer and continues until late in the Fall.

Prince Bismarck, Lavender.—Like the above but a beautiful lavender.

New Stock Prince Bismarck

Prince Bismarck, White.—This new Stock is of robust pyramidal growth, attains a height of 30 in., produces many flower spikes covered with large, pure white double flowers. The plants begin to bloom when other 'Ten Weeks' Stocks have stopped blooming, continuing until late in the Fall. The percentage of double flowers is larger than that of any other Stocks. Our illustration is produced from a plant that was taken from a closely planted bed. If sufficient room is given, the plants develop to enormous dimensions, forming magnificent bushes with long and large flower spikes.

New Rambler Rose Lady Gay.—A seedling from the popular 'Crimson Rambler', which it resembles in habit and hardiness. The flowers are of a delicate cherry pink color, changing to a soft white. Rich glossy foliage. The effect of a plant in full bloom, with the combination of the soft white flower, the cherry pink buds, and the deep green foliage, is superb. The plant is a vigorous grower and perfectly hardy. The flowers are very numerous and of good size; they are also delicately perfumed. This is a Rose of highest merit, equal in all ways, and in some superior to the 'Crimson Rambler'. This is a new color in a Rose, which will endure. It forces well and made a grand display at the Boston Rose Show.

Forget-Me-Not Ruth Fischer.—It is of particularly neat and compact habit and the lovely flowers shoot up strongly over the glossy dark green foliage. Displayed in large corymbs, they measure about half an inch across, and are therefore larger than those of any *Myosotis* hitherto known. The color is a pure Forget-me-not blue. Ruth Fischer can be easily forced, and not only sells well as a pot plant, but is also excellent for cutting and for planting in hanging baskets.

Little Marvel Pea

Peas, Little Marvel.—A new early dwarf Pea which is surely going to take a place ahead of the popular Nott's Excelsior and American Wonder sorts. The season is the same as the above mentioned kinds. While the pods are larger, the peas are quite similar; they usually run, however, two to a pod more than Nott's Excelsior, and are of equal, if not superior flavor. The vines are wonderfully prolific and bear a heavier crop than the two older sorts. Added features of great value are: pods are a dark green color, and both the pods and the peas keep in edible condition at least a week longer than Nott's Excelsior, which must be eaten within three days when ready.

Shasta Daisy, Burbank's New Double Fringed.—This new one is an absolute perpetual bloomer throughout the whole year wherever it has a chance. In fact, the blossoms must be cut or it will blossom itself to death. The blossoms can be cut by the armfuls. About one-third will come double, balance extremely large single fringed flowers.

Petunia Hybrida Norma.—A small-flowered Petunia forming medium-high, compact bushes covered with numerous blue flowers, regularly star striped with white during the whole Summer. For decorating verandas or for bedding of great value.

Petunia Norma

Novelties and Specialties Offered by Burnett Bros., New York

Burnett's New Cabbage "Bass Rock."

As a second early variety this Cabbage has no equal. It matures a few days later than Early Summer, is much larger and a sure header. For quality and evenness in size it is, without doubt, the finest of the flat-headed type grown either for Summer or Winter use, being absolutely perfect in every respect.

Cucumber, Burnett's "North Pole."—We claim that this variety is one of the finest in existence and cannot be excelled for exhibition or private use. It is most prolific, the fruit smooth and of dark green color, medium length, excellent form and exquisite flavor.

Leek, Waverley Market.—A grand exhibition variety with long, thick, snow white stems. Waverley Market grows to an immense size, with dark green leaves, thus differing from all other varieties. It is hardy and productive, a good keeper and of excellent flavor. Waverley Market is superior to any Leek yet offered.

Cauliflower, Snowball, "Burnett Selected Strain."—No other Cauliflower at the present time is so widely known as Snowball, having supplanted all other sorts for early and late planting. For forcing under glass and growing in frames for early use it has proved superior to all. Its dwarf, compact habit and short outer leaves allow it to be planted closer in the same space of ground than other varieties. Heads pure snow white of the finest quality. Our strain of Snowball we can recommend with the utmost confidence.

Burnett's New Cabbage, "Bass Rock"

Onion, Burnett's "Enormous."—In introducing this new variety we have confidence that it is the best ever offered. Its enormous size and superb quality will no doubt make it a decided acquisition to the exhibitor. The skin is pale, straw-colored; flesh snow white, of firm substance, and delicate flavor; an excellent cropper, and without doubt the premier Onion of today.

Burnett's "Enormous" Onion

Burnett's New Tomato "Liberty."—Tomato Liberty, introduced by us two years ago, holds undisputed reputation as the best main crop variety in cultivation. It was largely grown last year by many competent private gardeners throughout the country, who claim it to be one of the finest novelties ever offered. It is an exceedingly heavy cropper and bears abundantly until very late in the season. The fruit is of a glossy red color, of immense size, perfectly round, uniform in shape, solid and meaty; of superb quality, with few seeds and borne in clusters of from 8 to 10 large Tomatoes. Liberty has won prizes and certificates of merit wherever shown and will be found the leading variety for exhibition purposes. All our patrons who have grown Liberty claim it to be entirely distinct and far superior to all other sorts.

Tomato, Burnett's "Red Ensign," an Ideal New Forcing Tomato.—The fruit is of rich crimson color, delicious flavor, and free from the hard core so frequently found in Tomatoes. Red Ensign is one of the earliest and most prolific, the fruit hanging in broad, handsome sprays, of medium size, not too large or too small and remarkably even. We can thoroughly recommend Red Ensign as the best for forcing purposes, possessing all the good points that a Tomato should have.

New Parsley, Burnett's Emerald Isle.—This Parsley is of a beautiful dark green color and more densely curled than the older sorts. The plant is dwarf and very compact, making it most desirable for planting indoors, or for a neat border in the vegetable garden. Statistics received last season show that Emerald Isle, planted at the same time and under the same conditions, germinated quicker than any other variety.

Brussels Sprouts, Burnett's Supreme.—The finest selection offered. Seed saved from perfect specimens, producing large, solid sprouts, which are firm and do not burst, of delicious flavor; the growth is dwarf, robust, compact habit, and very hardy. This variety cannot be surpassed for exhibition purposes.

Beet, Burnett's Improved Crimson Globe.—An exceptionally fine early Beet of medium size, with small tap root, of uniform shape and deep crimson color. It is sweet, tender, a good keeper and far superior to any other variety for table use.

Burnett's Exhibition Strain Cineraria

Cineraria Hybrida, Burnett's Exhibition Strain. Our strain of this highly prized greenhouse plant we can recommend as being superior to any other. The seed is selected with the utmost care by one of the leading growers in Europe, who has made wonderful improvements in Cinerarias within the past few years. The plants are of compact growth, with fine cut foliage; flowers perfect in form, embracing all the most beautiful and delicate shades.

Stock, Burnett's Perpetual White.—This magnificent Stock has given splendid results wherever grown. The seed is saved from plants grown under glass and is certain to produce over 75 per cent, double flowers. The plants grow from 2 to 2½ ft. high and throw up a main flower spike of from 12 to 18 in. long. For forcing purposes this Stock is unrivaled.

Pansy, Burnett's Gorgeous Strain.—The seed offered by us of this grand mixture contains a most beautiful collection of colors and markings not found in any other and we are confident that for perfection of form, firmness of texture, freedom of bloom and beauty of shades, it excels all others.

Pepper, Burnett's "Monarch."—An extremely large and handsome Pepper, of a bright scarlet color; flesh thick, very mild and remarkably sweet, without the least trace of fierceness. This Pepper is much larger, more uniform in shape and superior in quality to any now on the market; an ideal variety for exhibition.

Burnett's Gorgeous Pansy

Early Snowball Cauliflower

New Lettuce, Balmoral.—In recommending this grand new early head Lettuce we can safely say that for forcing or outside planting it is unequaled. The heads are of medium size and very solid; outer leaves light green with golden yellow heart. It is crisp, tender and of perfect quality. Give it a trial and prove its excellence.

Balmoral Lettuce

Salvia, Burnett's "Forest Fire."—For effect Forest Fire is unsurpassed. The plant, when in full bloom, is about 3 ft. high. The individual spikes, which are of a brilliant scarlet, measure 6 in. across and are produced in such quantities that they wave gracefully with their weight, giving the plant a glistening appearance. For massing or planting in groups Forest Fire is the most effective.

Novelties and Specialties Offered by H. E. Fiske Seed Co., Boston, Mass.

Cucumber, Forcing White Spine.—This seed is all grown in the vicinity of Boston, where "Hothouse Grown Cucumbers" are produced in abundance and to perfection. This strain has been with one of our leading market gardeners for several years, and it is his own selection, from the point of prolificness and uniform shape. It is longer than the ordinary forcing strains and is very dark green, slightly spined. It is excellent for shipping, holds its color, does not have that faded-out appearance. It is a strong grower. The average length is about ten inches; holds its color and brittleness long after being cut; makes it a superior variety, as its size and appearance make a demand.

Pea, Golden King. A new wrinkled Pea with golden yellow pods. The originator says: "This new Golden-podded Pea, which I have raised and cultivated for four years, cannot fail to occupy a prominent place. It is not only a new, but also a really good thing, and apart from its startling beautiful appearance, it belongs to the highest type of our present-day wrinkled Peas. The plant is 4 ft. high and perfectly even, healthy and vigorous of growth, with bright green vines and foliage. The pods are of a uniform, shining, deep golden yellow color, with the characteristic mark of a sharply defined bright green line along the seam. They are fully as large and plump as those of the Telephone Pea, and contain eight to nine large green wrinkled peas of that superior flavor belonging

to the Telephone and Duke of Albany type. It matures at the same time as Telephone. Golden King Pea comes perfectly true from seed, producing no sports whatever and making a remarkably even and uniform crop."

Pea, Violet Podded Negro.—We have never grown this Pea on our trial grounds, but we take the description given us by the introducer, who says: "I noticed some years ago among my Pea trials an exceptionally vigorous and productive plant, bearing pods of a deep violet tint, which stood out in bold relief from the green foliage. I saved the seed, and afterward selected the produce and the careful examination I have made of this Pea confirms my belief in its good qualities. Although the pods are of a purplish violet the peas are green. The distinct color is helpful in gathering the Peas, and one is sure not to leave any pods on the plant. The vines are about 3½ ft. high, bearing pods that are about 2½ in. long, and well filled with peas very tightly packed; the pods are always borne in couples. It is of good quality and very productive. It is not only a curious variety but a meritorious one which will quickly take its place in all the vegetable gardens."

Beets, Crosby Improved Egyptian.—This is the best extra early variety grown for this market. Has a small top and excellent form and a small tap root: is in every way a great improvement over the old variety of Egyptian Beet. It was improved by the late Josiah Crosby of Arlington, Mass. Our stock is all grown with great care as to truthness of shape and color.

Beets, Crosby Improved Egyptian. (Special Market Gardener's Strain.) Selected with the greatest of care as to color, shape and earliness.

Bean, Worcester Pole. For the market gardener the best Pole Bean in cultivation. Originated in Worcester, Mass., where it was grown for several years by one of the leading market gardeners there. They will command from twenty to twenty-five cents more per bushel than any other variety of Pole Beans. A vigorous grower and very productive. Pods are very large, exceedingly bright and hang in clusters. As a Shell Bean it is unequalled for tenderness. Dry Beans splashed bright red.

Cabbage, Savoy, Globe Curled.—The favorite for market gardeners. Leaves are wrinkled and dark green. Heads very hardy and improved by frost. Excellent quality and sure header.

Sweet Corn, Crosby Extra Early, or Boston Market. (Josiah Crosby Strain.) Excels in quality the extra early varieties. Ears are rather short, averaging from twelve to sixteen rows of rich sugary flavor; very productive. One of the best for canning, and we believe without a rival in the extra early varieties.

Carrots, Danvers Half Long Improved (stump root). For a general crop the best; the largest yield; the most profitable for the market gardeners. Roots medium length, deep orange, tapering uniformly to a blunt point; smooth and handsome. Flesh sweet, crisp and tender. The Danvers Half Long originated in Danvers, Mass., where the raising of Carrots is a specialty. It is now grown largely everywhere on account of its great productiveness and great adaptability to all classes of soil. Great care has been taken in the selection of roots for seeds.

Celery, Boston Market. It is superior in quality to all other varieties, and is very popular with the market gardeners. It is unexcelled for its tender, crisp and succulent stems and its peculiarly mild flavor. It forms a cluster of heads instead of a single large one. It must be blanched by earthing up at least four or six weeks.

Field Corn, Longfellow. Very largely grown in New England; is eight rowed, yellow kernel and good size. Cob is quite small and ears are from 10 to 15 in. long. Ripens excellently in Massachusetts.

Lettuce, Hittenger's Belmont. An excellent forcing variety, dark green leaves and almost a sure header. One of the largest plain leaf heading varieties.

Globe Curled Savoy Cabbage

Onion, Ailsa Craig.—This is one of the largest Onions grown. It is a very handsome, oval-shaped Onion, with pale straw-colored skin. For exhibition it is unexcelled. In England it is the most popular large Onion grown. To attain its largest size it should be sown early in the Spring in the hotbed and later transplanted in the open ground. Under the same conditions bulbs are produced which are much larger and more shapely than the Prizetaker. For so large an Onion it is an excellent keeper, a large yielder, and for those who like onions raw we can highly recommend the Ailsa Craig, on account of its mild and acceptable, pungent flavor. Market gardeners who have started this Onion early are able to compete successfully with the Imported Spanish Onion. Our seed is all grown in England from selected stock.

Full Measure Beans.—The plant is hardy, prolific and produces the pods early, following only a few days after the Burpee's Stringless Green Pod. The pods are long, straight and handsome, are meaty and good quality; is very thick, flat or almost a semi-round. The pods are stringless, very productive. Quality, stringless and productiveness should be sufficient to recommend this to every planter.

Golden King Peas

Longfellow Corn

Novelties and Specialties Offered by Wm. Elliott & Sons, New York

Antirrhinum Majus Ruby.—A strikingly beautiful new variety and main color of the very popular Tall Snapdragon. The flowers are self-colored, bright ruby red, and of surprising effect. This novelty is at the same time a charming plant for tall beds and groups, and highly valuable as a cut flower.

Antirrhinum

Brachycome Iberidifolia Little Blue Star.—This charming annual will be found a grand addition to the bedding section. The flowers are of a beautiful bright blue, star shaped; very effective plants, compact and free flowering. A great improvement on the old variety *B. iberidifolia*.

Thick-fleshed Large Scarlet Pepper (Capsicum Glory)

Pepper Capsicum Glory.—The feature of this novelty is the thickness of the flesh of the fruit. The fruit surface is perfectly smooth and free from wrinkles. Mild in flavor, and of a brilliant deep scarlet cover, the fruit is excellent for salad as well as for the usual culinary purpose.

Myosotis, Ruth Fischer

are large and beautifully striped golden on brown. The plant is of compact habit and very showy.

Myosotis Ruth Fischer.—Plants of particularly neat and compact habit. The dark blue flowers measure $\frac{1}{2}$ in. across and shoot up strongly over the glossy dark green foliage. Excellent for pots as well as for bedding.

Ricinus Panormitanus.—A cross between *R. Cambojensis* and *R. Zanzibarensis* combining the colors of the former and the gigantic dimensions of the latter. The plant has a noble upright habit, and when fully developed forms a huge symmetrical bush of wonderful ornamental aspects.

Marigold Single Grandiflora Beauty.—The flowers

Stokesia Cyanea

Begonia Gracilis Luminosa.—Large, bright, deep scarlet flowers and magnificent satiny, brownish red foliage.

Begonia Gracilis Prima Donna.—This variety was obtained by crossing *B. semperflorens* White Triumph with *Gracilis Luminosa*. The plant is of very sturdy and even habit, growing to about 10 ins., and forming a freely branching bush, 10 to 12 ins. across. The characteristic feature is its uncommonly large flowers which are of a limpid rose, shading to carmine toward the center. Extremely early variety and comes true from the seed.

Gypsophila Elegans Carminea.—A carmine flowering variety, much brighter than the old variety *G. elegans rosea*, a great improvement. The plants grow from 10 to 12 ins. in height and are covered with bloom. Very useful for bouquets.

Stokesia Cyanea (Cornflower Aster).—This is not new, but is a rare and beautiful hardy perennial; it is well worthy to be classed as one of the season's best specialties. The plant grows about 24 ins. high, each bearing from 20 to 30 handsome lavender blue cornflower-like blossoms; in bloom from July till frost. Indispensable for cutting.

Elliott's Early Snowball Cauliflower

Cauliflower, Elliott's Early Snowball.—An extremely early dwarf variety, producing magnificent white heads of the finest quality. The standard variety for general use.

Carrot, Elliott's Earliest French Forcing.—Earliest of all varieties, and especially adapted for forcing; delicate, fine grained and remarkably fine flavored.

Lettuce, Elliott's Hothouse.—This is the best variety for growing under glass; forms a large-sized head with a good solid heart, which is not liable to rot; delicately crisp, tender and fine flavored; combines all the qualities to make it the best Lettuce that can be grown.

Parsley, Elliott's Emerald Evergreen.—Distinct, handsome bright green, finely cut and very curled, mosslike leaves. Plant of dwarf habit, productive and unsurpassed for either private use or marketing.

Novelties and Specialties Offered by Ernst Benary, Erfurt, Germany

Lobelia Illumination

Lobelia Illumination.—This is a cross between *L. cardinalis* and card. Queen Victoria. It is dwarfier than the latter, hardly exceeding 2 ft. in height, and produces one very strong and broad stem only. The foliage is almost as dark as Queen Victoria. When the plant is 1 ft. high the glowing scarlet flowers commence to expand, and form a fiery, torch-like shaft of striking appearance.

Begonia Gracilis Prima Donna.—Obtained by crossing the white *B. semperflorens* Triumph with the dark red *B. gracilis luminosa*. The variety is of sturdy and even habit, and grows about 10 in. high, 10 to 12 in. across. It bears large flowers, of a limpid rose color, shading to carmine towards centers. The blossoms appear extremely early and make a free and continuous display. Superior for bedding and pot culture.

Begonia Prima Donna

New Ideas in the Manufacture of Garden Hose by
the Revere Rubber Co. of Boston

This well-known firm has placed on the market a garden hose known as "Revero," in the construction of which they have made quite a departure from old methods.

This hose has several new features not found in any other water hose, chief among which is the special double braided covering of tightly twisted cotton yarn which is applied over a seamless tube of very high-grade rubber. The braiding is of a special design and the fabric clings so closely to the tube that separation between it and the rubber is almost impossible. Outside of this braiding is the covering of tough flexible rubber which will withstand great wear and abuse. The hose is then vulcanized in patented moulds of the firm's own design under extreme internal pressure which thoroughly unites the rubber and fabric. "Revero" is the only hose that is made by this process, which gives it great flexibility and strength, with the minimum amount of weight, which is one of its principal claims for superiority.

Furnished in Continuous Lengths of 500 Feet

Old Style—Readily Kinks

The complete hose is vulcanized in our patented rigid moulds under a very high pressure. By this process the pressure exerted from the inside forces the rubber lining and cover through the fabric, when it is then vulcanized, thus making a compact, homogeneous body.

Advantages.—A combination of durability, strength and light weight with remarkable flexibility. It has no tendency to separate between the plies as does hose of the old wrapped duck construction, and less tendency to kink when bent at sharp angles. Furnished in continuous lengths, thus avoiding unnecessary couplings and loss from remnants. Uniform product throughout with no weak points to develop defects.

"Revero" Non-Kinking

Novelties and Specialties, Bridgeman's Seed Warehouse, Rickards Bros., Props., New York

Rickards Bros.' Ball of Snow Cauliflower.—The earliest Cauliflower in cultivation, producing the finest of snow white heads.

Rickards Bros.' Invincible Frame Cucumber.—This fine forcing Cucumber is a very prolific thin skin variety, ripening to the tip and of a fine deep green color, with very little neck.

Rickards Bros.' New Head Lettuce.—This is a fine variety for either outdoors or forcing under glass, producing fine, large, solid heads. Crisp and very tender.

Rickards Bros.' Forcing Muskmelon Elite.—A forcing Melon of superior quality, prolific and the proper variety for the epicure. Flesh beautiful orange, and flavor delicious.

Rickards Bros.' Improved Emerald Gem Muskmelon.—The strain of this popular Melon which we offer is the result of years of careful selection from Melons grown under glass, and we can assure our customers that its flavor is unsurpassed. We strongly recommend it for greenhouse culture.

Rickards Bros.' Extra Early Tomato.—A very fine, large, smooth, solid, bright red variety, of excellent quality, and very early. This is a grand variety for greenhouse culture, the fruit hanging in clusters. It is also very productive. We strongly recommend it for private use.

Rickards Bros.' Ball of Snow Cauliflower

Eschscholtzia Erecta Compacta. Dainty Queen.—The color is a tender blush or pale coral pink, slightly deeper toward the edges with a groundwork of delicate cream, and, like *Intus rosea*, is quite the same shade inside the flower as outside, so that the effect in color is the same when the flower is open as when closed, which is quite unusual in all other *Eschscholtzias*.

Rickards Bros.' Forcing Muskmelon Elite

Improved Primula Obconica Grandiflora Tuxedo.—This is certainly an improved strain of this grand flower and it took a special premium at the National Gardeners' convention, held in New York in 1909. Color beautiful lavender. We can safely recommend it.

Eschscholtzia Dainty Queen

Note These Advantages

1. A heavy seamless tube of high-grade rubber, of well-compounded stock that does not develop pin-holes or other defects.
2. A seamless braiding of special tightly twisted cotton yarn.
3. A layer of tough rubber friction that thoroughly unites the two braidings.
4. Second braiding of tightly twisted cotton yarn.
5. A seamless cover of tough durable rubber of a proper gauge to withstand abuse without sacrificing flexibility.

Phlox Stella

Novelty Offered by Ernst Benary, Erfurt, Germany

Dwarf Star Phlox Stella.—This is a variety with splendid bright scarlet flowers, a color strongly resembling that of the popular dwarf sort, *Fireball*. Suited both for dwarf groups and pots.

Specialties Offered by The Schlegel & Fottler Co., of Boston, Mass.

S. and F. Co.'s Yellow Globe Danvers Onions

This company has always made a specialty of those vegetable seeds for which the State of Massachusetts is rightly famous. For so many decades has such painstaking care been bestowed in making seed stock selections of Onions, Carrots, Cabbages, Beets, Sweet Corn, and other leading vegetables for the Boston market, that a state of perfection of type in these varieties has been reached that is almost unbelievable to those who have not closely followed the matter year by year. The following is a partial list of those vegetable seeds for which the Schlegel & Fottler Co. are noted:

Lettuce, Tennisball, Black-seeded.—The most popular for open air culture; it forms a handsome compact head, with very few outside leaves, and is crisp and tender.

Lettuce, Tennisball, White-seeded.—An excellent variety grown about Boston for forcing and heading under glass; good size, firm heads, and very white and crisp.

Onion, Yellow Globe Danvers. The variety most extensively grown around Boston, and in many other sections; an early round variety, with very small neck; ripens early, and very uniformly; yields large crops, and keeps well.

Beet, Crosby's Egyptian.—This variety is as early as the original Egyptian, but by careful selection has been made thicker and of better quality. For early use, either for market or for family gardens, this variety easily takes the lead. It is very popular among market gardeners.

Beet, Edmand's Turnip Blood.—Seed grown from originator's choice stock. This variety is thoroughly fixed and uniform in type. The flesh is deep blood-red in color and exceedingly sweet and tender. It is round, smooth, of good market size, and does not grow over large.

Cabbage, Fottler's Brunswick.—Introduced by us many years ago. A general favorite throughout the country; the earliest Drumhead of large size; small stems; sure to head.

Cabbage, Warren's Stone Mason.—An improvement on the old strain of Stone Mason; a strictly reliable variety, rounder in shape and very solid.

Carrot, Danvers Half-Long.—The best variety for general crop; is of rich color, and a good keeper; yields larger, and is easily harvested.

Celery, Boston Market.—The dwarf, branching variety grown so extensively about Boston. It is unequalled by any other sort, being solid, crisp and of excellent flavor; its compact, dwarf habit allows closer planting and requires less earthing up than taller sorts.

Sweet Corn, Early Crosby.—We offer the true Josiah Crosby stock only. Very dwarf, with ears set very low; ears twelve- to sixteen-rowed, of good size, with white kernels. Sweet and of excellent flavor. This has been for years the standard sort for the Boston market.

Sweet Corn, Potter's Excelsior (Squantum).—Medium late; grows to good height, and yields numerous ears; sweetest Corn in list; twelve-rowed ears of moderate size; requires liberal seeding as it is delicate as to germinating.

Cucumber, Arlington Extra White-spined.—A strain of White-spined which has been improved through many years of careful selection, with a view to use for forcing in hot-houses and frames. Our stock produces very handsome dark-colored Cucumbers, which excel in crispness and flavor.

Cucumber, Forcing White-spined (Private Stock).—One of the most valuable yet offered for forcing. It is also excellent for outdoor culture. It is somewhat longer than our Arlington Extra White-spined, and remarkably uniform in shape; color very dark green; flavor the best.

Parsnip, Arlington Long White.—The best variety for general use; long, smooth, and free from coarse roots.

Radish, Early Scarlet Globe.—An excellent forcing variety; brilliant scarlet; fine globe shaped, with small top. Very crisp and tender.

Spinach, Round Thick Leaf.—This variety gives the best results. The leaves are large, thick and somewhat crumpled, and it is equally good for Spring or Autumn sowing. Slow in going to seed.

Ruta Baga Turnip, Sweet German.—Rather more globe-shaped than White French, and has a coarser appearance; white-fleshed, and most excellent in flavor. The variety for which Cape Cod, Mass., is famous.

Chrysanthemum Mrs. Jane Cockburn

Five years ago the firm of Samuel Cockburn & Son, Woodlawn, N. Y. was fortunate in securing from its stock of Glory of Pacific 'Mums, a very fine sport, an illustration of which is presented herewith. The flowers of this sport, now named Mrs. Jane Cockburn, have been very favorably received in the wholesale market of New York, its shipping and keeping qualities being points highly in its favor. In color it is a deep pink, and on the exhibition table of the New York Florists' Club, it scored 79 points, commercial value, while at Philadelphia and Baltimore equally as good pointing was awarded it. From the appearance of a house of this Chrysanthemum in bloom last Fall the opinion is formed

Chrysanthemum Mrs. Jane Cockburn

that it is a variety which will figure conspicuously in the market, and among the growers, owing to its uniformity of growth, color, and easy culture. Its season of "finishing" is from Oct. 1 to 6, and even in well or fully developed flowers it maintains its color to the last. The petals have a quilled effect, and become reflex as the flower develops, as shown in the illustration. In height, the plants grow from two to two and one-half feet, making it very desirable for side bench planting, especially where headroom is lacking. The stock of this 'Mum is now being disseminated.

Gladiolus Fireside and Princess Sandersoni

These novelties are introduced by B. Hammond Tracy of Wenham, Mass. Fireside is a red variety of intense cherry shade and most excellent for massing.

Princess Sandersoni is an unusually fine variety, pure white, slightly penciled with crimson, and very graceful.

Other recent novelties in Gladioli introduced by Mr. Tracy are Harvard, an exceedingly large and beautiful crimson; Kathryn, a rich light heliotrope; Dawn, a beautiful rose pink of large size; and Maiden's Blush, a very large flesh-colored variety.

These two novelties were illustrated in our issue of July 31, page 142.

S. and F. Co.'s Danvers Half-Long Carrots

Novelties and Specialties Offered by Walter P. Stokes, Philadelphia, Pa.

Stokes' Bonny Best Early Tomato

Stokes' Bonny Best Early Tomato.—This variety has more than met my most sanguine expectations. It was offered for the first in 1907, and from every section where it was sent it has made good. It is fully ten days earlier than "Chalk's Jewel." It is a vigorous grower, enormously prolific and with splendid foliage, which will protect the fruits from the hot sun on days when other varieties, with less foliage, would scald. As a shipping Tomato it will be found to be one of the very best, as the entire picking will grade into the same crate, owing to its remarkable evenness of size. In color it is an intense velvety glowing scarlet, the very best color for the table or canning, and ripens evenly all over up to the stem. In shape it is beautiful, as can be seen from the illustration, roundish and slightly flattened at the stem end, but thicker through than most other Tomatoes of its class. This makes it a magnificent variety for slicing. Its greatest characteristic, however, is its marvelous uniformity of size and smoothness in shape. Stokes' Bonny Best Early Tomato holds its size clear up to the end of the season to a remarkable degree. Its smooth, even-sized handsome fruit is salable in market and satisfactory for your table long after most other

Tomatoes are down and out. It is a winner for the early, main crop and late markets.

Gladiolus Alice Carey

This is a Childsii seedling introduced by E. Y. Teas, Centerville, Ind., and is described as being the nearest pure white of any variety known. The flower is large, well expanded, of purest white, except a small purplish crimson throat, and of great substance, and remarkable keeping qualities. It never shows any tinge of color in maturing, like Augusta does, and is the very best white of tainable.

Stokes' Sugar Sweet Muskmelon.

Would you like a Muskmelon, every one of which has that delicious, sweet flavor that every Melon lover thinks so much of? We have it here in the Stokes' New Sugar Sweet. I believe, without any exaggeration, it is the sweetest and most delicious-flavored Melon that has ever been offered to the trade. The vine is very strong and perfectly blight-proof, holding up green and strong until all the Melons are ripened. It is nicely netted, flesh thick and dark green, with tendency toward pinkish hue near the seed cavity; the seeds are very small and few. The Melon is slightly ohlong and very uniform in size, averaging about 6 ins. in diameter and 7 ins. in length. Its great uniformity makes it a great crate Melon for market, packing evenly, of exact size markings. I cannot recommend this Stokes' Sugar Sweet Muskmelon too highly, either for home use or for market.

Stokes' Sugar Sweet Muskmelon

Berks County Bottle Onion.

—In passing through the markets, at Reading, Berks Co., Pa., I noticed this curious-shaped Onion being offered for sale, and on inquiry I find that the good German people of this section would not buy any other Onion as long as they could get the Berks County Bottle Onion. In shape they are entirely unique, as will be seen from the illustration, many of them being just the shape and about the size of a sarsaparilla bottle. In color they are a light yellow, some having a tendency to a brownish outer skin; the skin is very thin, the flesh white and of very fine texture, delicious and delicate beyond compare and pronounced by connoisseurs the best white-fleshed Onion known. For family use it is unsurpassed, while for market it will be a winner wherever it becomes known, owing to its great beauty and novel shape attracting the eye. This Onion has been known in Berks county for years and is justly treasured there, as it will be in other sections when its merits are known. It is the most novel and distinct Onion yet introduced. It averages 7 in. in length.

Berks County Bottle Onion

Stokes' Floracraft Earliana Tomato.—The earliest Tomato on earth. This new Tomato, now offered for the first time, is the earliest Tomato in existence. It is fully a week ahead of the Sparks' Earliana and, notwithstanding this, the fruit is larger and more of it on the vine. The vine is vigorous and strong and resists blight; 45 to 50 fruit will fill an average five-eighths basket; 75 to 80 fruit will fill a bushel crate. In going over my field of Tomatoes, growing for seed, we frequently found crown clusters of 12 to 15 large, handsome, marketable fruit with handsome clusters also at the branches. It is sweet in flavor and not acid like many strains of Sparks' Earliana. In color it is a good glowing scarlet without core.

Novelties and Specialties Offered by the Griswold Seed Co., Lincoln, Nebraska

Corn-Saver Beet.—A big money maker! Keeps hogs healthy! Fattens hogs for one-tenth the price of corn. We, like other farmers, have been wondering how we could fatten our hogs without feeding them so much high priced Corn. We have been experimenting along this line in the way of feeding Alfalfa hay, Beets, and other things. We finally decided that Sugar Beets would make a better feed because sugar is always fattening. Last year we secured from Germany a new Sugar Beet that was extra rich in sugar, considering its size and other desirable qualities. We tried it out thoroughly, and it proved to be all that we could desire, and saved so much corn that we decided to name it Corn-Saver Beet. We began by feeding our hogs one-third Corn, one-third Alfalfa hay, and one-third of these new Corn-Saver Beets. We reduced the amount of Alfalfa hay and Corn from time to time until we were feeding an average of one small ear of Corn to each hog, a very little Alfalfa hay, and the balance Corn-Saver Beet. We let them have all they could eat. The hogs got rolling fat, healthy, and frisky. This experiment proves that we have struck something that will make the profit on hog raising several times greater than it has been heretofore. These Beets grow very large, about one-half out of the ground, and are thus easily dug. They are two or three times as large as the regular factory Sugar Beet, and much better for stock feeding. They make from twenty to forty tons per acre, according to the way they are taken care of.

New Shalla.—A non-saccharine Sorghum from India, where it is extensively cultivated under the name of "Shalla." It is more valuable than Kafir Corn for grain, as it yields considerably more seed, it being of stooling habit, producing all the way from three to six stalks from a single grain, and it is quite a drought resister. The heads grow similar to Broom Corn, forming large heads of round, plump, white seeds. It is an excellent feed for horses and cattle, and for chicken feed it is unexcelled. Can be popped the same as Pop-corn, being more crisp than Pop-corn. When ground it makes an excellent flour for pancakes. It is more of a grain crop than a forage crop. It will produce more seed than any of the Cane or Sorghum family and about double the amount of either Red or White Kafir Corn.

Novelties and Specialties Offered by Stumpp & Walter Co., New York

Brussels Sprouts, S. & W. Co.'s Favorite Long Island Grown.

—A very fine strain, the result of many years' careful selection; for color, hardiness and productiveness it cannot be equalled. An extra fine variety for either private or market garden trade. It has a thin smooth skin and fine flavor and we do not know of a variety that will give such general satisfaction.

Potato Merrill.—Enough cannot

be said about this wonderful Potato; of all the varieties tested in our trial grounds for the past two years, we have not had a Potato to give such yield of fine quality. It has a wonderful top growth, very large stalks and leaves and large clusters of blossoms. Tubers very white, well netted skin, which is Nature's mark of good quality; oblong in shape and grows very large. We had tubers of this grand Potato last year that were smooth and shapely which weighed three pounds. Two of these Potatoes would reach across the top of a sugar barrel, end to end. Last year the growers of this Potato raised 75 bushels of Potatoes from one bushel of seed. In our trials last Summer it proved one of the best Potatoes in appearance and yield, and for cooking quality we have never seen its equal.

Potato, Green Mountain, Jr. New White Seedling.—It is practically thoroughbred or pure bred.

It has all the parents' good qualities and in general appearance is the same, except it is a trifle whiter in color and the skin more netted. It grows round to oblong, somewhat flattened; eyes shallow. The sprouts in Spring are white and stubby and do not grow very long. Soon after the stalks appear above the surface they branch very much, the broad, dark green leaves lying close to and completely covering the ground, which will kill weeds and grass and have a tendency to hold moisture. It will make a vigorous, rapid growth, set a large number in the hill and mature to the best marketable size a few days earlier than its parents. Blossom is white, with yellow center stalks. Cooking quality excellent. The past season on our trial grounds it gave a yield at the rate of 640 bushels per acre.

New English Pea, Carter's "Quite Content."—A giant-podded main crop.

Awarded the first-class certificate of the Royal Horticultural Society, 1906. Pods longer than any other Pea in cultivation. This grand Pea, which has caused such a stir in the Horticultural world during the past season, is the outcome of a cross between Alderman and Edwin Beckett. In general character it resembles the former, but the pods are considerably larger than either parent. In our own trials it has amply demonstrated its wonderful superiority, and when exhibited it was pronounced by leading experts to be without doubt the finest Pea ever seen. It is exceedingly prolific, and the pods hang mostly in pairs. Height, 5 to 6 ft.

Zinnia, Giant Double - Flowering.

—Our stock of this very popular garden flower is very carefully selected only from the largest and most double-flowering varieties. Every brilliant color and shade known in Zinnias is represented.

Begonia Gracilis Prima Donna.

This splendid variety has been obtained by crossing the excellent white *B. semperflorens* Triumph with the beautiful dark red *B. gracilis* luminosa. Of very sturdy and even habit, the plants grow about 10 in. high and form a freely branching bush 10 to 12 in. across. Its characteristic feature con-

Brussels Sprouts, "Long Island"

sists in its uncommonly large flowers, which measure 1 in. by 1 1/4 in., and are of a limpid rose, shading to carmine toward the center, a color of exquisite beauty. Borne on strong, short stalks, the blossoms appear extremely early and make a very free and continuous display above the fresh green, slightly brown-tinted foliage. *Begonia gracilis* Prima Donna, which may be described as a perfected, ideal form of the favorite *B. gracilis*, is a superb plant for bedding and pot culture. This excellent novelty, which comes true from seed, will certainly soon become a general favorite.

Aster, S. & W. Co.'s Late Branching.—This excep-

tionally fine Aster is without a rival. It is as well known in Europe as in America, and although we placed it on the market only a few years ago, today every florist has a fine stock of the flowers in his window just before the Chrysanthemum comes in; and it is often mistaken for the Chrysanthemum, which it so much resembles. The flowers are of extraordinary size—much larger than other varieties—and stand erect on long, graceful stems, well above the foliage; flower stems 15 to 20 in. long. Grand for cutting. Plants extra large and of strong growth; one plant will cover a space two and a half feet square. By far the most satisfactory Aster grown.

Antirrhinum, Tall Carmine Rose.—Color a bright carmine with a golden yellow blotch on the lower lip, large flowered and profuse bloomer.

Antirrhinum, Tall Chamois.—Very handsome new color, quite distinct, a lovely apricot yellow with purplish red upper lip. Large flowered and profuse bloomer.

Zinnia, Giant Double Flowering

Seed Oats "Early New Market White."

—The Early New Market White Oats seem destined to be very generally sown. The berry is large and plump, the hull thin, and the kernels fully the size of grains of Wheat. Possessing remarkable vitality and health, practically every kernel will germinate. In earliness these Oats are fully two weeks ahead of many other varieties. The heads are long and well filled; weight, fifty pounds per measured bushel. The straw is stiff and grows as high as five feet. Last season this new sort produced most satisfactory yields (as high as ninety bushels per acre), and was extensively grown in the following States: Minnesota, North Dakota, South Dakota, Oregon, Montana, California, Idaho, Colorado, Kansas, Nebraska, Iowa, Mississippi, Missouri, Arkansas, Illinois, Wisconsin, Michigan, Ohio, Kentucky, South Carolina, North Carolina, Virginia and Pennsylvania.

A New Radish "White Tip Sparkler."

White tipped Radishes are justly popular by reason of their attractive appearance, but the varieties, already in existence are either too dull

in the ground color or lack a clearly defined white tip.

New Radish "Cooper's Sparkler."—A quite distinct variety now offered for the first time, fulfils every requirement in each respect, the color being a rich carmine scarlet with a very pronounced tip of the purest white. The roots even when fully developed, are solid, crisp and sweet, and remain fit for use as long as the coarser kinds. It is equally well adapted for forcing in frames or growing in the open ground, for, while the leaves are small, they are sufficiently large for bunching.

Novelties and Introductions of Jas. Vick's Sons, Rochester, N. Y.

New Aster Vick's Early Upright. Two Colors: White and Lavender Pink

Nearly every one who knows anything about Asters, and particularly the commercial growers, who make more or less of the "shining dollars" from the sale of Asters, knows that Rochester, N. Y., is the chief center of the development and cultivation of this extraordinary annual. Likewise, nearly everyone knows that the established house of James Vick's Sons are not only the leaders in the cultivation of Asters, but occupy the unique position of having introduced a larger number of varieties well and favorably known and catalogued by the leading seedsmen than any other concern in America. By their energy in advertising the possibility of the Aster they have done a large part toward making the Aster what it is today, the most widely known and largely cultivated annual for commercial cut flower purposes in the market. There has hardly been a year in the last decade that they have not introduced one or more new varieties, and it is quite a remarkable fact that they have so accurately judged the demand for new Asters that nearly every new variety they have sent out has instantly met with popular favor.

Therefore, it was to be expected that a house with this reputation of introducing high-grade Asters, should be successful again this year in bringing before the American public one or more novelties of great value. In keeping with this reputation they announce the introduction of an entirely new class of Asters which they have named, Vick's Early Upright. As yet there are only two colors; white and lavender pink. Without doubt commercial growers will be very glad to get this new class because of the many excellent characteristics it possesses.

The strongest point in its favor is the fact that it is an early variety with sufficient strength to yield long, strong stems, crowned with large, full double flowers, which are so much in demand in the wholesale markets early in the season. It is a well-known fact that there are very few varieties of early Asters which give any great degree of satisfaction to commercial growers, and therefore every florist will appreciate the value of a new class which will widen the range of salable flowers during the early part of the season.

Vick's Early Upright appears to have a very vigorous constitution and thus far all comparisons between Vick's Early Upright and Queen of the Market indicate that the former is much the sturdier and probably will do well in a good many places where Queen of the Market usually fails.

The plants bear numerous flower stems which are comparatively free from side shoots. To secure the best results, the central flower stem should be disbudded, thus throwing all of the strength into the side shoots. Under such treatment ninety per cent. of the blooms will be of salable size. The flowers themselves are large and full; petals are of medium length but of considerable substance. The crown of the flower is completely covered. The general appearance of the flower is much like Vick's Late Branching; round and full in the center, comparatively ball shaped.

For the past two years, while this variety has been tried out, the flowers have been sold in the wholesale market, particularly in Pittsburgh where they have brought top-notch prices. The two colors, pure white and lavender pink, go well together. It goes without saying that there is more of a demand for white Asters than any other color, but the lavender pink is a particularly pleasing color, the central portion of the flower being a delicate pink, almost white, while toward the outer edge it gradually shades towards a decidedly lavender pink. Every wholesale florist who has seen this variety speaks well of it, and if the owners were accustomed to sell cut flowers instead of seed, they could sell their entire crop for this coming Summer in advance.

Specimen flowers of Vick's Early Upright were shown by James Vick's Sons in their Aster display at the S. A. F. Convention at Niagara Falls in 1908, and at Cincinnati in 1909. There is no doubt but that there will be a big demand for this variety. Those florists who secure their seed this year will doubtless find a ready sale for all their stock.

New Aster Vick's Rose King

Another novelty offered by James Vick's Sons is a companion to the popular Vick's Violet King. So rapidly did Vick's Violet King spring into popular favor that although it has been on the market only six or seven years there are a very few catalog seedsmen who do not list this handsome, large, late flowering variety. As nearly every florist in the country is well acquainted with Vick's Violet King, no further description needs to be made for Vick's Rose King except to say that it is similar to Vick's Violet King in all respects but color.

Vick's Rose King is a rich, bright, glossy rose, entirely unlike so many dull shades of rose frequently seen in Aster markets in the last few years. It is just the color to sell well in every market. There are places where purple, lavender and various other shades are not held in very high esteem by the average flower buyer, but there is probably not another color in the whole range of Summer flowers of more pleasing shade than Vick's Rose King. It makes an ideal color to go with Vick's Violet King.

New Aster Vick's Rose King

Novelties Offered by W. Atlee Burpee & Co., Philadelphia.

(Concluded from page 351)

endeavor of this firm to be rated at top in this particular line has been rewarded with deserved success. Its many recent introductions have met with such popular approval that sales of all varieties are likely to clean up the available supply. The popularity of the Sweet Pea is universal and pages might be written on its many-sided charms. Its simplicity of culture and the full assurance of a mass of flowers if fairly attended to, makes it perhaps the most popular of the Summer flowers. "The more cut off the more come on," is as true with Sweet Pea flowers as it is that night follows day. Sweet Pea culture lends a fascination to the garden which no other flower imparts, and its popularity in America is in no small measure due to the publicity given these facts by the Burpee Company through their advertising in the magazines and daily papers. The colors, too numerous to mention, combined with the delicate fragrance, make it a flower as suitable for the sick room as for the banquet table, a fact readily realized by all, whether they have a garden or not.

the front rank of Spencer novelties, maintaining throughout the true Spencer form of flowers borne on long stiff stems.

Two other varieties, which with those before mentioned are conceded to form a quartette of productiveness and charm, are Senator Spencer and W. T. Hutchins; those fortunate in securing seed of these leaders can boast of having four of the best Sweet Peas of the Burpee production. King Edward Spencer, and many others of the gigantic Orchid-flowering Countess Spencer types, as well as the Eckford and Unwin varieties, are also handled by the firm in immense quantities.

A novelty of recent prominence which should appeal to florists is the new African Daisy, *Dimorphotheca aurantiaca*. It is easily raised from seed, grows freely and is a mass of golden orange flowers, similar to a Gerbera. As a bedding and border plant in the annual class it should meet with recognition. Its growth is about 15 in. high; plants are free from insect attacks, while flowers are produced early and plants in a sunny situation bloom throughout the Summer.

Seeds of all the annual flowering plants receive much attention from the Burpee Company, a full line of every variety being carried in stock, to enumerate which would be beyond the space limit at this writing. A select list of perennial flowering seeds, obtained from the hardy plant borders at Fordhook is growing from year to year, attesting to the fact of the increasing popularity of this branch of floriculture. Bulbs of every variety are also carried in stock so that wants of any description may be satisfied and filled from stock on hand, a fact which enables the firm to fill every order with despatch.

A. H. S.

Novelties and Specialties Offered by A. T. Boddington, New York

(Concluded from page 350)

Picotee.—A lovely new and distinct variety, Spencer form. Flowers white, beautifully edged carmine, large and well waved. In most cases flowers are borne four on a stem, well placed and of grand substance, free

from the coarseness in placing often seen in certain varieties of the Spencer type. Strong grower, and should be a good addition. Will be in great demand, both as an exhibition or garden variety.

Eschscholtzia Mikado.—H. A. This variety is the result of a cross between Mandarin and Carmine King, and is one of the most brilliant varieties in color ever introduced. The color is orange-crimson suffused with deep crimson. This will make an excellent companion for the other vari-colored Eschscholtzias now being introduced and will prove very valuable as a cut flower.

Eschscholtzia Diana.—H. A. This is another very fine variety of Eschscholtzia and a very dainty flower. The color is rosy white, while the petals are fluted in a novel manner, giving the flower quite a fantastic and attractive appearance.

Eschscholtzia Boddington's Double Orange.—H. A. This is a very valuable addition to this group of useful hardy annuals. The color is deep yellow suffused with crimson. The flowers are quite double and come very true from seed.

Verbena, Mammoth, Rose Queen.—H. A. The flowers, which are of a most brilliant rose, measure 1 to 1½ in. across. It is a strong grower and very free-flowering.

Lobelia Illumination (Cardinal Fulgens).—H. P. This variety is the result of a cross between Lobelia cardinalis and Lobelia cardinalis Queen Victoria. It grows about 2 ft. in height, producing very strong flower-stems with bronze foliage, similar to the variety Queen Victoria. Flowers intense scarlet, compact and forming a fiery, torch-like mass. Will, in time, supersede the ordinary types and be especially adapted for herbaceous borders, etc.

New Hybrid Gerberas

Barborton Daisies

When Gerbera Jamesoni, popularly known as the Barborton Daisy, was first introduced, just over twenty years ago, it was regarded solely as a desirable flowering plant for the greenhouse or warm border outside. These anticipations have been fully realized, and what is more, it has, in conjunction with other species, given rise to a delightful series of hybrids destined, no doubt, to become exceedingly popular.

The credit for these hybrids is due to Mr. Lynch of Cambridge, whose first hybrid was between Gerbera viridifolia, a species with small white flowers, and G. Jamesoni, the result being various shades of color from white to deep pink. Gerbera Sir Michael, a yellow form of G. Jamesoni, was sent direct from Natal by Mr. W. R. Adlam, one of the first crosses being between this yellow-flowered variety and G. Jamesoni itself, the result being the variety Brilliant.

Mr. Lynch continued his work until he was able, in 1904, to show a group of these plants whose flowers varied in color from pure white to deep scarlet, through various intermediate shades of buff, pink, yellow, orange and light scarlet.

This work once begun was continued on a much larger scale than is possible in a botanic garden by M. Adnet of Cap d'Antibes, France, who commenced with a few of Mr. Lynch's hybrids, and, by raising seedlings in a wholesale manner, his collection soon became a very extensive one. Veritable sheaves of cut flowers, all colors and shades being represented, were exhibited at the last Temple Show and admired by everyone. A particularly striking feature was the extreme vigor of the flower stems, far surpassing in stature anything I had ever met with in G. Jamesoni, while M. Adnet has, I believe, found that they are hardier than this species. In his favored clime M. Adnet obtains large quantities of seeds. A surprising feature about these seeds is the quickness with which they germinate, for some that I sowed and placed in an ordinary greenhouse were above ground in less than a week.

How to Grow the Barborton Daisies

Sown early in the Spring they will form neat little plants by the Autumn, and a few may show flowers the

New Hybrid Gerberas—Barborton Daisies

Catalogued by Many of the Leading Seedsmen

second season, but they are, at least in our climate, not at their best until the third year. These Gerberas may be grown in pots in a sunny, airy house, but they are decidedly superior when planted out in some loamy soil in a well-drained and warm border. In the Royal Gardens, Kew, they are planted in a narrow border on the sunny side of the Orchid house, and are objects of great beauty for a long time. At Cambridge, the Gerbera thrives at the foot of a wall protected during Winter by glass lights from rain and cold dews, while they get free ventilation.—H. P. in *The Garden*, Eng.

Burpee's New Earliest Catawba Corn

The success of the firm in winning the gold medal of the National Sweet Pea Society at the exhibition in the R. H. S. Hall, London, Eng., July 23, 1909, is well worthy emulation, as this was the first medal ever won by a grower outside of Great Britain; it was awarded for excellence of flowers staged, a condition which we, in this country, know to be the usual standard.

The Burpee Co.'s list of Sweet Peas is indeed large, but the best have been chosen and sent out as representing the cream of the hybridizer's or specialist's endeavors. The Spencer types for 1910 include two beautiful varieties, Miriam Beaver and Marie Corelli, which stand forth as a climax of present day production, illustrations of which are reproduced on this page. In the trial grounds, both at Fordhook and in England, these two varieties have been pronounced by Sweet Pea experts as being in

Novelties and Specialties Offered by Holmes Seed Co., Harrisburg, Pa.

Holmes' Green Prolific Pole Lima Bean.

Grows green, keeps green, and the only Lima Bean that is absolutely green when dried. The most productive Pole Lima Bean, as early as the Early Jersey, and unquestionably the most prolific of all Pole Limas. This Pole Lima was originated in Philadelphia over sixty years ago by Mr. Laferty, a market gardener, in the "Neck," that portion of South Philadelphia lying between the Delaware and Schuylkill rivers. Mr. Laferty was a gardener of renown who made a specialty of growing Lima Beans for family and hotel trade, and, being a very careful gardener, succeeded, in the course of his lifetime, in producing this Bean. Through careful selection of the Beans, close observation and long years of application, he finally became known in his locality as the best grower of Lima Beans in the "Neck." He cherished this Lima Bean and was careful to keep it to himself until he died, when his son, Godfrey, brought it to Mr. Wm. K. Harris, the noted florist in Philadelphia, about twenty years ago, and he has used his best endeavors to keep it as true as the original type. In our crop, which we grew this year, we find the Bean equals the Early Jersey or any other variety for earliness, and is by far more productive than any other Pole Lima we have ever seen grow. It is not like the Mastodon Lima, which retains only a portion of the green coloring in the dry Bean, but each and every bean of Holmes' Green Prolific Pole has that true, distinct, deep green color which insures the color when the beans are shelled for market. The large pods hang in clusters of from five to eight, which makes them easy to gather, each having five to six beans in a pod.

Early Sweet Corn, Holmes' Delicious.

—An entirely new and distinct variety—ready for market sixty-five days from date of planting. Without exception the most delicious early Sweet Corn. Fully equal to our Premo in size, twelve rows. Among the first in the market. Stalks grow from 5 to 6 ft. high, and in the entire crop of several acres this year we found the ears to be absolutely free from smut. It is a drought-proof Corn, which has not only been proven by our own test, but the testimonials given hear us out in this. The crop which we grew this year, although drought has done exceedingly well. We can truthfully say, in offering Holmes' Delicious Sweet Corn, that we do so knowing it will grow in public favor, the same as our many other novelties which we have introduced. The private gardener is always on the lookout for something superior to anything he has had before—the Holmes' Delicious meets this requirement. The market gardener is also always on the lookout for something

extremely early—this also meets his wants. The farmer, as well as the private and market gardener, is just as eager to secure a good article, and to him we truly say the Holmes' Delicious meets his requirements. It is one of the hardest of Corns that we know of, and can be planted at the same time as the Premo or Adams' Extra Early. Each stalk bears from two to three well developed ears. We particularly noticed this one fact, that each stalk had at least two ears that were marketable—not as the usual growth of Corn: that is, one small and one large ear, but both grew large and in many instances three well developed ears were on the stalk.

Novelties and Specialties Offered by Pape & Bergmann, Quedlinburg, Germany

A Pink Carnation-Petunia.—The firm of Pape & Bergmann of Quedlinburg, Germany, is offering among its novelties for 1910, new colors in the pink, so-called Carnation Petunia, introduced a few years ago, which has become so very popular abroad, and which was awarded a medal and a first-class certificate at an exposition in Paris, last year. The above firm has succeeded in growing other colors of this Petunia, for which they predict an equal popularity, such as white, pink, carmine, white with pink sheen, pink mottled with white, light red, etc. The flowers are small and not unlike a Carnation in shape; they have short stems, and are set thickly clustered close to the dark green foliage. As they appear in great profusion, and also are very lasting, this Petunia is especially to be recommended for garden decoration and for groups that are desired to be continuously in flower. Its habit being low, it may also be used for borders in sunny beds. A very large percentage of the flowers are double.

Salvia Patens Compacta Nana.

This is another novelty offered by the above firm, said to be an improvement on the popular Salvia patens. Its habit is compact and much more dwarf than that of the parent plant. The long trusses appear in great profusion and erect above the leaves. The flowers are as large as those of S. patens, and of the same magnificent dark blue, such as is found in hardly any other flower; Salvia nana

Pape & Bergmann's Carnation-Petunia

begins to bloom much earlier, about ten weeks after sowing.

Novelty Offered by S. M. Isbell & Co., Jackson, Mich.

Isbell's New Big-Dwarf Tomato.

—Ponderosa Fruits on Dwarf Champion vines. The greatest home garden Tomato ever introduced and a marvel for productiveness. This big fruited but dwarf or erect growing variety is one of the most important advances made in recent years in the line of varieties especially adapted to home gardens. The original plant was discovered by us in a large field of Ponderosa. Its vine would indicate a cross with Dwarf Champion, while the fruit is surprisingly similar to Ponderosa, although smoother. Those who have attempted in the past to grow Ponderosa, with its sprawling habit of vine, may now have the same exquisite quality of fruit on strong, erect vines requiring about one-quarter the space of the old sort, and in addition the crop will be borne up from the ground, thus insuring clean, sound, fine flavored specimens. The foliage is coarse, heavy and of a healthy dark green color. The main stem or stalk grows about 20 to 24 inches high and is very stiffly erect—so much so that the immense clusters of large fruits are well supported. The fruits themselves are fully equal in size to those of Ponderosa, being by far the largest fruited dwarf growing sort in cultivation. The color is same as Ponderosa, a rich crimson tinged with purple, making it surprisingly attractive when exposed for sale. The inside "make-up" of the fruit is one of its crowning merits—extremely few seeds and these near the outer walls; texture of the flesh as solid as a mellow apple; color of a rich crimson. We cannot imagine how it can possibly be improved upon in these respects. The flavor is unequalled,

being entirely free from that metallic acid taste which is characteristic of some otherwise good sorts. Inasmuch as both its parents are noted for their most exquisite quality, the New Big-Dwarf is a top notcher in this respect.

Geranium Novelties Offered by R. Vincent, Jr. & Sons Co., White Marsh, Md.

Among the Extensive List Offered by this Firm are Noticed the Following

Bruant's 1909 Novelties

The Zonal Pelargoniums or Geraniums originating at Bruant's establishment are universally known, have been exhibited at thousands of expositions, and have brought to the exhibitor very high praise and rewards. This year's Novelties have been selected with the greatest care and will be found to contain the choicest assortment ever placed in commerce. We would call especial attention to their sterling qualities, healthy constitution and easy cultivation.

Bohemos.—Plant robust; compact habit; free flowering; fine trusses; semi-double flowers; elegant form; rich violet with velvety and fiery spots mixed. Double.

Interne Bazy.—Plant robust; compact habit; good trusses; remarkable shade of anilin violet; very shiny; the upper petals have a darker border. Single.

Rosaflera.—Compact habit; grand upright trusses; very good foliage; flowers semi-double; petals elegantly curled; fine rose, slightly shaded salmon; fresh and pretty color; good and free bloomer. Fine for bedding. Double.

Fraisidis.—Plant of good habit, flowering abundantly; semi-double; very open; brilliant rose strawberry mixed and maculated clear violet. Distinct variety. Double.

Madame Dux.—Strong trusses; large, round flowers; semi-double; elegant form; delicious color of apricot salmon, center dark, shading to the margin like white rose. Variety of good merit; prettiest one of the sex in this color; constant bloomer. Good for grouping in beds in the open air. Double.

Secvola.—Large umbels; long flower-stalks; semi-double flowers; clear rose, powdered rose carmine. Beautiful variety. Double.

Claironnant.—Plant of specially good habit, flowering abundantly; a little double; very open; grand umbels, being detached from the foliage; large copper-red flowers. Double.

Jean Bologne.—Plant floriferous; compact habit; large, round flowers; dark red, grand white center. Beautiful effect. Single Cyclops.

Pierre Vierge.—Free flowering; plant low; easy grower; thick foliage; flowers round, center gold, with a white border, white eye; fresh coloring. Good variety. Heavy wooded. Large flower.

Verger Fleuri.—Good habit; robust and good; foliage very large; pure white flowers; very lasting. Best of the white varieties. Heavy wooded. Large flowers.

Houllier Lenglet.—Plant robust; good foliage; umbels enormous; large flowers; vermilion red; very

France, and are convinced that they will be found as satisfactory as those of his former introduction we have sent out. Some of the best of our standard varieties have originated under the care of Mr. Lemoine. The collection comprises nine single and six double varieties of which we mention here:

Emile Hinzelin.—Enormous upright trusses; flowers fiery red, shaded black to the center. Single.

Georges Beaume.—Round, perfect flowers; light rose color, with white veins on the upper petals. Single.

Ernest Hebert.—Very woody; enormous flowers; semi-double; rose white with a salmon veined center. Double.

STANDARD VARIETIES

M. Anatole Roselaur. (Bruant 1900.)—A most beautiful shade of deep rose pink, rivaling in beauty and freshness the color of the Paul Neyron Rose, a color that has been more admired than that of any Geranium we have on our place, and which we are confident will soon become the standard pink, superseding all others. The flowers are large, semi-double, showing a distinct white center; enormous trusses, borne on long stems well above the clean, extremely handsome foliage. Its habit of growth it is most pleasing; dwarf, short jointed and vigorous, producing flowers at almost every joint. We unhesitatingly recommend it, as there is no question but that it will give satisfaction in every case, either as a pot plant or bedder. It is a standard double variety.

Pentstemon Myddleton Gem

In recent years the Pentstemon has been very much improved, both in habit and color of the flowers, and now is a highly valued perennial for producing a mass of bloom during the Summer months, blooming the first season from seed. The variety Myddleton Gem is the latest addition to the compact, free branching type. It was shown before the floral committee of the Royal Horticultural Society, England, last September, by R. Wallace & Co., Kilnfield Gardens, Colchester, England, and received an award of merit. Our illustration is taken from The Garden.

Carnation Dahlia "Corona"

ORIGINATED BY W. W. WILMORE, DENVER, COL.

Corona. 1910. (The Carnation Dahlia.) Its origination with Mr. Wilmore was from seeds saved from Cactus Dahlia Mrs. Peart. A miniature decorative form, fully double and of purest white. Its wonderful freedom of bloom, pure color and chaste form places it at once at the head of the list as a florist's flower. At a little distance it would be pronounced a Carnation, which it resembles both in size and form. This graceful decorative type will undoubtedly supersede the rounded formal white Pompons. Last Spring I sent some stock of this variety to an Eastern specialist (Nathan A. Miller) for trial, and he makes this report: "The White Pompon, Corona, sent for trial was superior to anything in its class for design work, and later in the season attracted much attention as a buttonhole flower." Stock very limited.

Pentstemon Myddleton Gem

bright. Good for bedding, center or border; also for decoration. Has very large, semi-double flowers.

Alphonse Dachy.—New variety, very much like Dagata; good and strong grower; large umbels, and very open; semi-double; largest of all new varieties. The color is a very dark rose, with one large white spot on each of the upper petals. Has very large, semi-double flowers.

Rozain-Boucharlat's 1909 Novelties

Those of our customers who have had the Rozain-Boucharlat set of Novelties the past few years will appreciate the fact that we are able to offer a set this season which will be found up to the high standard of perfection for which this type is noted. The set comprises 13 single and 10 double varieties. Among the best are:

Lieutenant Vary.—Grand flowers; large purplish fiery reflex, white eye; plant dwarf; very floriferous. Single.

Victorien Sardon.—Flowers semi-double; clear transparent crimson, shaded fuchsia purple, center aurora. Double.

Jules Cambon.—Double flowers; dark currant red, shaded violet. Double.

Louise Rozain.—Grand round trusses; good shape; magnificent white rose color, halo over weever. Extra novelty. Single.

C. Bessonnet.—Beautiful semi-double flowers, perfect form, with a mauve center, petals bordered mauve carmine. Double.

Vigie.—Very grand flowers with large petals; clear cochineal red, center white, surrounded by purple. Double.

Stephen Pichon.—Velvety crimson purple, shading to scarlet carmine, white eye; feathered fire. Single.

Camille Dejoud.—Semi-double; fuchsia red, center nasturtium color. Double.

V. Lemoine's 1909 Novelties

We are pleased to offer to our customers a grand set of Novelties introduced by Mr. V. Lemoine, Nancy,

Corona. The Carnation Dahlia

Gladiolus Introductions of Arthur Cowee, Berlin, N. Y.

While the six varieties of Gladioli to which attention is called—Peace, Faust, Blue Jay, Dawn, La Luna and Victory—may not be strictly classed as novelties, this being their second year, still the exceptional characteristics which render them invaluable to the critical grower searching for highest quality possible, places them in a class where too much cannot be said regarding them.

Peace (Groff's) often attains a height of 6 ft., bearing large, pure white flowers of good form correctly placed on strong, straight spike; the inferior petals are slightly marked with a pale Lilac feathering. Peace is a late bloomer, making it most desirable for florists requiring light colors.

Blue Jay (Groff's, not Baron Hulot) is, without doubt, the best of the blue varieties yet produced. As the name indicates the color and shading are in harmony with the beautiful bird after which it is named.

Dawn (Groff's).—No more suitable name could be applied to a flower than this to the variety which bears it. It throws a tall, straight spike, bearing large flowers of a delicate salmon, shading to white, when bloomed inside, giving a most pleasing effect. The small claret stain on the inferior petals adds much to its beauty.

La Luna (Groff's) is most appropriately named from the fact that the large, heavy buds open as a pale yellow, which passes to a pleasing white when the flowers are fully expanded, being relieved by a small brown marking in the throat. The petals are exceptionally strong and heavy, but unlike many heavy petaled varieties, this one blooms freely in water.

Faust.—A deep, velvety crimson with a lighter shading on the two lower petals, which are suffused with white. An early to medium season variety, and one which would attract particular attention in any garden.

Victory.—A medium sized flower of a delicate sulphur yellow, with lower petals shaded a deeper yellow. It produces a tall, straight spike of exceptional vigor, which places it in the van of all yellow varieties as a sure crop.

Mr. Cowee has a most promising lot of new seedlings, in both light and blue shades, the classification of which was begun last year. Types and shadings which have never before been introduced show in great numbers, a few of which he hopes to list in 1911, and which will undoubtedly be exhibited during the 1910 blooming season.

Aster Hybridus Loreley

Moeller's claim this as the largest pure white, bushy Fall Aster. This novelty was discovered two years ago among the seedlings in the gardens of the nurseryman Heinrich Junge of Hameln, Germany, and the plants

Peace

Blue Jay

Dawn

under observation since then have justified the discoverer's predictions as to its future. The handsome flower is large and compact in shape, and grows clustered loosely in panicles. The petals are pure white, while the disc is light yellow. The plant is a good grower, attaining a height of 40 in. in the heavy clayey soil, unmanured, of Mr. Junge's gardens, and is in flower during the entire month of October. Loreley may be used for landscape gardening, and as a pot plant; but it is especially valuable as a cut flower. As such it was greatly admired for its size and purity of color at a meeting of the

Provincial Hort. Society, held in Hanover, Germany, last October. Loreley is, however, not as well adapted for bedding purposes as its habit is somewhat straggly.

Carnation Lady Algy

This splendid new introduction was exhibited by Mr. A. H. Wingett at the meeting of the Lenox Hort. Society, Jan. 15, 1910, and was unanimously awarded a first-class certificate. This is one of the most promising new varieties in sight; in color it is a pure salmon pink, not the washed-out color that is sometimes called salmon, but the true color of the fresh fish. It has been the good fortune of the writer to see it growing this Winter and, among a house containing the best varieties, splendidly grown, Lady Algy attracted instant attention. It is a sport from Beacon, and when I say it has all the good qualities of its parent growers will know that there is not much amiss with it, in fact it almost seems to outdo Beacon in vigor and floriferousness. I do not know of anything to equal it especially in attractiveness of color, either by natural or artificial light. Mr. Wingett believes it has a future and is handling it on the most approved methods, propagating nothing but the best of cuttings.—EDWIN JENKINS.

New Rose Deutschland

This latea hybrid is a cross of Schneekoeniginn and Soleil d'Or, which has inherited the qualities of both parents to a remarkable degree. The bud is at first white, changing into light yellow and then orange as the flower unfolds. When fully open the edges of the petals are tinged with light pink and the Rose at this stage is among the loveliest of its kind. The plant is a good grower; at first it is very thorny, but later on the thorns disappear almost completely. The stems of the young bush are grass green, turning later into a greyish green, and they appear then very unlike Rose stems. The flowers come out singly or in clusters of threes. Deutschland makes a strong bid for popularity both for grouping and as an individual Rose bush and also grown as a standard. It will be put on the market in the Fall of 1910 by the rosarians Hermann Kiese & Co. of Viesebach, Germany.

The same growers have another novelty, which, however, is not promised until 1911. This is the Hybrid Tea Grossherzogin von Weimar (Grand Duchess of Weimar), a cross of Schneekoeniginn and Kaiserin Auguste Viktoria. It is erect in habit, has few but very sharp thorns, and the upper part of the stems is quite smooth. The leaves are somewhat larger than those of the Kaiserin and more round. The flower is very large and snowwhite on a yellow ground. It opens slowly but lasts a very long time, even in great heat, although it is not so very double. It generally grows singly; and no stem has yet been found bearing more than three flowers.—Moeller's.

La Luna

Faust

Victory

Chrysanthemum Novelties Offered by Chas. H. Totty, Madison, N. J.

Since the advent of the Chrysanthemum the trade should feel indebted to this gentleman for his good work in bringing to the front many of our best commercial and prize winning varieties. His appointment, recently announced, as the American agent of the Wells-Pockett combination, will surely result in good, and all may look forward to some interesting novelties in the near future. Much has been said in these columns regarding the output of the establishment at Madison, N. J., and since the taking over of the greenhouses known as Florham Farms, which are near by the older place, greater developments are looked for in many lines.

Those who visited the Farms last Fall, during the time when Chrysanthemums were in full flower, saw flowers which it is hard to forget, especially when so many of the blooms proved to be prize winners. Now that the season is here when all who intend growing flowers for exhibition or commercial use, are casting about to find out what and where to secure the stock desired, a few notes on the lines handled by Mr. Totty may not come amiss.

Mrs. David Syme is a grand white, producing an immense bloom on a perfect stem from bud taken about Aug. 15. This variety won a gold medal in Australia, and was certificated in England, and as seen in Madison last Fall, would have scored high had there been enough stock on hand to warrant its being shown.

Mrs. W. A. Read, an intense fiery scarlet crimson, grows rather above the average height, and will surely make its mark as an exhibition variety in the crimson classes.

Chrysanthemum Mrs. Wincott

Mrs. A. Stevens and W. Hotston reproduced on this page are two widely known Wells varieties of 1909 introduction.

The popularity of the Chrysanthemum is not confined to the large flowering types, as the Pompons and single flowered varieties have entered largely into satisfying the public taste. The past five years has seen the demand for these grow unabated, and producers have vied with each other to secure the best, until today a long list awaits the prospective purchaser, to select from which a suitable number is no small task. Those grown on the Totty establishments, include Yellow Garza, a seedling identical with Garza in every way except color, and which was so popular at all the Eastern flower shows last Fall; Autumn, Peter Pan, Merstham Jewel, Jessie Curtis, Gertrude, Golden Star, Ladysmith, Gretchen, Pretoria, White Garza, Robby Burns and a host of others to mention the attributes of which would require much space. Many of these varieties bloom early so that, planted outdoors in the North, flowers generally mature before frost, while for pot plants, in bloom from September on, nothing better for general store trade or decorative work could be had. Many growers secure much satisfaction from growing on these single flowering sorts from seed, many plants of which bloom from July until cut down by frost.

The seed is saved and sealed in packets by W. Wells & Co., Merstham, Surrey, Eng., and sent to Chas. Totty for distribution, and the demand for the packets grows steadily. Sown early in March, inside, pricked off when of size, they make plants large enough to be set out early

in May, 18 in. apart where, with ordinary care, they prove a paying investment.

Grafted Roses of all the well known varieties, in 2½- and 3-in. pots, is a line recently taken up on Florham Farms, and from the success already attained, larger quantities will be secured another year.

A large quantity of seedlings of *Amaryllis Hippeastrum* were being flowered, nearly all having four immense flowers to the spike. Dormant bulbs of these are on hand from which best results only are looked for, as they are the result of seedlings saved from hand fertilized flowers of the finest strain of Veitch's hybrids.

A novelty of sterling merit is *Alternanthera Jewel*, indispensable for bedding where foliage plants are wanted. It is brilliant in color, grows freely and of good habit, compact and uniform.

Carnations also receive an immense impetus on this place, the varieties handled being Sangamo, Mary Tolman, Conquest, Pink Delight, May Day, Georgia, O. P. Bassett, Beacon, the Enchantress trio, Winona, White Perfection and all other standard varieties which have proved good sources of revenue to the trade.

Chrysanthemum W. Hotston

Wells' prize winning Pentstemons, seeds of which are sent out in trade packets, prove more popular every year. A long list of Spring plants is also carried on the place, including Geraniums, Heliotrope, Lantanas, Moonvines, variegated Poinsettias, Ferns for ferneries, Sweet Peas, Dahlias, etc., all of which help to make the establishment complete and one where visitors always find a royal welcome.

A. H. S.

Chrysanthemum Mrs. A. Stevens

Mrs. R. Luxford, Indian red, with a golden reverse, dwarf grower, ranks easily above the existing early commercial reds, and buds taken in August produce fine cut blooms which, when used in connection with Autumn foliage, produces an effect hard to duplicate.

Among the special Wells-Pockett set for 1910 are Howard Gould, inside of petals bright golden chestnut, reverse side pure deep gold, presenting a perfect flower. Others are: Miss Alice Finch, purple crimson, perfect habit, foliage right up to the flower, from crown bud taken on Aug. 20, gave elegant results; Rose Ellis, an improved Lady Hopetoun; Miss Edith King, bright canary yellow; Kara Dow, chestnut with bronze reverse; W. Wood Mason, describing which, Mr. Pockett said "My best crimson," is a variety having a flower much larger than Pockett's Crimson; Alice Lemon, light soft pink, flower very large and beautiful.

Other introductions include Wells' Late Pink, a variety already well known and profitable alike to exhibition and commercial growers, who will find it one that can be absolutely depended upon. Miss Muriel Smith, W. Mease, Yellow Ivory, a yellow sport of the tried and true commercial variety of the same name, will prove very popular when better known. Yellow October Frost, a very early variety, identical with the parent in every way. Mrs. A. R. Peacock, a "Beatrice May" seedling, having the same shape and style flower, usually furnishes

Partial View of a House of Chrysanthemums—Varieties on Trial

Chrysanthemum Novelties for 1910 Offered by Elmer D. Smith & Co., Adrian, Mich.

Chrysanthemum Oroba

COMMERCIAL VARIETIES

Donatello.—While this variety is not a counterpart of Monrovia, it is in many respects an improvement. The color is bright yellow, form slightly incurving.

Adonis

Donatello

Ranee

Arlee

Itaska

Naomah

with good stem and foliage and excellent substance. It is especially adapted for those who bench their plants late, as it produces double flowers from late buds. $3\frac{1}{2}$ ft., fully matured Oct. 20. Best bud Aug. 20. C. S. A. certificate.

Oroba.—A large early white after the style of Beatrice May, being of the easiest culture, with fine stem and foliage. It may not excel Beatrice May in size, but its other splendid characteristics are so much superior that it will soon gain ascendancy with the commercial grower. 3 ft., ready Oct. 20. Best bud Aug. 15.

Tonkawa.—Deep golden yellow Japanese reflexed, with bronze shadings. The foliage is produced very close to the bloom, and the stem is the very best. Those requiring a midseason golden bronze will not be disap-

pointed. 4 ft. Best bud Sept. 1; ready Oct. 25. C. S. A. certificate.

EXHIBITION VARIETIES

Naomah.—Large Japanese incurved, a seedling from Merza, more conical in form than its parent. This variety was not judged by C. S. A. committee, but we have decided to send it out on its merits as a worthy addition to the exhibition section. If the stem were a little more rigid this would be an ideal commercial sort, as it possesses every other qualification and may prove very acceptable to those who plant early and give generous treatment. Pure white. $4\frac{1}{2}$ ft.; ready Nov. 1. Bud Aug. 25.

Ranee.—A large ball-shaped Japanese, belonging to the exhibition section. The early buds come pure white and the later ones are shaded pink. The petals are toothed at the extremities, and are rather irregular in their arrangement. Bud Aug. 25. $3\frac{1}{2}$ ft.; heavy stem and foliage. C. S. A. certificate.

Adonis.—A light pink of a slightly deeper shade than Gloria. The narrow petals reflex and interlace, forming an artistic bloom of the largest size, in which the depth exceeds the diameter. 5 ft. Best bud Aug. 25. C. S. A. certificate.

SINGLE VARIETIES

Arlee.—A rich golden amber of dwarf, sturdy growth, excellent either as a pot plant or for cutting. Is a true single of the large flowering section, producing large sprays which are borne erect. Entirely distinct and of exceptional merit. C. S. A. certificate.

Itaska.—Properly defined this variety is a semi-double incurved, but being so near single we have included it in this section. It is a seedling from A. J. Balfour, but is a few shades lighter. The incurving petals give the flowers the appearance of Pond Lilies, and being a most pleasing shade of pink are very useful for decorative work.

A NEW POMPON

Clorinda.—Semi-dwarf, producing erect sprays of an even shade of bronze. C. S. A. certificate.

Novelties and Specialties Offered by Sluis & Groot, Enkhuisen, Holland

Dwarf Bean "Alpha."—Long-podded, white seeded; very earliest; stringless. One of the very best introductions of the previous season. The shape of the pods and beans is nearly the same as "Best of All," white seeded, but the pods are longer and entirely stringless.

English Bean "Three-Fold White."—White flowered, white cooking and white eyed. This is an excellent novelty, being preferred to other sorts in that the eyes of the young beans as a vegetable do not lose their fresh appearance for a long time, whereas other sorts soon become somewhat dark-eyed and do not find such a ready sale. For this reason this new variety is quite a favorite among the Dutch vegetable growers and will, no doubt, like the older but larger "Large Thick White Eyed" (also offered by us), soon become one of the leading varieties for canning purposes.

Cineraria Dwarf Improved "Stella Hybrids."—Magnificent new hybrids of very dwarfish habit. For several years we have paid careful attention to the cultivation of our Cinerarias and have succeeded in getting a very large flowering strain which we can strongly recommend. Not only the large number of colors in our mixture but also the manifold star-shaped varieties, enables us to compete favorably with all existing Cinerarias.

White Cabbage "Enkhuisen's Glory."—Large, early, white; solid. Among many varieties of white Cabbage none combine the two desirable qualities,

earliness and largeness, held by this variety. We recommend it as a really early sort (coming in as early as the Early Flat Dutch), but, at the same time,

Cabbage Enkhuisen's Glory

making fine, large, ball shaped heads, particularly suitable for market purposes.

Cabbages "Holland Export."—Very dark red, half-early Autumn, and intermediate Winter. Above two local sorts are the most valuable for export. The early one is for the first Autumn shipments, and the latter for the Winter or to be kept through Winter until early Spring.

Scorzoneria, "Sluis & Groot's Improved Giant Annual."—An excellent sort which, when sown in the Spring, produces fine large, black, smooth roots in Autumn, without running to seed quickly as other sorts usually do.

Cyclamen "Amsterdam Giant."—Splendid mixture. This variety of Giant Cyclamen, which was offered last year for the first time for export, has been grown a number of years for the market in our country. Although it does not produce so abundantly as the old Cyclamen giganteum, the flowers of these improved varieties are much larger and, in some cases, range in diameter from $3\frac{1}{2}$ to 4 in. The plants have, moreover, a vigorous growth and find a ready sale.

Lobbianum "Ivy-Leaved Prinzessin Juliana."—The foliage of this variety is intensely dark leaved and of the typical Ivy leaf shape. The magnificent large, lacinated gold orange flowers, with sharply marked velvety red brown spot, are extremely effective upon the fine dark foliage. It is quite constant from seed.

Lobbianum "Ivy-Leaved Emma Alida."—Same as above, with dark Ivy foliage and golden yellow and orange deep scarlet lacinated flowers. Extremely lively color.

Nasturtium Tom Thumb "Spencer David Burpee."—One of this year's novelties which we can strongly recommend. Its very peculiar, wavy, emerald green foliage is different from any known variety (something like the flowers of Germania Pansies). The plants are very compact, and the fine, velvety purple scarlet flowers, borne on long stems, create an effective appearance in combination with its magnificent foliage. Most appropriate for borders. From seed comes fully true.

JOHN COOK'S NEW ROSE RADIANCE

New Seedling Rose Radiance

New Seedling Rose Radiance

ORIGINATED BY JOHN COOK, BALTIMORE, MD.

New Rose Radiance is a seedling from Cardinal and an unnamed seedling. In color it is a brilliant rosy carmine with opaline tints in the open flower; in a class by itself. The form is fine, large, with cupped petals, bud long, brilliant, radiant, with extra long stems, a constant bloomer, fragrant, foliage abundant and of splendid substance. A very strong and robust grower, producing flowers on stems 6 ft. and 7 ft. long. There is no Rose on the market today that can compare with Radiance for vigorous growth, handsome stem and foliage, and the color of its flowers. We have grown this Rose for eight years in a regular Rose temperature, day and night.

Dahlia Ruth Forbes

Originated by Joseph C. Forbes of New Bedford, now a member of the firm of William F. Turner & Co., which purchased the entire stock.

Disseminator's description is as follows: A beautiful clear pink without shading, the nearest approach to A. D. Livoni in color yet raised. A strong vigorous grower, producing its mammoth flowers in great abundance. For garden culture it occupies a prominent place, and for table decorations, especially under an artificial light, it has no equal.

This Dahlia has been awarded a first-class Certificate of Merit by the Mass. Hort. Society, being the first American seedling to receive this honor.

Dahlia Ruth Forbes

New Orchid Laelia Anceps Vars.

BY LAGER & HURRELL, Summit, N. J.

There are very few really new Orchids. We have here, however, a type of *Laelia anceps* that is new. We referred to these plants in your last year's Novelty issue but, at that time, we had not flowered any. This year several have bloomed and they have entirely fulfilled our expectations. The habit of the plants is the same as the common *Laelia anceps*; the flowers, however, are superb in their varieties, some having pure white sepals and petals, with rosy pink lips; others are white delicately suffused with a tinge of pink with rose pink lips; while others are entirely white. The illustration photo here given shows the fine form of a variety which is beautiful beyond description, having sepals and petals white with a most delicate suffusion of rose, the lower part of the lip and side lobes is of a pale rose; tube dull yellow with greenish veins. The pure white forms or albas are superior in every way to the old type, the flowers being larger and finer.

We wish it understood, however, that none of the above belong to the L. A. Sanderiana or Stella section, but are variations from the old common *Laelia anceps*, at least the habit of the plants is identical.

Carnation Niagara

This new Carnation, raised by the E. G. Hill Co., Richmond, Ind., is a seedling resulting from a cross with The Belle and an unknown variety. The flowers are pure white, and 3 in. to 3½ in. in size. It is a free grower, strong and healthy.

Carnation Niagara

Carnation "Canary Bird"

The following information concerning the new Carnation Canary Bird is furnished us by its originator, Henry Schrader of Saratoga Springs, N. Y.:

Canary Bird is absolutely the best yellow Carnation we have ever grown or have ever seen grown. There is, to our knowledge, none that can compare with it in constitution, stem, size, color or keeping qualities of the flower. It has for its parentage a pink sport of Mrs. Patten, and a pink seedling, in which there was Lawson blood, producing a stronger constitution than either Lawson or Patten.

This variety gives fine, strong, healthy cuttings, very easy to root, in fact we are rooting ninety-eight out of a hundred. Planted out in the field it is one of our best growers producing, by the middle of August, plants having from twenty to twenty-six flowering shoots. It is one of the first to recover from lifting, and one of the first to bloom in the Fall, with a fairly long stem which, later in the season, increases to twenty-four inches.

The color of the flower, described by its name, is a very bright canary yellow overlaid with just enough carmine streaks to set off its color well and enhance its beauty. Its color is just the right shade to lighten up any dark spot in store or house, and harmonizes beautifully in bouquets with Enchantress, Harlowarden, Patten, or almost any shade or sort of Carnation.

Its size runs from three to three and one-half inches. It is practically a non-burster, full and round in form, and the best producer and money maker we have ever had in any yellow Carnation.

Potato Seed Balls

Hybridized Potato Seed

Growing new, distinct sorts of Potatoes from seed-ball seed is, in many sections, proving both interesting and fascinating to amateur growers. A. T. Cook, the seedsman of Hyde Park, N. Y., is making a specialty of this seed, and the reports he received from several of his customers last year certainly show the immense satisfaction given.

Vase of 50 Blooms of Carnation Sangamo

From Chicago Carnation Co., Joliet, Ill., Disseminators

Carnation Mrs. Walter W. Coles

This is described by the originator, W. W. Coles of Kokomo, Ind., as follows: A bright scarlet crimson; good stiff wiry stem. Average flower over 3 in. in diameter. Calyx absolutely perfect. The only variety on our place that never splits, and the most wonderful free continuous bloomer. It was awarded a certificate of merit, and an award in the class for Crimsons, at the Pittsburgh convention of the American Carnation Society, Jan. 26, 1910.

Readers are requested to write us on any subject bearing on trade conditions. If the subject interests them it will, in all probability, interest many others.

Carnation Sangamo

Carnation Sangamo was originated by A. G. Brown, Springfield, Ill., and is being disseminated by him jointly with the Chicago Carnation Co., Joliet, Ill. In color, the flower is a brilliant, glistening pink, brighter than Winona, the difference being due to a tinge of salmon. In size it runs three inches and over. The petals are well arranged and all flowers are excellent in symmetry. The stems are strong, long, and stiff. The calyx is a non-burster. It is the result of a cross between Mrs. Nelson and Enchantress, and its habit and vigor is very similar to that of its Enchantress parent. It is a very free bloomer, throwing plenty of cuttings and breaking very close to the soil. It comes into flower very early; in fact extra good flowers with 12 to 14-in. stems are cut Sept. 1. It blooms continuously until July 1.

Dennison's Specially Designed Tags for Florists

Flowers are a luxury, not a necessity, a refinement of life rather than a primeval taste. They go, therefore,

usually into homes where discrimination prevails and where eyes have been trained to artistic ideals. Such

people are the first to detect inconsistencies, and they term "inconsistent" a small detail which many a florist entirely ignores. For instance, most florists are particular as to boxes and their linings. How many think of the address tag? Yet from the printed tag is often derived the only impression your name conveys to somebody. He may never have a chance to visit your store; yet he will imagine how it looks from your tag. The Dennison Mfg. Co., in their stores in New York, Philadelphia, Chicago and St. Louis, make a specialty of fine tags for florists. They are really beautiful, types of the highest art in tag workmanship. The stock is clear white and very fine. On it is printed in colors the jeweler's monogram or coat-of-arms, an embossed flower or, perhaps, simply his business card, but all done in such perfect taste that the tag is consistent with the goods it tags, attracts attention at once to the florist whose name it bears and, being seen again and again, accrues value as a trademark, always leaving its subtle influence wherever seen. It is attention to small inconsistencies that makes or mars a man or a business. This is one which many a florist would do well to correct.

Among the Growers

A. N. Pierson, Inc., Cromwell, Conn.

Seldom has it been the writer's pleasure to visit a more complete plant and cut flower establishment than that of A. N. Pierson, Inc., at Cromwell, Conn. Although not as near to the great flower markets as might be wished, its products are known throughout the East for their excellence of quality, and the shipping facilities available are such as to allow of the shipment of cut flowers to several far Western cities. The different markets are closely watched and the best and most profitable outlets for stock quickly taken advantage of. When one considers the size of the weekly payroll necessary for 215 regular men employed, some idea as to the necessity of constant vigilance in all departments can be formed. Several of these men have been with the firm over 25 years, many more 20 years, it being the one aim to so use the employees that labor is not drudgery but a pleasure, a fact clearly demonstrated while in conversation with some of the older employees. Anything likely to promote the well-being of this army of men is fully concurred in by the man higher up, and their bowling matches and duck pin tournaments between the several departments are enjoyed as much by Wallace R. Pierson as the men themselves. While it is understood that no formalities are necessary in order to address their employers, there is a fine quality of respect paid to them by the men in recognition of the fact that Cromwell really owes its growth and development more to this one establishment than any other local interest.

The wise policy of creating a corporation, giving the heads of departments and others an opportunity to become stockholders, has proved of vast benefit to all concerned, so that when one sees the firm's motto, "Standard varieties for commercial purposes," it is understood that the entire force is interested to produce the best obtainable, realizing that in these days of keen competition the best is none too good. The company also makes itself popular among the trade by refusing to sell anything not produced on the place; only by the express wish of a purchaser is stock procured elsewhere, full notice of which must be given before booking the order.

The most interesting feature of the establishment to the visitor is the grafting of Roses. No establishment in the East is in a better position to complete an order for any quantity of either grafted or own root stock. The advantages of grafted stock were clearly shown by W. R. Pierson to be far in advance over that of own root stock, especially during the first blooming period, when the first named produces two crops while the latter is making growth; and during the season the advantage is always in favor of grafted Roses, as the stock is more vigorous and easily handled, proving less subject to mildew and black rot. The two Killarneys, Richmond and My Maryland Roses are grown very extensively. The doom of the Bride and Bridesmaid varieties is sounded, and this year will see the end of them, except where grown for purposes of stock. The one great advantage of My Maryland is that it gives flowers at times of the year when other varieties are off crop, thus enabling the houses to contribute some income, as the help must be paid the same, week in and week out. The company will endeavor to ship this Spring 350,000 grafted Rose plants, 2½" and 3" sizes, to accomplish which 10 men are continually engaged in getting the stock ready. 90,000 of these plants are in condition

for immediate shipment, and others will follow rapidly. When all grafting is complete, the 10 men are shifted to the packing shed, from whence about 5000 plants will be shipped daily, a task consuming no small amount of labor.

Crimsons form another interesting subject, and here the lover of these flowers can see perfection in growth as well as study the various points of every variety grown. It is a Mecca for growers and retailers for a radius of hundreds of miles, and hardly a day passes but what some distant visitor is taken over the place. Nearly all the newer introductions are given a trial, those in flower now including Mrs. J. C. Vaughan, Georgia, and Pink Delight, in all their stages of development; none are carried in stock unless found to be as represented. In the standard varieties, Beacon, Octo-ron, White Perfection and Winsor are given special prominence, while the pink and white Enchantress, Variegated Lawson, Winona, Melody, and a few others are also used for commercial purposes. Many hundreds of plants of this year's introductions are on the benches, the varieties including Alma Ward, Mrs. C. W. Ward and others which the company has listed in its catalog.

Chrysanthemums are grown quite extensively, and for the propagating of these by the thousands two entire houses are planted with stock of such varieties as Virginia Peckham, Golden Glow, Pacific Supreme, Lynwood Hall, Golden Chadwick, as well as many others, including all the best of the standard varieties. Pompons also receive attention, the following list containing some which will be found useful to all florists: In white, Lula, Queen of Whites, No. and Nauglicus; in pink, Leo, Alma, Alena, Aeto and Utan; in yellow, Baby, Quinola, Zenobia, Lodi, Sunshine, and last, but not least, Garza, the well known variety which was so prominent in all the shows last Fall, as well as in the retailers' store windows.

The immense business done in bedding stock alone is enormous, and from this department thousands of rooted cuttings are shipped daily. Coleus, of which the firm carries in stock about 15 of the most useful varieties, including some fancy large leaf kinds, is somewhat of a specialty.

Geraniums, the list of which contains such well known varieties as Marquis de Castellane, S. A. Nutt, Thomas Meehan, Miss F. Perkins, Beaute Poitevine, Mme. Landry, as well as Mad. Sallerot, the well known border variety, are an extensive source of revenue; and other bedding stock, such as Ageratum, Salvia, Alternanthera, Heliotrope, Vincas, etc., find a ready sale among the number of the company's patrons.

Palms, including many of the best varieties of Kentias, Arecas, Cocos Weddelliana, Latantias, as well as Aracarias, and many of the most profitable Ferns of the decorative, specimen and table varieties, are also kept in stock. Foliage plants, too, are a feature, several houses being devoted to the production of Pandanus Veitchii, Dracena terminalis and D. Mandaiana, Adiantum Farleyense, A. canetum, Cibotium Schiedei, Ficus elastica, and F. pandurata, while flowering plants such as Azaleas, Hydrangeas, Hardy Roses, both Hybrids and Ramblers, Genistas, and Begonias are produced at the proper seasons of the year mostly for Easter. Lilies must not be overlooked, 70,000 of which are expected to be in bloom for the Easter trade. The Lily department is very extensive, an immense amount of space and labor being given proper to production. The varieties forced include Formosa, giganteum and multiflorum, from which the company is able to ship Lilies to the various markets at most any time of the year. Credit must be given the man in charge of this department for the fine appearance of all the stock.

Lily of the Valley is forced in such quantities as to enable shipments of about 10,000 each day to be made, the cutting and sorting of which keep quite a

few hands busy, to say nothing of the labor required to keep this immense quantity of flowers obtainable at a few hours' notice.

The production of Orchid blossoms is a department recently gone into, and the expectations are that more stock will be added as space will permit.

Many more interesting things could be told of the products of this establishment which a visit to Cromwell will reveal. Among the advancements in building and conservation of labor might be mentioned an automatically regulated engine, which is used in connection with the cold storage department in which are kept the cut flowers, a system which when once installed means the saving of much labor and worry. The immense steam pump used for pumping manure water to any part of the establishment is a feature which, where possible, should be copied by every florist's establishment large enough to afford such an arrangement. There are huge tanks built of concrete, into which is thrown the manure from about 100 cows kept on the place, thereby providing a constant supply of feed to be applied to any crop needing it at short notice.

The company has its own saw mill, blacksmith, plumbing, carpentry and painting departments, all of which are kept busy the year round.

Space prevents further comment on this interesting establishment, but in closing it may be said that apart from his extensive responsibility, W. R. Pierson finds time to win many prizes at poultry shows with his Rhode Island Reds, and the many ribbons hanging on the wall of a room in his home, bear mute testimony to his ability in this line. One note more: since the construction of the trolley line, which passes the office door, visitors are assured of good connections from either Berlin or Middletown, a fact which is much appreciated by all fortunate enough to travel that way. A. H. S.

Books Received

WELLS' BOOK ON THE CULTURE OF THE CHRYSANTHEMUM FOR EXHIBITION, DECORATION, CUT FLOWER AND MARKET. By William Wells, Merstham, Surrey, England. Fourth edition, revised and enlarged. Published by the author. 124 pages; price 1/6.

The author was recently in America visiting many of our prominent Chrysanthemum growers, and the introductory chapter contains an account of this visit, and a brief history of himself and the three gentlemen who are associated with him in the work of disseminating Chrysanthemums, T. Goacher of Tunbridge Wells, England, Chas. H. Totty of Madison, N. J. and T. W. Pickett of Malyern, Australia, as well as a short résumé of the early history of the Chrysanthemum. Many illustrations enliven its pages, and bring more prominent to the reader's notice the different "breaks" so hard to describe. Insect pests, such as thrip, red spider and green fly are illustrated and described, as well as insect friends and enemies to plant life. Methods of growing 'Mums in England are given at length and there are several half-tone illustrations presented showing leading varieties, as well as some popular single, early flowering sorts. Several chapters are devoted to the preparation of 'Mums for exhibition; packing for market; culture for pot plants; varieties for decoration; varieties for market; soil for potting; stopping—an interesting subject, showing how varieties may be improved by this method; Pompons, Anemones and Singles. The subject of staging and judging at exhibitions is also admirably treated. Altogether, the publication contains an immense amount of "meat," covering every phase of Chrysanthemum culture and handling.

Employees of A. N. Pierson, Inc., Cromwell, Conn.—There are 215 Persons in the Group

New Begonia Glory of Cincinnati
Originated by J. A. Peterson, Westwood, Cincinnati, O.

Pink Cherokee Rose

Begonia Glory of Cincinnati

This new variety of Begonia, an introduction of J. A. Peterson, Westwood, Cincinnati, O., is a seedling from B. Socotrana. It is a strong, robust grower, with soft, satiny pink flowers about twice as large as those of B. Gloire de Lorraine, and, unlike Lorraine, does not drop its flowers. As a variety for store decoration and dwelling house use it is likely to become exceedingly popular. It is being disseminated this Spring.

Pink Cherokee Rose

Rosa laevigata, var. Anemone

This rare variety of the Cherokee Rose is an introduction of the City Nurseries, S. Hockridge, manager, Redlands, California. Cherokee Roses have dark green, thick and polished evergreen foliage. The flowers are single, four to five inches across, on very short stems. They are said to be ideal for pot culture. Grown on solid beds, immense sprays may be cut for Easter. The white variety, Rosa laevigata, is the better known of the type, and has become somewhat popular.

Carnation Dorothy Gordon

Originated and grown by Jos. Heacock Co., Wyncote, Pa. The free blooming qualities of the variety are apparent even to the most uninterested, and its record for price in the Philadelphia market is greater than that received for any other variety. The plants appear very healthy, and respond readily to extra care, a fact which should make it popular with the Carnation enthusiast. The flowers are of an even color, slightly darker than Rose Pink Enchantress, very full, borne on long, stiff stems, and averaging fully 3 in. across. As to its keeping qualities, any Philadelphia retailer who has handled it will speak in its favor. The variety gained an award in the light pink class at the Pittsburgh convention of the A. C. S.

Carnation Dorothy Gordon

Carnation Washington

This variety is a Lawson colored sport of Enchantress, the stock of which was recently purchased by the Chicago Carnation Co., from Henry Eichholz of Waynesboro, Pa. As a sport of Enchantress it needs no description excepting perhaps of the color, which is a cerise, the same shade as Mrs. T. W. Lawson, quite different from other Enchantress sports.

Carnation Washington

House of Carnation Alma Ward. Photographed Feb. 7, 1910

Introduction of the Cottage Gardens Co., Queens, N. Y.

Carnation Alma Ward

This variety is another trade introduction of 1910 by the Cottage Gardens Co. It is a beautiful, pure white, except during dark weather when it shows delicate splashes of pink similar to a Cattleya, a peculiarity which increases its popularity. Alma Ward is considered to be the largest and most fragrant Carnation ever produced and on the exhibition table within the past four years has been conspicuous as a winner of the highest awards, among them the Lawson silver medal, Toronto, 1907, no gold medal having been awarded; the Lawson gold medal, Washington, 1908; silver medal of the Society of American Florists, Washington, 1908; and the S. A. F. bronze medal at the Pittsburgh convention of the A. C. S.

1910. As a fancy variety it has always commanded much higher prices than any other variety in the New York market, and the demand for it has been such that the supply of cut flowers has always been inadequate.

Carnation Mrs. C. W. Ward

One of the most prominent Carnations being disseminated this year is the variety Mrs. C. W. Ward, grown at the well-known establishment of the Cottage Gardens Co., Queens, L. I., N. Y. Although a notable prize winner at the shows within the past four years, it is offered to the trade this year for the first time. Some of the honors it has carried off are as follows: Silver medal of the

Society of American Florists, Boston, 1906; the Craig Cup for best seedling, Philadelphia, 1906; the Lawson bronze medal, Washington, 1908; the Horticultural Society of N. Y. silver medal, sweepstake prize for best 100 blooms, New York, 1909; the Horticultural Society of N. Y. diploma for best new variety, New York, 1909; and the S. A. F. silver medal at the Pittsburgh convention of the A. C. S., 1910.

Mrs. C. W. Ward is a perfectly formed flower with full center; color deep pink, several shades lighter than Lawson, deeper than Winsor; having strong, erect stems, 21 in. to 36 in. in length. It is a vigorous, healthy grower, and has never shown disease of any kind; and is a very early and free bloomer, producing fine flowers as early as Sept. 1, which bring from twenty-five to fifty per cent. more than any other variety on the market. The keeping qualities of this variety are remarkable. Several shipments of blooms sent to Europe reached their destinations in perfect condition, and wherever exhibited it has always been the last to show signs of wilting.

Carnation Princess Charming

This Carnation, shown by H. Eichholz of Waynesboro, Pa., its originator, is described as follows: Color, salmon pink; growth, stem, calyx, of extraordinary strength and size, a giant among Carnations; very free bloomer and practically non-splitting.

Carnation Princess Charming

New American Rose Panama

This new Rose was shown at the Jardin des Bagatelles in Paris, June, 1909. The scoring of Panama at Bagatelles was eminently satisfactory, and was preliminary to a final appearance next June, after a second Winter outdoors there. The E. G. Hill Co., its originator, describes it as follows: "This seedling is a very strong growing bedding variety, a cross between Mme. Jenny Gillemot and Paul Neyron. The flower is extremely beautiful, from a long pointed bud which has large enclosing outer petals. The color is white and salmon flame, very much the same tint as in Viscountess Folkestone, but much intensified. The variety is bushy and strong growing and promises to be a first rate bedding variety. It scored 8 points at the Bagatelles, being exceeded by only one variety, one of M. Pernet-Ducher's seedlings, and we are hoping that at the second scoring, which will occur next June, it may attain the highest number of points after being thoroughly established, as the plants which were judged this year were only sent across the water last January (1909). We feel quite proud of its record thus far, and feel sure that it will be a delightful addition to our list of fine garden Roses.

E. G. Hill Co.'s New American Rose "Panama"

We have not yet tried it outdoors over Winter, but believe that its Paul Neyron parentage will render it hardy even in our northern climate."

Carnation Conquest

Conquest is a variegated variety introduced by the Chicago Carnation Co., Joliet, Ill., and is considered to be one of the best of its type since the days of Prosperity, all the good points of which variety it seems to possess, including its free blooming qualities and stiff stem. In color it is a light flesh pink as a background, overlaid with a deep rose pink extending clear through the petals.

Carnation Conquest

Carnation Shasta

The photograph herewith is of a bench of Carnation Shasta, a meritorious introduction of Baur & Smith, Indianapolis, Ind. The bed is one of 1800 plants, from

which, up to January 1, over 15,000 blooms had been cut, and it is still producing just as heavy as ever. As a money making white Carnation this variety probably has no equal among those on the market today.

A Bench of Carnation Shasta at Baur & Smith's, Indianapolis, Ind.

Planted Aug. 1, 1909. Photographed Dec. 1, 1909.

Carnation Admiration

The flower of this variety is of a beautiful shade of pink, somewhat lighter than Winona, and having a beautiful satin finish. The size of the flower is 3 to 3½ in., of excellent form, well built up in the center, with an arrangement of petals admirable for a fancy commercial variety. In habit the plant is upright, with very little surplus grass, and every shoot making a flower. It is very free and comes into bloom early. The calyx is very tough and seldom bursts. The flowers have been found to keep well and make excellent shippers. The variety is introduced by the Chas. Knopf Floral Co., Richmond, Ind.

Carnation Admiration

New Seedling Iris Juniata

A promising new seedling Iris, named "Juniata," has been originated at the establishment of Bertrand H. Farr, Wyomissing, Reading, Pa. This Iris is similar to

I. pallida but is much taller than that variety, and the foliage is very long, giving it a very graceful and drooping effect. Mr. Farr says that out of 400 or more varieties of Iris grown by him there is nothing to compare with *I. Juniata* in height, which is about 4½ ft. Mr. Farr is the president of the American Peony Society.

Carnation Norwood

This seedling has been grown for some time by the Robt. Craig Co. at 49th and Market sts., Philadelphia, Pa., and was last Fall transferred to the company's new establishment at Norwood, Pa., where four benches of it may be seen growing. It has been thoroughly tested and has proved a winner, consequently is to be disseminated next year. The flowers are pure white, borne on strong, wiry stems. The variety blooms early and con-

Carnation Norwood

tinues right on throughout the Winter season, producing good-sized blooms. It is purely a non-splitting variety, and as grown with other varieties in the same house, and given the same treatment, it thrives well. All the plants are in a healthy condition, and under general cultural methods respond quickly, new growths showing from four and five dormant eyes as rapidly as can reasonably be expected after developed flowers have been cut. The flowers open quickly, and they have proved their keeping qualities many times over. It was exhibited at the A. C. S. convention, Pittsburgh.

Carnations Bon Ami and Granite State

Bon Ami and Granite State are two new Carnation seedlings, the result of crossing Queen upon Lady Bonafide in the year 1905, by George E. Buxton of Nashua, N. H. Both are white in color but of entirely different habit. Bon Ami in habit is quite similar to White Perfection, but makes a much better plant in the field. It has always been the first to come into bloom, bearing a very heavy crop of first-class flowers about the middle of October and continuing throughout the season with a crop equal to any of the commercial white varieties of today. Its blooms are of good size, being on an average 3 in. in diam. with many flowers, and when at its best 3½ in. in diam. The stems are long and very stiff, holding the bloom perfectly erect.

Granite State, although the result of the same cross as Bon Ami, was not from the same seed pod. The habit of growth is all that the critical grower could ask for. When housed in August the plants are in appear-

Carnation Bon Ami

ance very much like the grand old variety Wm. Scott. The stems are of extra length and hold the flowers in a graceful, upright manner. The blooms are of good size, being from 3 to 3½ in. in diam. For freedom of bloom, size of flowers, health and habit of growth, with practically no split calyxes, Mr. Buxton sees no reason why this Carnation should not fill the long felt want for a good commercial white. Granite State will be disseminated in 1911.

Gladiolus Gaiety

Gladiolus Gaiety was raised by Harry G. Wolfgang, Leetonia, Ohio, and that gentleman says that in general appearance it resembles *G. princeps*, but is much more dwarfed. He has had it growing with him for nine years and deems it a beauty.

Asparagus Elongatus

This species, like most of the others, is a native of South Africa from whence it was imported. It is an upright grower, sending out stems from four to seven feet in height, terminating in a broad head of fine, fluffy foliage. These are covered with thousands of small, whitish flowers which give it the appearance of the well-known Baby's Breath (*Gypsophila paniculata*), and in that condition it is the most beautiful object to use for decorating as, with its light green foliage and its fine, whitish flowers interspersed among a dozen Roses, Carnations or other single-stemmed flowers it makes a handsome bouquet.

When better known it will no doubt become one of the most useful greens for cut purposes, as it is the only Asparagus having upright stems and so is well fitted for decorations of long-stemmed flowers. Being of a very lasting quality, like the other varieties, it will be found a welcome addition to the list of plants used for decorative purposes.

To the growers it will prove a most profitable plant as, after cutting down the stems, it will branch out and quickly send up a new growth, which will be ready to cut again in a few weeks; thus it could be properly termed "Cut-and-Come-Again Asparagus."

Kroeschell Bros. Co., Greenhouse Heating Engineers, Chicago

The Kroeschell Greenhouse Generator The Kroeschell 1910 Novelties

We are now supplying on all orders our 1910 model of the Kroeschell Hot Water Boiler, which is an improvement on the "Kroeschell" of the past. The following main features of the boiler have been strictly adhered to: Crown sheet fire surfaces; thin water ways; long fire travel. The fire box and combustion space have been largely increased, resulting in greater efficiency than obtained by any other form of construction.

The Kroeschell "Giant" No. 16 Boiler, net working capacity 20,000 ft. of 4-in. pipe, is the new size designed for central heating systems.

A New Departure

We are now offering our new Kroeschell Water Tube Steam Boiler for large steam and power plants; capacity of this type of boiler ranging from 150 to 600 horse power. Compactness, effectiveness of heating surfaces, economy, durability, steady water line, and even steam pressures, are the features of this type of boiler.

The Kroeschell 1910 Model Shaking and Dumping Grate

Burns any kind of coal. The shaking and dumping arrangement is very strong. No complicated machinery to get out of order. This grate is self-cleaning at every move and clinkers cannot cling to the fingers. All parts are made strong and heavy, and at the same time 50 per cent. of air space is obtained, a desirable and long sought for feature, giving better combustion. The fingers are all cast in separate pieces, which reduces the cost of repairs to the minimum; all finger pieces are interchangeable and can be readily replaced at a trifling cost. This grate is made to fit every type of boiler or furnace.

During the past cold spell, many Kroeschell Generators were installed in all sections of the country, and out of the many hundreds sent out but one was returned

Everybody is praising this apparatus, and almost daily we receive such reports as:

"The Generator saved my place." "I could not live without the Generator." "The Generator is making Summer heat for us." "The Generator equalizes the temperature in our houses and, besides, saves fuel."

"The Generator makes the returns much hotter than they were with the old gravity system." "Since using the Generator the heat of my hot water pipes is equal to steam." One of our customers writes: "The Generator is doing everything you claim for it, and has made a wonderful improvement in our heating system, but what makes this 'blind' machine work?"

We will endeavor to explain here the operation of

Elevation Drawing of Kroeschell's New Water Tube Steam Boiler

the Kroeschell Greenhouse Generator, which was designed especially for greenhouse heating.

By a careful study of Figs. 1, 2 and 3, and a perusal of the following description, a perfect knowledge of just how the Generator operates, to produce varying pressures of from 0 to 10 pounds, may be obtained. When the water in the system is cold, the mercury 11, Fig. 1, will all lie at the bottom of the mercury pot 7.

Dimorphotheca Aurantiaca

This is a rare and exceedingly showy annual from Namaqualand, South Africa, of very easy culture. The plants, of neat branching habit, grow about 12 to 15 in. high and are exceedingly profuse in flowering. Its Marguerite-like blossoms, $2\frac{1}{2}$ to $2\frac{3}{4}$ in. in diameter show a unique glossy, rich orange-gold color with dark-colored disc surrounded by a black zone. It is well adapted for groups or borders, produces its pretty flowers very early after being planted out in the open ground in sunny situations, and will continue to flower during the Summer. It gained an award of merit at the Temple Show, London, in 1907.

Catalogued by all the leading seedsmen.

and all other parts of the Generator will be full of water. Before the Generator can operate, all interior parts must be submerged in water.

When a fire is started in the boiler the water is heated and begins to expand or increase in volume; this expanded water flows into the Generator at 6, and causes the water 9, to press down on the mercury 11, Fig. 1. The expansion of the water thus forces the mercury down in the mercury pot 7, and up through the circulating tube 4, and stand pipe 5, Fig. 2.

As the water continues to expand the mercury will continue to rise in the circulating tube 4, and standpipe 5, and will lower to a corresponding extent in the mercury pot 7, Fig. 2, until it lies level with the top of the circulating tube, inlet 14, Fig. 3. At this time the mercury is level with the top of the circulating tube 4, and standpipe 5, Fig. 3.

The water having forced the mercury down slightly below the top of inlet 14, Fig. 3, will pass over the mercury, at 13, Fig. 3, into the circulating tube 4; the water, being over thirteen times lighter than the mercury, will pass very rapidly through circulating tube 4, constantly carrying a quantity of mercury with it. When the water and mercury reach the top of the circulating tube 4, the water will pass up and around the deflector 2, Fig. 3, and out through opening 1, to the expansion tank.

The mercury which is driven upward with the water in the circulating tube 4, will not return through this same tube, but will return through space 8, or the standpipe 5, thence out through space 15, into the mercury chamber of pot 7, thus raising the mercury level in the mercury chamber, and operating in a manner similar to a balanced valve to regulate the passage of water through the circulating tube 4.

From the above description it is apparent that a positive circulation of the mercury, upward through the circulating tube 4, and downward through the standpipe 5, Fig. 3, is attained under all normal working conditions, thus positively retaining the mercury within the circulating tubes of the Generator. It is also apparent that a 10 pound pressure will be produced and maintained and at the same time permit all excess water of expansion to pass freely into the expansion tank.

When the water throughout the system cools and contracts, the exact reverse of the above operation takes place, and the mercury will gradually lower in the circulating tube 4, and standpipe 5, and rise to a corresponding extent in the mercury chamber of pot 7, Fig. 2. If the water continues to cool, the above action will continue until the mercury will all lie in the mercury chamber 11, Fig. 1. A pressure of $\frac{1}{2}$ pound at 1, causes the water to flow from the expansion tank downward through the standpipe 5, outward through space 15, thence upward through the mercury 11, Fig. 1, and out through 6, into the system.

To drain the Generator, remove plug 10. The Kroeschell Greenhouse Generator is manufactured in three sizes for gravity circulation, and special sizes for forced circulation heating systems.

Fig. 3

Introductions of the King Construction Company, Horticultural Engineers, North Tonawanda, N. Y.

The King Iron Frame Greenhouses have been on the general market for such a short time that they come easily under the class of new things for 1910. These iron frame houses are built up to 54 ft. wide without any purlin posts. The iron frame greenhouse has for many years been regarded as the "top notch" of greenhouse construction, but within reach of only the most prosperous, until the advent of the "King Iron Frame Construction."

The first style of iron frame greenhouse was built with flat iron rafters, usually supplied in one piece, starting at a channel, bent at the eaves, and continuing to the ridge. These rafters were supported by posts for wide spans and, in connection with angle iron purlins, formed the iron frame of the house, which carries the wood-work and balance of the structural material.

In the King type of iron frame house, the rafters are made of pipe, stiffened by truss work, and the corners at the eaves reinforced by diagonal bracing. On the forms made up in this way rest continuous purlins of 1 1/4" pipe, which also strengthen the house longitudinally. In this way the complete iron frame is made up at low expense and brought within the reach of the average commercial grower. As a further reduction of expense the owner may furnish the pipe himself.

The accompanying cut illustrates a 50-ft. wide King Iron Frame Greenhouse, the same kind that is proving so satisfactory in many localities.

A 112-Ft. Wide Greenhouse for Germany, the Material for Which Is Now in Preparation

Among the novelties of 1910 the King Curved Iron Eaves is one of the most important to greenhouse people. It is absolutely the most ice clearing and least shade producing metal eaves that has been brought out. It gives all the advantages of curved eaves, but the curve is in the iron, all glass straight, so that it eliminates the trouble and expense of using bent glass. As you can see, the iron eaves is of the same thickness as the glass, and as far as ice clearing qualities are concerned, is the same as though the glass were bent around the corner, where the upright glass of the wall and roof glass would meet.

Iron is a better conductor of heat than glass, so that there is less danger of ice forming on this eave than on the glass itself. Being made of malleable iron, this eave is amply strong for the position in which it is used and the manner of making connections to it. It has nothing to do with the strength of the house, as it only acts as a glazing strip, between the side and roof glass.

Any one contemplating building should investigate this new idea and the investigation will mean conviction that it has more advantages than any other eaves on the market.

The King Iron Frame Construction lends itself very readily to the construction of extremely wide houses, by the use of a combination of posts and trussing. In this way the houses for the Florex Gardens were constructed, their house built in 1909 being 172 ft. wide and 700 ft. long, the largest greenhouse in the world.

These wide houses are economical in construction and maintenance, and produce results that are the supreme attainment from a grower's point of view.

These houses are famous in America and their fame has spread across the ocean to Europe. The King Construction Company are now preparing the material for a house 112 ft. wide for Germany, which is here illustrated.

Part of a Shipment of 805 Bales of Raffia, Recently Received from Madagascar, by McHutchison & Co., 17 Murray St., New York

The King Curved Iron Eave

John W. Duncan
Recently Appointed Superintendent of Parks,
Spokane, Wash.

John W. Duncan Goes to Spokane

John W. Duncan, Assistant Superintendent of Parks, Boston, has been appointed Superintendent of Parks of the city of Spokane, Washington, and left Boston Thursday, Feb. 24, for the Northwest.

His friends in Boston, and in fact all New England, are indeed sorry to lose him. He has had a call (like the ministers) to a wider field of usefulness and he must obey. So we are all rejoicing that such an important position has fallen to a Boston man. There are few men who get such an opportunity as has come to him. He is going to practically a new park system where he will have ample scope to show his ability. We have not the slightest doubt that Mr. Duncan will make a reputation for himself and lay out a magnificent park system for Spokane, for which his training in Europe and in this country has given him ample qualification.

John Walker Duncan was born Feb. 28, 1868, in Aberdeenshire, Scotland. He served his apprenticeship under his father at Glack House, Aberdeenshire, who had charge of this fine old estate and famous gardens for 35 years. During the time spent there he gained much valuable information about trees, shrubs, and herbaceous plants. His father had, at Glack House, the best collection of Araucarias, Sequoias, Rhododendrons, evergreens and herbaceous plants that were in the North of Scotland at that time.

Mr. Duncan came to this country about twenty-four years ago and started work under one of his own countrymen at the W. D. Pickman estate, Beverly. After leaving Beverly he went to the G. A. Nickerson estate, Dedham, Mass., which was noted at that time for its excellent collection of stove and foliage plants, and it also had a good collection of conifers. It was at the Nickerson estate that the writer had the pleasure of first making the acquaintance of the subject of these notes, resulting in a fellowship which has lasted through these many years.

For about ten years Mr. Duncan lived in Connecticut and had charge of several large estates there. When he had charge of the W. H. S. Ward estate (Conn.) it was famous for its splendid collection of ornamental trees and shrubs as well as for its herbaceous plants. All this time he used to exhibit regularly at the American Institute shows in New York, and his exhibits of herbaceous plants and shrubs used to be the leading features of the exhibitions.

He came to Boston nine years ago as assistant superintendent of parks and is leaving now with the kindest wishes of all his friends.

He has been especially active in horticultural matters in Boston. He worked continuously for the welfare of the Gardeners and Florists' Club, and also did much valuable work for the Mass. Hort. Society, of which he is a life member; he has held many offices in both organizations, and he is the president of the G. and F. Club of Boston for this year.

Mr. Duncan is and has been an active member of the American Association of Park Superintendents. He was secretary and treasurer of this organization for several years, was vice-president one year, and president last year. He is also an honorary member of the New England Cemetery Superintendents' Association.

Mr. Duncan was given a complimentary dinner by his friends and associates at the Parker House, Boston, on Saturday, Feb. 19.

[As is known to every reader of The Florists' Exchange, Mr. Duncan has filled the position of its Eastern representative for almost six years, beginning early in

1904. When Mr. Duncan undertook the position he told us he would "make it known that Boston was on the map," and well has he acquitted himself, for he filled the position to our utmost satisfaction and with credit to himself and his city, using tact and good judgment in all matters. We unite with his many friends in wishing him great success, health and happiness, in his new and larger undertaking.—Ed.]

The complimentary dinner, which was tendered to John W. Duncan by his friends and associates at the Parker House, Boston, on Saturday evening, February 19, was an event that will be long remembered among the craft of Boston. It was a remarkable gathering; there were Scotch, Irish, English, American and many other nationalities represented by park superintendents, cemetery superintendents, florists, gardeners, seedsmen and market salesmen, and they all joined as one in wishing the guest of the evening the greatest success in his new position at Spokane.

Fifty gentlemen sat down to dinner at 7 p.m. After full justice was done to the inner man and cigars were lighted, Toastmaster John K. M. L. Farquhar made a few preliminary remarks, and as Mr. Duncan had never announced in public that he was leaving Boston he introduced him as the first speaker of the evening. Mr. Duncan made an excellent speech, giving in detail a fine description of Spokane and its parks, and also relating the grand opportunities in the far Northwest. Thomas MacCarthy, supt. Swan Point Cemetery, R. I., was the next speaker, and we think he must have kissed the blarney stone in his early days. For fifteen minutes he kept the house in roars of laughter with his wit and humor. James Scorgie, supt. of Mount Auburn Cemetery, told some capital stories about the "land o' cakes" which were greatly appreciated. He spoke very highly of Mr. Duncan and his abilities, and thought Spokane was fortunate to get such a competent man. Mr. Ross, supt. of Newton Cemetery, made many kind remarks about Mr. Duncan and wished him every success. Wm. N. Craig made a capital speech, as usual, and said he hoped although Mr. Duncan's facile pen was silenced at present for Boston, that they would hear from him in the West through the medium of The Florists' Exchange. He wished Mr. Duncan much success in Spokane. Other speakers were Thomas Grey, Thomas Westwood, David Weir, Jas. Wheeler, Frederick Green, supt. of Roger Williams Park, Providence, R. I., Peter Miller, Edward Rogers, Thomas Butterworth and Robert Cameron. Mr. Farquhar made a very efficient toastmaster. It was admitted that the cemetery superintendents were the jolliest and best story tellers of the evening, and although they have been many years in the cemeteries they are certainly quite lively yet. The banquet was brought to a close at 11 p.m., and all joined in singing "Auld Lang Syne." Many promised to be at the South Station on Thursday, Feb. 24, at 2 p.m. to say farewell to Mr. Duncan.

Syringing Peach Trees

"Will you please inform me through your paper when Peach Trees under glass should and should not be syringed. The principal thing I would like to know is, should they be syringed when they are in flower?"—Subscriber.

Peach trees should be syringed from the time the heat is turned on. Conditions must govern us in this respect. It is not necessary to spray in very cloudy, damp weather, but in clear or even partially clear it is very essential if the atmosphere is dry. From the time the trees are started until they commence to bloom they may be syringed two or three times a day when there is clear weather. It is not necessary to spray heavily, just enough to moisten the wood and to cause a moist congenial atmosphere. It is poor policy to spray heavily as this would have a tendency to saturate the surface of the border or tubs, as the case may be, with the probability of drying at the bottom—a very unsatisfactory condition. As the Peaches commence to blossom stop syringing, and keep a fairly dry bracing atmosphere, it being absolutely necessary to have the pollen dry around midday. Peaches that are in bloom at this time require hand fertilizing, continuing until the bees get plentiful, when it is not necessary to pollinate the blooms. The pollen can easily be distributed with a camel's hair brush—a rabbit's tail tied on a stick is really better than the brush. Go over the blossoms lightly when the pollen is fully ripe. If the pollen is dry, and the bloom in proper condition, the brush will be loaded with pollen. In a short time this should be repeated until all the blooms have been set, as some blossoms open in advance of others. After the fruit is set syringe again, morning and afternoon. Just as the sun begins to lose its strength is the best time to spray in the afternoon, and in the morning before too hot. I may also state, when setting the fruit, particularly in bright weather, after the fruit has been set at midday, the house may receive a light damping down, but no more damping until the following day at the same time, having in mind securing a dry atmosphere before night. Always admit air when the temperature goes above 60°, although not to the extent of lowering the temperature, but rather allowing the temperature to increase. Still, it is not advisable to allow the thermometer to register much above 60° without a crack of air.

There is no trade medium published that begin to equal the EXCHANGE in giving returns to all of its advertisers. Test it for yourself.

Chas. L. Washburn
Elected President Illinois State Florists' Association

The American Carnation Society

Registration

Registration of new Carnation by Frank E. Whitney, Gardener to Winthrop Sargent, Fishkill-on-Hudson, N. Y.

WOODNETHE, Prosperity X Enchantress; pure white, 3½ to 4", strong erect grower; runs to flowers quick; beautifully formed, full flowers with the mid clove scent; strong calyx, seldom splits; scored 90 points for preliminary certificate at A. C. S. Convention at Pittsburgh. A. F. J. BAUR, Secretary. Indianapolis, Ind.

Charles L. Washburn

President Illinois State Florists' Association

Charles L. Washburn, recently elected president of the Illinois State Florists' Association, was born February 27, 1858. He commenced work, at the age of 15, in the lumber woods, and kept at the lumber business until 1893 when he formed a partnership with his father-in-law, O. P. Bassett. The firm then started building greenhouses and growing flowers for the trade. They commenced to sell their flowers under their own name the same year, and have continued doing so ever since, selling only their own stock. Mr. Washburn bought Mr. Bassett's interest in the firm four years ago, but still conducts the business under the old firm name. Mr. Washburn married Miss Kate Bassett, the only child of O. P. Bassett, in 1884, and has one son, Edgar B. Washburn, who is associated with his father in the business. Mr. Washburn is a widower, his wife having died in 1902.

The Value of the Experiment Station to the Florist and the Duty of the Florist to the Station

An Address by Prof. J. C. Blair, Head of Department of Horticulture, University of Illinois, Urbana, Ill., delivered before the Illinois State Florists' Association, Urbana, February 15, 1910.

In order to fully appreciate the value of the experiment station to the florist, it is necessary at the outset to have some conception of the nature and scope as well as the function of this great public institution, known as the Experiment Station, which has sprung up throughout the length and breadth of the land. These institutions are really the outgrowth of the discussions which took place at the meetings of our old time agricultural societies. Various kinds of model farms and test stations were proposed, with here and there a real start made. The first station was a private institution established by Mr. L. Valentine at Houghton Farm, Orange County, New York, in 1876. An effort was made by the State of Connecticut in 1873 for the founding of an experiment station but the bill failed to pass. It was this same year that the Experiment Station at California was established and 1879 when the Cornell Experiment Station came into existence. But our experiment station system in this country was not definitely established until 1887, as a direct result of Federal appropriations for that purpose. Since the passage of this, the first Hatch act, there has been some modification in the laws governing these institutions, and as the work has grown and

enlarged additional appropriations have been made. Yet from the first the intent and spirit of the law was the same; namely, "that it shall be the object and duty of said experiment stations to conduct original researches or verify experiments on the physiology of plants and animals; the diseases to which they are severally subject, with the remedies of the same; the chemical composition of useful plants at their different stages of growth; the comparative advantages of rotative cropping as pursued under the varying series of crops; the capacity of new plants or trees for acclimation; the analysis of soils and water; the chemical composition of manures, natural or artificial, with experiments designed to test their comparative effects on crops of different kinds, etc.

Surely, here is a law, the nature and scope of which is sufficient to take in all the problems relating in any way to the business of floriculture. But if we glance back over the twenty-three years that these stations have been in operation, we see at once that the old-established lines of agriculture, or those which have to do with all outdoors so far as the farm is concerned, have been the ones to receive special attention and the bulk of the money. It is not until a very recent date that the florist's business in this country was thought to be of sufficient importance to receive the special attention of investigators in these public institutions. In fact, as I have gone down over the list of publications which have appeared as a result of these Federal and State appropriations, I am surprised to find that out of literally thousands of bulletins and circulars, there are but forty-seven which are especially designed to be of help to the florists and gardeners; yet, considering the fact that the florists themselves have not until recently been making any demands upon the experiment stations for help, this list really seems a commendable one. Scanning the pages of these publications which have appeared, we find many things of real and positive help to the florist's business. Take, for example, the work which has been done by various pathologists on the diseases of many greenhouse plants. How can we ever fully estimate the benefit derived from this source alone? If we take these and the many other things accomplished as an indication of what may be done in the future and then stop to reflect upon the rapid rise of the different phases of the floricultural business during the past dozen years, we shall be in a better frame of mind to correctly anticipate what the future holds in store for us. Think for a moment of the step in advance which will be taken when we actually arrive at that stage in our State history when Illinois will have invested in this business \$100,000,000 instead of \$20,000,000 as at present. Of what value will this enormous floricultural industry in this State be if we do not actually learn how to throttle the insect pests, or if we do not know the correct combination of those materials and elements which go to make up the proper plant food of each of these ever varying and complicated types which we grow for the delight and comfort of the multitude. We have at least one firm in Chicago which cannot really secure a sufficient amount of the organic fertilizer (manure, if you please) which is now required for their establishment. This has become so serious a problem with them that, I understand, they are contemplating establishing upon their premises a large dairy herd whose chief business it will be to make fertilizer with which to grow the dainty blossoms that are to grace our tables. Now, it is not too much to expect that this experiment station, through the experiments already in hand, will definitely ascertain what combination of chemicals or commercial fertilizers can be, in part at least, substituted for the now very precious stable manure. It is my firm belief that there is no industry in the State which will receive a fuller measure of benefit from the money spent in its behalf than will floriculture.

The fact that this industry is confined largely to the area encompassed by 20,000,000 sq. ft. of glass, or approximately 400 acres, makes it apparent that we are dealing with control conditions, in large measure at least, and the influence which we can exert upon our plants is greater by far than upon those crops grown in the open. Now, the particular way in which the experiment station will be of most value to the industry, will be in the development of new forms or types better adapted to the requirements of our advancing civilization. Yet of no less importance will be improved cultural methods which must come from long-continued experiments designed to shed light on the food requirements of the different varieties grown under glass. There must be a constant effort to improve existing types. Not only that, but these must be protected from the innumerable enemies which beset them with ever increasing vigor as the industry expands. Again, the trade resulting from this industry must extend into every section of the country and this means that facilities for keeping and transporting flowers must receive careful attention and investigation.

As I allow my mind to project itself into the future, I see with a certainty that is most encouraging, the thousands of commercial establishments that have grown up within our State furnishing their thousands of employees with a comfortable living, bringing upon the tables, and into the very life of all our citizens, that refinement, that grace, that sweetness of character which comes alone from intimate association with and love for flowers. It will be not alone the commercial florists that have profited, nor those who have labored in one phase or another of the industry as helpers, but also all the people who will have learned to appreciate the value of a flower. How will all this have been made possible? I believe I can see with sure vision that it is because the investigator has worked long and faithfully on one after another of the many problems which you practical growers have called to his attention. Nay, you have not only called his attention to these things but you have insisted that our laboratories, our glass houses and our other equipment shall have been used or applied to the problem unceasingly until its solution shall have been found. Not only that, but you have seen to it that the State has wisely appropriated the money which has been given back to the people, a hundred, yea, a thousand-fold, through added beauty, pleasure and profit. When all this shall have been accomplished, can we estimate the true value of the experiment station to the florist?

It is the duty of the florist, individually and collectively, within the State to support in every legitimate way the work of their experiment station. The chief reason for this is the fact that it is you, the florists of Illinois, who have secured the appropriations and who are really responsible for the work undertaken. Most of you know, but there are many apparently who do not know, that there is a State law which says that the experimental work in floriculture undertaken by the University shall be along lines agreed to by the director of the experiment station and a committee of five, known as the floricultural advisory committee. This committee is appointed by the State Florists' Association. It is a committee of your own selection.

It is, therefore, understood that this body of people selects five of its most progressive and representative men who shall give to the work their best thought and energy. Not only that, but these five men, being the representatives of the florists at large through their State organization, bring the mature and ripened judgment of all the best florists within the State to the meetings with the University officials. It is here, at these meetings between the advisory committee and the station officials, where the plans are matured after the most careful deliberation. I recall with a keen sense of satisfaction the wisdom and foresight which was brought to bear on the

work by the five men whom we have met from your Association during the past two or three years, and I assure you, gentlemen of the convention, that if the work has been faulty, or if this institution has not accomplished all you have expected of it, it is not because of neglect on the part of any of these, our associates in the work. Hour by hour through many a long day, and well into the wee hours of the night, have the members of this floricultural advisory committee deliberated with us, seeking ways and means looking toward the best development of the work. I repeat, therefore, that what has been done has been your work. The work has not only been planned but pushed forward for you and by you through this superb co-operation which means so much in the way of public service. In the largest and best sense the entire University is your University, but the floricultural work in the College and in the experiment station, is in a peculiar sense your own. You, through your representatives on this committee, have made the plans; we here are your servants striving in every way within our power to carry them out. It is, therefore, your duty as florists, to make your wishes known and to co-operate with us through your splendid organization. If you have problems on which you want help, remember that this floricultural plant which we have built belongs to you. It does not belong to me or my associates, and we exhort you to make the equipment and the possibilities which lie within it serve your purposes in the best possible way. If the work does not come up to your expectations, or if all the things that you wish for are not being done, I beg you to make your wants clearly known. Remember, too, that when the work is undertaken and in progress we expect you to stand by it and by the people who are putting their very life into it. If we all, in the Association and in the University, have but done our part, I am sure there will be no cause for complaint. One other thing, please remember that it costs money to build houses of glass, the same as it costs money to build houses of stone or brick. It costs money to develop here an experimental plant which will enable us to serve the floricultural people of Illinois, just the same as it costs money to develop a commercial establishment. It is your further duty, therefore, as florists, to make your wants known not only to us but to your senators and representatives, to the end that when these people meet at Springfield to decide on the very best way to dispose of the \$20,000,000 of State appropriation, the florists, who are heavy taxpayers, will not be forgotten. So, let me again remind you that you have a serious duty, a constant and ever present duty toward this your newly developed child at the State University. This youngster will need not only to be fed and clothed but it needs some brothers and sisters. We have an excellent range of houses, but these must be devoted for a long term of years to the special problems for which they are now being used. If we are to do your work in the largest and best way we must have Rose houses, Chrysanthemum houses, Violet houses and Orchid and Palm houses. What we have done thus far is but a beginning. We must go forward until there is here on the campus of your University an equipment for floriculture which will mean as much to this industry as does some of our other equipment to the other industries of the State. If, when this is all done, it should chance to be that we have not succeeded in adding one jot or tittle to the sum total of floricultural knowledge, the effort will have been worth while and the money will have been wisely spent because by it and through it there will have been developed in the hearts and minds of these three or four thousand students a love for and appreciation of flowers, the importance of which can only be appreciated by you men who spend your lives in this, the noblest profession or calling of mankind. Shall we do our full duty; can we be made to see the glorious opportunity?

Delegates at the Illinois State Florists' Association Convention, Champaign-Urbana, Ill., Feb. 15-16, 1910

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

A Floral Valentine

A unique floral valentine, and one attracting much attention when on display was the casket here shown, and which was originated by Young & Nugent, 42 W. 28th st., New York. It was the work of Wm. F. Maniff of that firm's establishment. A frame of wire gauze, somewhat conical in shape, and having a hinged cover, was lined with Asparagus Sprengeri, and the cover, or top finished with Mrs. Lawson Carnations and Lily of the Valley, the whole decorated with pale green ribbon. Reposing inside the casket were several sprays of Cattleyas. The designer explained that candies, perfume, or other gifts could also be used for filling. A similar casket was exhibited by the firm at the meeting of the New York Florists' Club, February 14, in this case sprays of Phalaenopsis being used instead of Lily of the Valley.

Shivers Floral Company

SAN FRANCISCO, CAL.

"Cheapest of Flowers Always on Hand."

Valentine Casket—Open

By Young & Nugent, New York.

IN THE GARDENING DEPARTMENT of the German Royal Agricultural Academy at Bonn-Poppelsdorf, a Potato plant was last year made to do a double Potato-day's work, bearing Tomatoes above and its own tubers below ground, at one and the same time. This is not as Burbankian as it might seem, for it was merely an instance of successful grafting. The Potato plant was raised in a pot in the greenhouse. When it had attained the desired growth, three Tomato shoots were grafted on the Potato stem. Within two weeks the union was completed, and a few weeks later eighteen Tomatoes and eleven Potatoes were picked, the former were not quite ripened as the Potato leaves withered prematurely. The Handels-gaertner, which quotes the story, while dwelling on the curiosity of this growth, adds that such experiments do not answer practical purposes, since growers generally want either a full harvest of Potatoes or of Tomatoes.

John Breitmeier's Sons

DETROIT, MICH.
Broadway and Gratiot Ave.

We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

Bertermann Bros.

INDIANAPOLIS, IND.

BLUNDER RIBBONS

are usually cheap Ribbons that look all right until you use them with your decorations, and then you wish you had something different. Something different in Ribbons, are the qualities that bear **THE PINE TREE LABEL**. These are the Ribbons for Novelty decorations, funeral decorations, banquets, weddings, etc.; they are rich toned Ribbons, have a high lustre, are soundly constructed and yet they often cost little more than these Blunder Ribbons.

You will find it pays to use the best Ribbons especially when you can get them at our close quotations direct from the Mill.

Sample swatches will prove values. A postal brings them

Orders by Telegraph

For twenty-five cents, cash, we will forward you a handsomely printed card, worth framing, which you can hang in a conspicuous part of your store, to let your customers know you "fill orders for flowers, plants or floral designs to any point" by telegraph.

A copy of Arnold's Florist's Code, price \$2.50, will give you a key for the cipher transmission of orders to any of the advertisers in our "Directory of Reliable Retail Houses." All for sale by

The Florists' Exchange
No. 2 Duane St., N. Y.

Headquarters for Easter Plants
AZALEAS One of Our Specialties

PREPARE FOR EASTER

Have Azaleas to burn, the best in the land, the best in the land, the best in the land, Azaleas in finest colors, to beat the band, to beat the band, to beat the band

If you would know the fairest sight your eyes can ever see, Where the most perfect plants are grown, To Aschmann's come with me. Why? No! Since flowers began to bloom was such a glorious show Of all the best that florists need found in one place to grow. The Lilies are the very best yet seen on Easter day. Azaleas are whole sheets of flowers, perfect in every way. The Araucarias matchless are, so are the Ferns all green. With bulbs and potted Spirea, the best you've ever seen. And Aschmann gives a challenge, let every florist hear. For flowers, or prices, either, no rival does he fear. If you wish to gather dollars like violets in the Spring, Then send your largest order; his plants the cash will bring.

CHANGING DON'T PAY!!

From whom will you buy your Easter plants? "I have no cause to change," several sensible men in the trade remarked the other day. "Our friend, Godfrey Aschmann of Phila., has been our reliable man of the past and shall, of course, be this year also."

Azalea Indica

In large sizes we have the following varieties: Bernard Andrea alba (white), Niebe (white double), Dr. Moore (double pink), Memory de Van Houtte (large-flowering double pink), Mme. Van der Cruyssen (double pink), one of the best known varieties), Helena Tellman (rose; very attractive), Empress of India (double variegated), Schreverianna (double variegated), Apollo (red), all covered with buds. Price: \$1.50, \$2.00, \$2.50 to \$3.00 each.

In smaller sizes we have Empress of India (double variegated), Simon Mardner (double pink), Vervaeana (one of the old standard double variegated), Apollo (red), Mme. Van der Cruyssen (pink), the standard of all the pinks), Deutsche Perle (double white), Schreverianna (double variegated). Price: 75c., \$1.00, \$1.25 to \$1.50.

Prof. Wolters, one of the so well known bright variegated, \$1.00, \$1.25 to \$1.60.

AZALEA Indica, one of our specialties for the last twenty-five years. Raised for us under contract by our Azalea specialist in Ghent, Belgium. Our stock of Azaleas that we ship is well known to our customers; it is the cream of Belgium exportation—full of buds.

What is the best pink variety? Mme. Van der Cruyssen is the name; originated by Mr. Van der Cruyssen of Ghent, Belgium. This variety is too well known by nearly every florist in America to be further talked about. All are as round as an apple, covered with buds.

Do you want to know why our Azaleas are good? Here is the pointer: We don't make a practice of selling them in the Fall, having the rubbish left for Easter, but plant them all as soon as unpacked into 6-7 in. pots, keep them cool and give

them the best attention for Easter sales. Those not having many buds are kept over for another year. For example: We import Bernard Andrea alba, Niebe and a few other varieties which do not carry good over their sea of year; this variety never fails to bloom in the second year.

KENTIA Forsteriana. Imported last Spring (1909) from Ghent, Belgium, in fine condition, 6-7 in. pots, 35-40-50 in. high, \$1.25, \$1.50, \$2.00, \$2.50 to \$3.00; 4 in. 20c. Belmoreana, 6-in., \$1.25-\$1.50 each; 4-in., 25c.; 3 in., 10c.

NOTICE: LILY BULBS of the larger size (9-10 in.) were very scarce to obtain last Fall owing to the wet weather in Japan; not even 20 per cent. could be supplied. But our grower in Japan, knowing well our position, has taken good care of us, and we were one of the few fortunate to receive 5000 of 9-10 in. bulbs from him—our full order of last Spring.

EASTER LILIES. Japan Multiflorum, of our own importation, raised from special selected amount of other stock should accompany all orders for Lilies. This year I can say we have the finest lot, free of disease, we have had for years past. The large demand for Lilies exceeds the supply every year; we, therefore, ask that you order early. Price, plants with five buds and upwards, 10c. per bud; plants with under five buds, 12c. per bud. We can satisfy all wants if ordered soon.

Owing to the small profit in the growing of Easter Lilies, an order for a reasonable amount of other stock should accompany all orders for Lilies.

CINERARIA Hybrida. We have a house full, 125 ft. by 21 ft. of the choicest colors—Henry F. Michell Co.'s best strain, just right for Easter. 6, 5 1/2 to 6 in. pots, medium height, 20c., 25c., 35c., 50c., 75c. to \$1.00. Just right for Easter sales. Some are in bloom now for immediate sale, if you wish.

BEGONIA, New Improved Erfordii. Always in bloom, Summer and Winter; 4-in. pots, very strong, \$2.00 per doz.; 6 1/2-in., in bloom and bud, 25c., \$3.00 per doz.

PRIMULA Obconica. 5 1/2-in. pots in bloom, \$2.00 to \$2.50 per doz.

FERNS for dishes, 2 1/2-in. pot, \$5.00 per 100.

Have some white Azalea Deutsche Perle and Vervaeana now in bloom if wanted, at 75c. and \$1.00 each.

Hyacinths. Raised from first-class bulbs of our own importation. These Hyacinths cannot be compared with ordinary stuff raised from cheap bulbs floating the market. King of the Blues (dark blue), Grand Maitre (lavender blue), Gertrude (pink), and La Grandesse (white). 4-in. pots, \$12.00 per 100.

TOURNESOL TULIPS. Red or yellow variegated. This is the best selling double Tulip in the market. Will sell in bloom in good condition ten days. Three bulbs in one 4-in. pot, \$1.10 dozen pots or \$12.00 per 100 pots. Murillo Tulips, best double pink, 3 bulbs in a 4-in. pot, \$1.75 per doz. pots.

Double Von Sion NARCISSEUS. The best yellow Narcissus in the market, sells at sight; three double nosed bulbs planted in one 5, 5 1/2 to 6-in. pots. Price, \$2.00, \$2.50, \$3.00 per dozen pots.

POMOEIA Nictiflora. Best pure white Moon-view in market, very fragrant and as big as a saucer. On this variety we have a world-wide reputation as growers and shippers for the last twenty years. Price, 2 1/2-in. pots, \$5.00 per 100. 10,000 are now ready.

CINERARIA Hybrida Grandiflora. 5-in. 20c.; 6-in., \$3.00, \$4.00, \$5.00 per doz. 460 right for Easter.

COCOS Weddelliana, 3-in., 15c.

BEGONIA Flambeau. Sells at sight, 4-in. pots, 20c.; 6 1/2-in. pots, 25c.

FICUS Elastica or Rubber Plant. Home-grown and Belgium stock, 5 to 6 1/2-in. 25c.

LATANIA Borbonica. 4-in. pots, 20c.

HYDRANGEA Otakan. Already forced, in bud, just right for Easter, 6 to 7-in. pots, 35c., 40c., 60c., 75c., \$1.00 to \$1.50 each.

SPIRAEA Gladstone, 6 to 7-in. pots, large stuff, 60c., 75c. to \$1.00 each.

FERNS, Todeaoides and Whitmani, 6-7 in. pots, 50c., 75c. to \$1.00; 5 to 6 1/2 in., 35c., 40c.

Denver, Col.

Floral contributions worth \$1200 surrounded the body of Mrs. Anna M. Benson, wife of N. A. Benson, a South Denver greenhouse proprietor, at the funeral yesterday afternoon at the chapel of W. P. Horan, 1527 Cleveland place. It took two carriages to carry the flowers to Fairmount cemetery. The chapel was taxed to its capacity with friends of Mrs. Benson. Members of the Pleiades circle of the Rebecca lodge, of which Mrs. Benson was a member, were in attendance. The pallbearers were selected from the Odd Fellows Lodge.

Greenhouse Boiler Explosion

Early in the morning of February 11 the boilers of the Brinkman greenhouse at Garrett, Ind., exploded, and as a result Harry Brinkman lies at a hospital in a critical condition. At the time of the explosion, the young man had gone to the engine room for the purpose of stoking the fire, and the rest is only a matter of conjecture. The report was heard, and members of the family hastened to the scene, only to find the building in a mass of flames, and the unfortunate young man in an unconscious state. The ambulance was immediately called and the sufferer removed to the hospital, where attending physicians found that he was suffering from a fracture of the right leg and the dislocation of the knee cap on the left limb, aside from many cuts and bruises occasioned by the flying glass that was wrecked by the explosion.

SOUTHPORT, CONN.—E. B. Jennings, the florist, is still a very sick man, but his condition shows signs of improvement.

F. E.—The Best Advertising Medium.

St. Louis

A. Y. Ellison has left the park department and has taken a position in the City Forester's office. Charlie Stocke, who was foreman for the late Michel Plant & Bulb Co., is also with the City Forester.

Walter Retzer, who last was in the employ of the Plant Seed Co., left with his family recently and is now located in Brownsville, Tex., where he will take up farming. His many friends in the trade here wish him good luck in his new venture.

Foster Floral Co., Grimm & Gorley, the Riessen Floral Co. and other downtown florists, say they did a large business in Violets and others cut flowers for St. Valentine's Day.

Henry Ostertag of Ostertag Bros. reports that he had several large decorative jobs in the Armory for the automobile show last week, also that store trade since Lent has been good.

F. W. Ude and Wm. Winter, two of the largest growers in Kirkwood, are sending in this market a lot of extra fine Carnations and California Violets. H. G. Berning handles the output of these two establishments.

Among the uptown florists, especially those in the fashionable district, Fred C. Weber, Ellison Floral Co., Ayers & Walbert, had an exceptionally fine St. Valentine's Day trade. Violets were most in demand and these were plentiful.

Geo. B. Windler, F. W. Bruning and E. H. Michel were the florists from here who attended the Illinois State Florists' Ass'n meeting last week at Urbana, Ill. They report a good trade.

Carl Beyer, who was reported sick recently, was out again last week and attending to business. John Cannon and John Barnard are also reported out and well again.

The Ladies' Home Circle held their monthly meeting last Monday, Feb. 13, in the parlors of the Washington Hotel. The meeting was called to order by Mrs. Steidle, the president, who called on Mrs. Benke to start the fun with a game of flowers. After handing each lady a slip of paper with questions on, the members were requested to answer in the name of a flower, for which she offered two prizes—first and second. After laboring with the questions for an hour or so, the contest closed; Miss M. Meinhardt won the first prize and Mrs. J. L. Koenig, the second. There were eleven members present. After the meeting a lunch was served. The next meeting of the Circle will be March 14 when Miss Meinhardt will give something interesting to the ladies.

The Executive Board of the St. Louis Hort. Society held a meeting at the Missouri Athletic Club, Tuesday, Feb. 15; Chairman Nicholson presided. The board decided not to hold a Spring flower show but are working on a Fall show on a large scale. ST. PATRICK.

Leominster, Mass.

Jos. Fuller, 31 Orchard st., has over 60,000 sq. ft. of glass and grows everything which can be sold in his two retail stores, one in Fitchburg and the other at the greenhouses on Orchard st. Mr. Fuller has been here some 18 years and has always been connected with the trade. One of his ranges is on Nelson st., in charge of Jno. B. Sargent as foreman.

Perley P. Lyons, 82 Pleasant st., is well located near Leominster center, and has enjoyed a good run of funeral work. Mr. Lyons has nearly 5000 ft. of glass devoted to mixed stock, but he is specializing in Carnations.

Leominster has about 16,500 population, and is quite a manufacturing town. A recent fire in the local carriage factory has thrown a large number of hands out of work, which helps to keep business down to some extent. The cut flower trade is excellent, the demand much better than for blooming plants.

ATLANTIC, IA.—Eric Frandsen, for some years connected with a florist's establishment here has gone into business for himself at Independence, Mo.

OCEAN HEIGHT, N. J.—Mrs. M. S. Fleming, who has greenhouses here, has opened a retail store, to be conducted under the title The Ocean Height Flower Shop, at 1315 Pacific ave.

LOCKLAND, O.—The Bloomhurst Floral Co. has been incorporated with a capital of \$30,000. John Mueller, J. G. Heber, F. M. Backmier, Jr., Wm. Sunderbruch and C. N. Skillman are incorporators.

OXYDENDRUM ARBOREUM

A Hardy Rival of the Croton

I HAVE 10,000 of this valuable American Tree-Shrub, and do not hesitate to recommend it as one of the best of our American natives. It can be used singly as a specimen tree or shrub, or massed in the shrubbery with equally good effect. It is also useful as a deciduous hedge, rivaling the Croton hedges of the South for wealth of color. But unlike the Croton, it is perfectly hardy here. 1 to 2 feet, per 10, \$1.25; per 100, \$9.00. 2 to 3 feet, per 10, 2.75; per 100, 25.00. 3 to 4 feet, per 10, 7.50; per 100, 50.00

Best 100 light pink—**Mrs. C. W. Ward.** Best 100 white—**Alma Ward.**

Special Sweepstake Prize for best vase of any color—**Alma Ward.**

MRS. C. W. WARD

MRS. C. W. WARD is a perfectly formed flower with full center; color deep pink, several shades lighter than Lawson, deeper than Winsor; having strong, erect stems, 24" to 36" in length. A vigorous, healthy grower, and has never shown disease of any kind.

A very early and free bloomer, producing fine flowers as early as September 1, which bring from twenty-five to fifty per cent. more than any other variety on the market.

Rooted Cuttings, \$2.00 per 12, \$12.00 per 100, \$100.00 per 1000.

25 at the 100 rate. 250 at the 1000 rate.

DELIVERY FEBRUARY 21st

ALMA WARD

This beautiful Carnation is pure white, except during dark weather, when it shows delicate splashes of pink similar to the Cattleya, increasing its popularity.

ALMA WARD is the largest, most fragrant Carnation ever grown, producing perfect flowers $3\frac{1}{2}$ " to $4\frac{1}{2}$ " in diameter, on strong, erect stems, 36" to 42" in length.

Rooted Cuttings, \$3.00 per 12, \$5.00 per 25, \$9.00 per 50, \$15.00 per 100, \$35.00 per 250, \$65.00 per 500, \$120.00 per 1000.

DELIVERY MARCH 1st.

"Canary Bird" THE BEST YELLOW CARNATION EVER INTRODUCED

EARLY—FREE—LARGE

Rooted Cuttings Ready Now, per 100 \$12.00, per 1000 \$100.00

Henry Schrade

Saratoga Springs, N. Y.

Scranton Florist Supply Co.

Scranton, Pa.

Westerly, R. I., Feb. 12, 1910

HENRY SCHRADER,

Saratoga Springs, N. Y.

Dear Sir:—We received the cuttings of "Canary Bird" this day in good condition, and are also well pleased with the appearance of the blooms you sent us of this variety. In fact, we would like to increase our order, as this carnation looks very good and we would like to grow a fair batch for trial next season. The blooms which you sent us are at this writing in good condition, they having expanded considerable and it shows to be a good keeper. Can you ship us at an early date an additional quantity of cuttings?

An early reply would be appreciated.

Yours very truly,

L. J. REUTER.

THE AMERICAN CARNATION

Price, \$3.50 ♀ ♀
Send for Sample Pages

A. T. DE LA MARE PRINTING & PUBLISHING CO. Ltd. 2 to 4 Nassau Street, New York

Pittsburgh

Trade conditions have changed but little the past few weeks. Even though the weather was rather unfavorable stock seems to be abundant, and moves at fair prices. Carnations are in their prime at about 3c. for good stock. Roses are also of fair quality; Killarney seems the favorite. Valley is cut by thousands; C. Koenig of Millvale is growing it in great quantities, very successfully. In bulb stock, Tulips take the lead, but prices are rather low. St. Valentine's Day trade was rather good; Violets were mostly called for. Plant trade is very unsatisfactory; the weather conditions are much to blame for this.

During the cold spell a week ago several shipments of plants from the East arrived in bad shape, almost all of them badly frozen, somewhat due to the packing. Some cut flowers also arrived in frozen condition. A small consignment of Orchid flowers were entirely ruined.

The heavy snows the past few weeks did not do much harm to greenhouses, but have delayed outdoor work, particularly in hotbeds.

Visitors of late were Arnold Ringier, of W. W. Barnard Co., Chicago; P. Berkowitz, of Bayersdorfer & Co.; Rice & Co.'s representative, of Philadelphia, and several bulb agents.

Next week, Tuesday, March 1, is the date for the monthly meeting of the Florists' Club. The subject of the evening will be bulbous flowers and plants, and other seasonable stock. The finance committee which had charge of the fund for the entertainment of the American Carnation Society meeting in January will make a final report, and the auditing committee of the Club will also make its report. The private gardeners will compete with the following plants: Two best plants Gardenias in bloom, 6" pots; 6 pots, 6", forced bulbs, 6 varieties; 3 pans, 7", each of Hyacinths and Tulips.

E. C. REINEMAN.

Rochester, N. Y.

The condition of trade has not improved, in fact if anything it is worse than last week, and the prospects are such at present that little hope is held of any improvement till Lent is pretty well over.

Carnations are still a glut on the market and impossible to move at anything like satisfactory prices. The same may be said of bulbous stock. We usually expect trade to fall off in Lent; but the decline seems to be much greater this year than previous years. The continued cold weather may be one of the principal causes; other than this we cannot account for it, and it is safe to say February business will be a disappointment to many this year.

The regular monthly meeting of the Florists' Association was held February 14. In the absence of F. W. Vick, the president, also Vice-President E. P. Wilson, Charles H. Vick acted as temporary chairman. The principal business of the evening was the election of three trustees, and the following were elected to hold office for the coming year: Charles Suhr, F. R. Schlegel, J. O. Pridmore. The report of the banquet committee was left over till a future meeting, owing to the absence of the president.

Bowling

The enthusiasm in bowling still keeps apace; about 20 members assembled Thursday evening and much improvement was noticeable. Four alleys were in use and this met with the approbation of all present, as the games went much faster and the rivalry between the two sides was very keen. Roman Irwin of Philadelphia was a guest of the Bowling Club and did some remarkably good bowling, rolling near the 200 mark for two games. Special mention is made of the remarkable score of Chas. H. Vick, he rolling 259 in the second game. The following are the scores for the evening:

W. Salmon	139	127	3
A. F. Vick	143	148	153
A. W. Darling	89	93	126
L. A. Tickner	105	89	126
C. H. Vick	94	99	87
H. B. Vick	157	259	128
P. H. Crippan	80	114	82

St. Paul, Minn.

The regular monthly meeting of the State Florists' Association was held Tuesday evening, February 15. Owing to the stormy night the attendance was curtailed somewhat, still there were 23 present, and an interesting meeting was held. Mr. Ruedlinger, of the entertainment committee, reported receipts from the sale of tickets to the annual dance \$167, expenses \$174.25, the deficit having been made up by the Minneapolis florists. The State Fair committee, through Mr. Nagel, reported progress. A communication relative to pot making was received from the superintendent of the Minneapolis Workhouse. Pres. Wirth, who had the matter in charge, was requested to ask for samples of pots. There were ten applications for membership from St. Paul read, and the applicants elected to membership. Minneapolis having pledged the largest guarantee fund it was decided to hold the first annual flower show under the auspices of the Association in that city next Fall. The guarantors, which body includes the prominent growers and retailers, are to have the management of the show, while a committee of growers and retailers selected by the Association are to arrange the premium list. Louis Boeglen of the Minneapolis Park Greenhouses exhibited some very fine Cinerarias, which scored as follows: Cineraria stellata, 80 points; Cineraria stellata hybrida multiflora, 85 points. J. P. Jorgenson, of the Donaldson Co., read a very comprehensive and instructive paper on Rose grafting, illustrated with specimens of the right and wrong way of doing it. This paper will appear in a future issue of the EXCHANGE.

The second annual dance under the auspices of the Florists' Association was held in the Ark Auditorium, Minneapolis, February 7. There were 250 in attendance, and a most enjoyable time was had by all present. The hall is conveniently located. The floor was fine for dancing, the music excellent, the decorations exquisite, the lunch fine, etc.

Trade since the holidays has been very good, and continues fine during Lent. Roses are the scarce article, red ones especially being in short supply. St. Valentine's Day created a great demand for Violets, but for once the growers were on hand with the goods, and the supply was equal to the occasion.

The growers are all getting ready for an early Easter, and all promise the usual supply of good things.

Those of us who are so unfortunate as to be incorporated for business find an additional tax imposed upon us by the Federal law, as well as a lot of extra work to comply with its strict requirements.

Fred W. May, who has been connected with L. L. May & Co. for many years has severed his connection with that house to engage in the nursery business at North Yakima, Washington.

O. J. Olson is in Chicago and Milwaukee on a flying trip in the interests of his firm.

Mr. Van Zonneveld of Sassenheim, Holland; W. Greisinger, of Ghent; A. Currie, Jr., of Milwaukee, and G. A. Clausen, of Albert Lea were recent callers.

VERITAS.

New Seedling Rose

Radiance

A seedling from Cardinal, a brilliant rosy carmine with opaline tints in the open flower. The form is fine, large, with cupped petals, bud long, brilliant, radiant, with extra long stems, a constant bloomer, fragrant, foliage abundant and of splendid substance.

Forcing Strawberries

(53) **Forcing Strawberries.**—Will you please let me know through your valuable columns the best way to force Strawberries, the best varieties to force, temperature, and any other information of value? I have up-to-date houses here. Last August I layered about 300 runners in 3-in. pots; when they were well rooted I lifted them and placed them in frames until November, then I potted them up in 6" and 6" pots, giving a little bone meal, about one teaspoonful to each pot. I placed them on a center bench, in a temperature of 50° at night. When they began to move I ran them 5° hotter, and about the beginning of January they began to flower. I then ran the house at 60° at night; and at this time I rubbed some dried poultry manure through a fine sieve and gave each pot one teaspoonful. When the berries got about twice as big as peas they began to die away, though the plant looked fine. I looked after the watering myself and kept them from getting dry or too wet. The day temperature I kept at 75° on bright days and 65° on dull days. I don't know the varieties that I have been trying to force, as they were all planted when I came here and nobody knew what varieties they were. I have a good heavy soil here and get up-to-date Roses and Carnations.—X. Y. Z., Penna.

—I would advise you to start your plants earlier another season. It would be impossible to secure results on the lines followed. To start forcing any plants it is necessary that the pots should be filled with roots. However, the evil cannot be remedied now for this season, therefore I would advise the following plan for next season. Secure good, healthy runners in July; root them into 2" pots, and when rooted they may be taken somewhere near the greenhouse. Should there be cold frames at command they would make ideal quarters for the young plants for a few days. The object in setting them in frames is that at times they are benefited by keeping them a bit close for a day or so; also, they may be protected against heavy storms—but the frames should not be deep. When the young plants are ready for a shift repot into 4" pots; then, in the course of two or three weeks, if everything has gone well, they will be ready for another and final shift into 6" pots, after which they may be set outside in some sheltered spot where the plants will receive the full benefit of the sun from morning until night; having in mind to secure good strong crowns, and

thoroughly developed. Following up this method, by the time they have completed their growth in the Fall the pots will be full of roots, and before much frost occurs the pots may be plunged in soil to the rim of pot. Should there be cold frames available they may be plunged in cold frames, leaving off the sash until the plants have received several degrees of frost. Of course, when severe frost sets in they would have to be protected. Strawberries will force much freer when the plants have been frozen somewhat. I would not recommend bringing the first batch into heat much before the first of January, as when this is attempted too early oftentimes they are a partial failure. They may be started in a temperature of 45° at night, 65° day, or 60° with sun heat. In a week or so raise to 50° at night, 60° to 65° day; this should carry them until they are set, when they may receive a temperature of 60° at night, or more if necessary, although a temperature of 60° is all right. This allows anyone to give air on bright days which will certainly improve the flavor of the berries. Strawberries will do much better with a fair circulation of air when ripening up their fruit. Also, better results will be obtained if the fruit is grown near the glass, on hanging shelves; in such a position they will receive more air than when growing on the bench. Strawberries are not particular as to soil, still a fairly heavy soil is to be recommended. Soil that is adapted for growing Roses or Carnations is all right for Strawberries, mixed, say one part thoroughly decayed manure to three parts soil, with a sprinkling of bone meal for the final potting. The berries, after the crop is set, will take a fair amount of feeding. Ichthemic Guano, Clay's Fertilizer, or even nitrate of soda will help to increase the size of the berries, but those manures mentioned are high grade and must be used cautiously. Good drainage is absolutely necessary, so when the plants are set into the 6" pots a fair amount of drainage should be supplied, with a light sprinkling of soot in the bottom of each pot—it's a preventive against worms getting in the pots. Of the varieties for forcing purposes, Marshall is one of the best, if good strong plants can be grown. Unfortunately in some soils this variety absolutely refuses to grow, but where it can be grown it is undoubtedly one of the best, bearing large handsome fruit. Wm. Belt is also satisfactory. Nick Ohmer will probably produce the largest berries. Sharpless has been forced for many years, and still can be recommended. W. T.

Chrysanthemums

and Asters

Are our specialty,
we grow nothing else

Chrysanthemums the best for Florists' use,
either large or small flowering.

Asters we grow the best kinds for the Florists;
if painstaking counts our seed is of superior
quality, a trial order will convince.

Purchasers of stock from advts. in these columns will confer a favor by making this statement in their order: Saw your advt. in the Exchange.

Baltimore

A visit to Halliday Bros. is a treat just now. Thousands of Lilies in all stages are to be seen, and the plants are of such uniform growth and so healthy that one might doubt that failures are often the fault of the bulbs. They are the finest Lilies I ever saw. In Carnations, the Echantress and its various sports are grown. Rose pink Echantress was in full crop and showing a large percentage of splits, but strange to say Echantress and its white sport had but a small percentage.

H. J. Quick and John Cook had taken their better halves to the market to sell the goods they grow. What a blessing equal suffrage is! Mr. Quick is busy filling the order for a large number of Geranium plants for the seed firm of Bolgiano & Son. Mr. Cook is going to have a "fitten" to his new place this Spring.

Isaac Moss's place at Govanstown is in apple pie order, as always. The Carnations are good, but the Roses are the best quality possible. Mr. Moss does an extensive nursery business. If Mr. Moss can sell all his stock there will be another millionaire in Baltimore. F. C. Bauer, his neighbor, has a neat little place. His new Xmas begonia is fine while his Lily seedlings this year look to me below par.

M. Thau has a new crimson Carnation seedling called Lord Baltimore which he would like to sell. Who wants it?

J. J. Perry is not only a most capable manager of a wholesale establishment, but is an ideal president of a florists' club.

HENRY EICHHOLZ.

Mathias Thau of Govanstown, Md., has three promising new seedling Carnations. One he has called Lord Baltimore; this particular new seedling has been well tried for the past four years and has proved to be a good bread and butter Carnation. It is of dark crimson color, and the flowers average 2 1/2 to 3 in., the stems 30 in. It is a clean and healthy grower, with solid calyx which does not split. The other Carnation is a pink seedling Lawson X Echantress, bearing flowers 3 and 4 in., and grown the first year. The third is a white seedling, grown the second year, with stems 24 in. long; it is a free bloomer and does not split.

A most appropriate window display for St. Valentine's Day was seen at Seidewitz's, 323 N. Charles st. The window, a single plate 16x9 1/2 ft., made a wonderful show of itself. A garden bench, backed by Palms and large specimen Ferns, and the ground work an imitation of a lawn, the borders of which were planted to Primroses, Azaleas, Daisies, intermingled with Cyclamens and Ferns, gave a fine effect to the setting. The bench was in a conspicuous spot, and upon it a box of candy and flowers were placed, besides a copy of The Smart Set magazine. Along the side, resting against the bench, was a white parasol and a bag of golf clubs, while a bull dog of a rather impressive color watched over the same. Upon the back of the bench Cupid was sitting in contemplation. A large heart of pink and white Carnations, suspended from the ceiling, was drawn by seven white doves harnessed to the heart by narrow white ribbon. E. W. Pierce, the manager of this establishment, was the decorator.

John A. Ritter, florist, 1918 North Charles st., parted with 50c. recently, through a hard luck tale. A stranger dressed in the garb of a countryman appeared in his place and told him of the death of his wife. The bereaved one mentioned that he had left home without taking any money with him, and asked for the loan of 50c. Mr. Ritter was also told that the stranger's daughter would come later in day to get \$10 worth of flowers which he ordered. To make sure of this fact, he wrote a note to his daughter to be given to her when she arrived. Having gotten the money, the stranger departed. Mr. Ritter is still looking for the daughter.

The Flower Garden, Geo. F. Lurssen proprietor, 834 W. Baltimore st., is an old establishment which was started in 1881 by Thomas Vincent and conducted by him up to several years ago, doing a successful business. The establishment consists of an ideal store, well located, very large and nicely fitted out in an up-to-date manner, showing the stock to good advantage. In the rear is a large conservatory containing many decorative plants of all descriptions. At the time Mr. Lurssen took hold of the business he knew very little, but by his hard and suc-

cessful efforts he has made a business well worthy of mention.

The Ladies' Bowling Team met at the Garage last Wednesday, February 16, and made some good scores, as follows:

Mrs. Boone	131	75	121
Mrs. Bauer	134	94	123
Mrs. Seybold	109	78	69
Mrs. Perry	64	106	71
Mrs. Kline	101	82	87

Mrs. Bauer scored 141 in one individual game.

The ladies meet every Wednesday evening at the Garage, the team being composed of florists' wives. They have addressed the following open letter to their spouses:

To be Read with Expression

To the Gentlemen of The Gardeners and Florists' Club:

The lady bowlers ask you to start in the New Year with good generous heart, and give your wives, daughters and sisters, one evening a week off. In fact, to show your wife how much you really do love her, insist on her taking this evening, put a little change in her pocket-book, and send her down to the Garage to join us in our games. Now let us give a pointer, with which we know our husbands will agree, after you once let us "get the habit." Using our mighty arms swinging a ten-pin ball is better than using them to swing a frying pan or rolling pin on your precious geraniums, don't you think? How much better you will feel, too.

Now you "men of the soil, sit up and take notice." At the cost of only a few high-balls or mint-juleps you can save yourselves many a knock and enjoy a quiet evening at home, or at the Gent's theatre. Or, still better, accompany us. We can assure you that we'll certainly enjoy ourselves, and develop our muscles, and we can all become better acquainted with one another. Why shouldn't the wives of the trade know one another as well as the men? Send us down every Wednesday evening to the Garage at 8 p.m., and let us have a big jolly crowd—the more the merrier.

Your very truly,
Some of the Lady Bowlers.

The Market

Trade has kept up fairly well, considering it is Lent, as it always drops off to a certain extent at this season, but little complaint is heard. The market florists are again on the streets with their stalls filled with a large quantity of cut flowers. Washington's Birthday helped to move many cut flowers and a few decorations. Roses are a little steadier. Carnations are still plentiful and selling well; some are going to waste, however. Bulbous stock is getting steadier. Sweet Peas and Violets still come in heavily. Easter Lilies are about in the same condition. Greens of all kinds are in plenty to meet the demands.

Worcester, Mass.

Fred. E. Keyes has a combined store and greenhouses at 101 Highland st., erected some forty years ago by his father. Business is very good, especially in funeral work, and on Saturday last he supplied a large number of Daffodils in pots for the Daffodil sale of the "Levana Club." He has about 12,500 ft. of glass in general lines for retail trade. Mr. Keyes has been running the range about four years and since the death of his father.

A. A. Hixon & Son have some 5000 sq. ft. devoted to Geraniums, Violets and mixed stock. They erected one house last Summer in which they grow Violets. Mr. A. A. Hixon is secretary of the Worcester Co. Hort. Society and can always be found on duty at their building, 18 Front st. Business is coming along nicely and plans are made for more glass in a short time.

Albert H. Lange has leased a large commodious store nearer the center of the city, for the business of the estate of the late H. P. A. Lange. Possession cannot be obtained before December. The new store will be several times larger than the old one. One advantage will be two large show windows and we hope to see some very handsome floral window displays such as we read about in The Florists' Exchange. The rent of the new store is said to be about \$3700 a year, and this is considered reasonable for the locality.

There has been a continuation of heavy funeral work during the past week. There is not as much work among the French people as the priests here will not allow the flowers to be brought in the church.

Valentine's Day brought its usual run of business. None of the florists made any special display, but all had a fair amount of business. CABOLUS.

Cincinnati

Lent is certainly cutting quite a figure this season in business. Violets are at a standstill. Sales of Am. Beauty Roses one has to force. The only stock that is cleaning up daily is Ten Roses, and if there was anything like a heavy cut coming in the market would be glutted with them. Funeral work is about all that is keeping business moving. A year or so ago we thought that Lent did not cut any figure with the business, but we have changed our minds. The heavy snow storms that we have had in this vicinity has also had quite a depressing effect on business of all kinds.

Jos. R. Goldman of Middletown, O., reports that one end of his greenhouse went in from the weight of snow; and I understand Bentley's greenhouses at New Castle, Ind., had quite a loss from the same trouble. Wm. Speck of Newport, Ky., also had some damage from the same cause, and I presume that a great many others have been getting it the same way, for with the snow fall from 10 to 12 inches coming rapidly, and at night, it was simply impossible to guard against it. There is nothing of any special importance to report this week, only that the automobile show is on, which may use up a little stock.

E. G. GILLET.

Kalamazoo, Mich.

St. Valentine's Day brought a goodly amount of trade, and this day seems to be on the way to becoming one of the important ones between Christmas and Easter, though, of course, no increased values are made on stock. Violets, red Carnations, Forget-me-nots and Sweet Peas are mostly called for, as well as a considerable number of small plants in flower.

Transient business and funeral work still make good calls on the retailer, so that, as yet, the beginning of Lent has not affected trade. The weather, though continuing cold, has not been stormy this month, which has helped stock along in the greenhouses, and with Easter now only a few weeks away the condition of the Lilies is a topic of interest. Van Bochove expects to have a large block just about right as well as plenty of pot plants for that time. W. Thomas is another who expects to be in good supply also. Fred Marker and Carnations Fraser will have good cuts of Lilies and Lilies as well. The rest of us will probably be cutting Roses, and Carnations also, in good quantities by that time, so it looks to me just now we shall be able to care for all the business, wholesale and retail that comes our way. With bright and cheerful weather a big business is to be expected.

Those florists who expect to build this season will pay quite an increased price for their glass, as late quotations show a jump of 80c. per box over that of last year, probably the result of the tariff's revision downward.

S. B.

Catalogs Received

JOHN D. IMLAY, Zanesville, O.—A Catalog of Seeds and Plants under the title "A Few Choice Seeds and Plants, 1910." The publication contains 32 pages descriptive of Vegetable and Flower Seeds, Roots, Bedding Plants, Shrubs, Vines, Roses, and Perennials. Illustrated.

SCHLEGEL & FOTTLER CO., Boston, Mass.—Catalog, for 1910, of Vegetable and Flower Seeds, Farm and Miscellaneous Seeds, Grass Seeds, Summer Flowering Bulbs, Tuberous Roots, Aqua-

tics, Foliage and Flowering Plants, Hardy Perennials, Climbing Plants and Vines, Roses, Shrubs and Trees, etc. This is a 108 page publication, gotten up in good style and well illustrated. The covers are ornamented with half tone designs, on the front page Sweet Peas, on the rear page a Bean specialty. The flower seed novelties and specialties for 1910 include a line of new Asters; the latest novelties in Sweet Peas; the new Gerbera Hybrid; Dimorphotheca aurantiaca; Delphiniums; Myosotis Ruth Fischer; Salvia splendens pyramidalis; a new myrtle-leaved Smilax; Well's new Penstemon, which throws flower spikes 18 ins. long, individual flowers 2 ins. across; and Boston Giant, a new Sweet William bearing individual flowers the size of a half dollar. The vegetable specialties are numerous and include several of the company's own introduction. Supplementary to the catalog is issued a 48 page Wholesale Price List, in pocket form.

THE MORRIS NURSERY CO., 1 Madison Ave., New York City, with Nurseries at West Chester, Pa.—Descriptive Catalog of Choice Hardy Trees, Vines, Shrubs, Evergreens, Roses, Perennials, Fruits, etc. This is a 72 page publication, printed on good paper stock, and profusely illustrated. The covers carry some fine half tone illustrations of lawn and border planting. The business of the Morris Nursery Co., as noted in the introductory remarks, was established in 1849 by Paschall Morris, from whom it receives its name. Mr. Morris was succeeded by J. L. Darlington & Co., who conducted it until 1866, when it was purchased by Otto & Achelis and continued until 1875, when George Achelis assumed sole ownership. In 1906 a corporation was formed and the business carried on under the present corporate name, with the following officers: George Achelis, president and treasurer; Peter A. Keene, vice-president; M. G. Lear, secretary. Mr. Keene has been engaged in the nursery business for over thirty years and has charge of the New York office. The nurseries at West Chester, Pa., are admirably suited, both in climate and soil, for the production of nursery stock. West Chester is 117 miles west of New York City, and 27 miles west of Philadelphia, and is reached by two branches of the Pennsylvania Railroad and by trolley from Philadelphia. The line of stock catalogued is unusually extensive and embraces about everything ordinarily called for, as well as many rarities.

All the Clay for our Florists' Red Pots

The Week's Work

BY

FRITZ BAHR

Easter Preparations

Proper Care of the Bulb Stock

The bulb stock plays an important part among the Easter plants, with most of us. Hyacinths, Tulips, and Daffodils, in dishes and pans, are usually in great demand, not alone when something inexpensive is wanted, for 12 inch pans of good stock can be disposed of frequently at good prices. Of course, all depends on how well grown the stock is. For the retailer in the city, who has no cool place at command, bulb stock quite often is unprofitable if we have bright and warm days around Easter; but for the retail grower, it pays to create facilities so that he can handle his stock properly, and without it he runs big chances, such as he has no right to do. A deep cold-frame is ideal for holding back or finishing bulb stock. By proper protection stock can be kept almost at a standstill for over a week, and be removed, if necessary to warmer quarters at any time. Whenever Easter comes at an early date it is always best not to figure too close in regard to bringing the bulbs into bloom. When wanted for cut flowers a little forcing went hurt as much as is the case when the plants are to be used for the filling of pots and dishes—a short stocky growth is wanted for this latter purpose, so as to produce a stem which will hold the flowers erect without other support. To have stakes in a dish of Daffodils to hold them up doesn't add in the least to the appearance of the dish; and there is no reason why well grown stock should have them. The grower should not overlook the fact that different treatment is required for the stock intended for cut flowers from that intended for pots.

Narcissus and Hyacinths

For Perfect Flowers Let Them Come Along Slowly

One can bring Narcissus, both double and single, into bloom in less than three weeks at this time of the year. Two weeks even will be sufficient when enough heat can be had—it all depends upon that. While this is one way of forcing, it will never do for stock which is intended for the filling of dishes, the slower you bring such stock along the better, the stiffer the stems and the finer the flowers. Miniature Hyacinths do not differ in this respect. To have them in the peak of their beauty for Easter week, and pre-empting the market, for if left there, bringing them in by the end of the month—the 26th will not be too soon—and give them a Violet house temperature, or a night temperature of not over 45°. If frozen keep them below the benches for two or three days. Remove all soil which clings between the plants above the edge of the dish, for if left there it will only help to make a weak stem. A light, sunny bench is the proper place. Keep, by proper ventilation, the temperature down as much as possible during the daytime—the less shade the better. It may seem at times that the stems will be too short, this, however, never happens if healthy well rooted stock is at hand; even if short when the flowers begin to open, before they are fully developed the stems will be long enough, and there is far more danger in getting them too long. Should there be an unusual lot of dark, cold weather, it may be necessary to bring them into a higher temperature for a few days; on the other hand, if by March 10 the stock seems a little too far advanced, the cold frame is the proper place.

The Double and Single Tulips

Allow Plenty of Time for the Easter Stock.

While we wouldn't think of placing the Narcissus or Hyacinths intended for Easter in pots in too dark quarters for a few days after they have been brought in from the outside, we do so with the Tulips, both the single and the double varieties—just a few days, long enough to get about 5 inches of growth. Only last year we had to pay for not doing it. A number of boxes were brought to the top of a bench to bloom for Easter. They were Murillos, and some Crown of Gold. They bloomed all right, but on stems too short for any use, while those which were kept in a dark place for six days had 7 inch stems, just the right height for dishes. The single Tulips do not differ in this respect. To leave them too long in a dark place would render them useless for anything but cut flowers, so care should be taken to avoid this. The double Tulips require at least one week more time to get into bloom than the singles; nothing improves them more than a few days in a cold house

February 26, 1910

after their flowers are open; this will finish them, as far as coloring is concerned as well as size of flower. For dishes, the double varieties of Tulips head the list of all the bulb stock we have in bloom for Easter, but allow plenty of time for them to develop slowly, for only in that way can you expect the best results. Any of them can be brought in by the 26th of this month; it takes every day to get them in, and have them at their very best by March 27.

Lily of the Valley

Pot Plants Most Suitable for Easter

Easter is the great day to dispose of pots of Lily of the Valley—if they ever sell it is then—and while we have Valley with us all the year round now, it is still considered by many as the ideal Spring flower, and at no time of the year have we more success in bringing it into bloom, as far as perfect foliage and flowers are concerned. It is getting so near their natural flowering time now that, giving the plants sufficient time to develop slowly is of greater importance than a high temperature by bottom heat. It is over 20 years since the "Great Scott" told me the best Valley he ever forced for Easter were from a lot he potted up into 6's and placed on top of boards on the hot water return pipes, allowing almost one month from the time the pips went into the pots until all the flowers were open. For the grower who hasn't proper facilities for forcing Valley otherwise, the above method is still good today. By paying attention to the proper watering excellent results can be had that way. Get pips from the nearest firm, and allow 25 days; there isn't a simpler way to get them into bloom. Don't bunch the pips all in the center of the pot—by the way, 6 and 7 inch Azalea or half pots will do, and are even better than pots—have the pips evenly distributed, especially along the edges. Many pots of Valley can be sold during Easter week, and what are not sold can be made use of for cut flowers. Get busy!

The Lilies

A Few Timely Suggestions

Four more weeks to Easter, that is, if you count up to the day. The Lilies really should be ready one week earlier, and with many of us those six days mean a great deal, especially if we retail our own stock. Flowers which opened in a 90° house are not fit to be sent out, they should have at least four days in a Carnation house to finish them. It is hardly any use to dwell on how far the buds ought to be advanced by this time; even the beginner must realize that if they don't begin to turn their noses downward pretty soon the plants might as well be removed to a cooler house and let them come into bloom when ready. If there is a chance, by applying heat, to get the flowers in on time, it is certainly worth trying, for Easter is the day to sell the Lilies; but many good plants are yearly sacrificed through overforcing. If a high temperature is needed, look out for green fly, and attend to the watering properly. Neglect in that respect are liable to produce blind buds, or deformed ones. Overdoses of moisture, which will cause the roots to decay, have the same effect. Don't apply water of a temperature near the freezing point; some say it doesn't make any difference, but that is not reasonable. Are the plants staked up properly? The retail grower often needs long stemmed Lilies for church decorations and the taller the plants are for that purpose the better, but such need support to hold them up.

Pansies for Easter

Prepare a Stock for Made-up Dishes

While writing about Easter plants it is only proper that I should call attention to the Pansies. There are but few of our customers who don't admire them. Made-up dishes of them for Easter sell as well as anything we could offer for that day, and far more could be disposed of if we see but few displays. If you have Pansies in the cold frames for Spring sales, lift a few; the plants planted on a bench in a Carnation house temperature will start to bloom in a couple of weeks and can be put in dishes a few days before Easter. Should the soil be frozen in the frames it should not prevent the lifting; let them thaw out inside under some bench. I prefer these plants for Easter for the reason that they are short and stocky. If of any size at all they will make but little growth for the next few days, but rather bloom; eight to ten such plants used in filling a 7" or 8" dish will sell a dollar at Easter; that is just a little more than we get for them around May. The plants which have been indoors all Winter will also make good material, that is, if they have been grown cool. Long straggly plants are of no use, but if only such are to be had a pinching back at once will still make them suitable. Of course, the proper way is to prepare a good stock

of plants for that purpose, and have them in a frame where one can get at them at any time; this will also give a chance to have certain colors by themselves, which is also an advantage.

A Great Easter Plant

The Care of Primula Obconica From Now On

From now until Easter the Primula obconica plants are at their best. Whether large or small, every plant is loaded with flowers, and while a few of them are disposed of right along Easter is the day to move them in quantities. The larger plants will do for specimens and the smaller form the very best material for made-up dishes. The retail grower, only too often, has to call on the obconicas during the Winter months for flowers. What better material could he possibly get to take the place of white Carnations when short on them for decorations? What this is very well during January and February, from now on the plants intended for Easter should be let alone, except as regards removing the old flowers. The right way is to select a certain number of plants, such as will bloom yet for some time and set them aside; by so doing it won't hurt to remove the old flower stems and bad foliage. If you have material of some sort to plunge the pots into up to their rims, so much the better. The plants like a hot sunny position, but their roots need to be cool and moist. Dry pots mean loss of flowers—look out for that. If the plants are pot bound, a light dose of liquid cow manure will do them good. We find a great variety of colors among the ones in bloom, but for made-up dishes the safest way is to be particular to get flowers of one color for each dish. Pansies, no matter how you mix the colors, in a made-up dish always look well—they harmonize; but not so with the obconicas, and if you get a few of the purple shades of pink throw them away rather than spoil a half dozen dishes.

The Cannas

Getting Ready to Start the Dormant Stock

Most of the time in the last week was taken up by us in getting the first batch of Cannas started. Among others, we bought last May 1000 of the King Humbert. They were shipped from Philadelphia, 5 in a bundle. The plants had been grown in sand, from small eyes. They had all of them good roots, about 6 inches long, and were packed in Sphagnum moss. We planted them right out into the field, in a sandy well manured loam. The only watering they received from the hose was right after they were planted. We felt very much like entering a strong kick, as we had expected plants from pots; but as the stock looked so exceptionally fine we didn't complain. These plants were not allowed to flower during the Summer months; as soon as a flower stem appeared it was pulled out. The plants were lifted October 26, and stored under a Carnation bench. The roots at one end of the house, where some return hot water pipes are located, began to show activity. That meant either the removing and potting up of the started eyes, or loss of a number of plants. So we overhauled them all, and every started growth was carefully removed. Any showing leaves all ready developed were potted into 3" pots, the others into flats, keeping the different sizes by themselves. They were placed on the return pipes for a few days, until root action was well established, when the top of the bench in a 55° house was the place for them. Now, plants which are potted up will perish in a house of less than 60°. What they ought to have is a little bottom heat, and to be kept away from the bright sun for a few days. When it comes to some of the less expensive varieties of Cannas, of which we have a large stock on hand, it hardly pays to bother with any of the growth made below the benches; but a variety such as King Humbert is too valuable as yet to lose, or waste anything that might make a plant. Shoots which have made leaves under the bench, if not too long or spindly, will grow into good stock, but they need a little nursing for a few days, otherwise they might as well be thrown away. The retail grower won't make any mistake by having a few extra strong Humbert Cannas in 6" pots in bloom by May. The others, in 3½" and 4" pots, the right size for bedding, will sell much better when a customer can see the wonderful flowers when ordering, which are exceptionally fine when they have a chance to develop under glass. This holds good also of any of the other sorts. Have a few in bloom, so that a customer will get a better idea of them, and you will find it so much easier to take orders.

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

EASTER PLANTS

AZALEAS, 5½ to 8-in. pots, from 75c. to \$6.00 each, larger plants from \$6.00 to \$10.00 each, Pyramids \$4.00 and \$6.00 each.
Chas. Bancke, dwarf, in 4½ and 5-in. pots, \$4.00, \$5.00 and \$6.00 a doz.
Firefly, 4½ and 5-in. pots, \$4.00, \$5.00 and \$6.00 a doz.
LILIES, \$12.00 per 100 buds; \$120.00 per 1000, \$550.00 per 6000.
LILACS, White and Blue, 8 and 9-in. pots, \$1.50, \$2.00, \$2.50 and \$3.00 each.
SPIRAEA, Gladstone, White, \$6.00, \$9.00 and \$12.00 a doz.
Queen Alexandra, Pink, 75c., \$1.00 and \$1.25 each.
HYACINTHS, Single, pots \$2.00 per doz. Only extra selected bulbs grown.
Miniature, 6, 7 and 8-in. pans, 35c., 50c., 75c. and \$1.00 a pan.
TRUMPET NARCISSUS, 35c., 50c., 75c. and \$1.00 a pan.
LILY OF THE VALLEY, in 5-in. pots, 35c. each; 6-in. pans, 50c. each; 7 in. pans, 75c. each and 8 in. pans, \$1.00 each.

DWARF ROSES, Baby Dorothy, Baby Ramblers, \$6.00, \$9.00 and \$12.00 a doz.

ROSE, Mme. Cutbush, Enchantress pink, large plants, 6½ and 7-in. pots, \$12.00, \$15.00 and \$18.00 a doz. Standards, 2 ft. high, \$12.00 a doz.

Large showy plants of Dorothy Perkins, shell pink, 6½ to 9-in. pots, \$1.50 to \$7.00 each.

ROSE, Tausendschoen, Large semi-double, shell pink, 6½ in. pots, \$1.00 to \$2.00 each; 8-in., large, well budded, \$5.00 each.

Star-Flowered Rambler, single, large trusses, outside petals light pink, centre white, 6½-in. pots, \$1.50 and \$2.00 each; large plants in 7 to 9-in. pots, \$3.00 to \$7.00 each.

Wedding Bells, Pink, single, \$1.50 ea.
Everblooming Crimson Rambler, (Flower of Fairfield). Brilliant red color, 6½, 7, 8 and 9-in. pots, \$2.00 to \$5 each.

All the foregoing Roses are timed for Easter and are perfectly budded.

With shipping orders, please add to the amount of bill 75c. for each ten dollars worth of goods, to cover the expense of cases and packing.

For other varieties of foliage and Easter plants, write for price lists.

Please mention the Exchange when writing.

NEW YORK, February 23.—No improvement is noticed in the condition of the cut flower market as it existed a week ago. All kinds of flowers are very plentiful and price hardly enters into the question of sales as buyers are able to secure flowers at practically their own figure. It is not a question of quality but quantity, and the light demand for all grades of flowers has made a general clean up well nigh impossible. American Beauty Roses are about the only flowers in which any activity is manifest, top grades of them reaching 50c. A few sales of these roses have been made at 60c. but they have no bearing on the general market. Tea Roses of every description are very plentiful, and best grades are hard to move. Short stemmed grades move a little more readily, but there are plenty to go round.

Carnations are so plentiful that one wholesaler cleaned out good, bad and indifferent stock at 50c. per 100. This price is perhaps, the lowest, but it is indicative of the condition on the street, and many other wholesalers would do likewise if opportunity offered. Carnations have to be exceptionally good to realize \$2.00 per 100.

Cattleya Mossia is now coming in, but the demand for Orchid flowers is very light, so that quotations of last week would apply to the conditions existing now. Gardenias, Lilacs, Lily of the Valley and Sweet Peas are in abundance, all of which are selling at prices consistent with quality, where sales are possible. Tulips, Freesias and Daffodils are a source of worry, as they accumulate rapidly with no existing outlet for them; all varieties suffer alike. Lilac, Stocks, Callas and other such material move slowly. Asparagus and Smilax move moderately well. Violets are mostly secured by the street men, who buy the majority of the flowers at 30c. to 40c. per 100.

CHICAGO, February 22.—For the Lenten season, the market has kept up fairly well, and even with the stock of Roses much greater than for many weeks, there is a good demand for all varieties and grades, at prices practically unchanged. American Beauty Roses are of better color, and begin to look like the real thing. Killarney is also much improved, but of all Roses are the scarcest. Good Killarneys bring \$12 to \$15 per 100, with Bride and Bridesmaid commanding \$8 per 100 for best stock; other varieties are about as quoted.

Carnations are holding their own, and with plenty of good stock \$3 per 100 for best is easily obtained, ranging down to \$1.50. The demand for Harrisii Lilies is very active, and flowers are easily disposed of at \$12 to \$15 per 100. Callas have taken a drop, however, and \$12 per 100 is asked for fancy stock. Lily of the Valley is plentiful, with the demand not quite so great; prices still hold at \$3 to \$5 per 100. Bulbous stock has taken a back seat, the demand falling off considerably in the past week. This is especially noticeable in white, yellow in all bulbous flowers having preference. Sweet Peas are showing up in greater quantities, although there are many short stemmed ones among them; 75c. to \$1 per 100 are the prices obtained. Daisies are to be had, but not in any great quantity, at \$1 per 100. Candytuft, Freesias and Roman Hyacinths move slowly. Paperwhites are not so plentiful, but still quoted at \$3 per 100.

Orchids are getting scarcer, and already the supply for Easter looks as if it may be short. Gardenias are in plenty for the demand. Green stock moves very satisfactorily. The market, taken altogether, is all and more than anticipated for this season, and all are well satisfied with the conditions.

PHILADELPHIA, February 21.—The cut flower market is in a very perturbed state, as are all other business enterprises in this city, due to the strike of the trolley men. Up to last Saturday morning orders were brisk, and plenty of stock of all cut flowers was on hand but the question of delivery since that time has so entered into the sales that all orders are taken without any special time limit, it being up to the wholesaler to get his goods to the retailers' establishments as soon as possible, with this handicap orders have dwindled away fully 50 per cent. The public mind is greatly agitated, and the only persons doing business are the street fakirs, who are certainly reaping a harvest from the pedestrians. The class of stock secured by them is mostly Carnations, and on account of so much of it being on hand many sales are reported at \$7.50 per 1000, any color; this will evidently be the largest outlet for the next few days, unless conditions change. All stock, from American Beauty Roses down to Violets, is plentiful enough for all purposes, and at present writing it is not so much a question of price, as of chance to sell, as material is accumulating rapidly. Top prices on all commodities are realized where possible, these being the same as last week, except Carnations, which have dropped.

Short stemmed Roses are in good demand, but not scarce, and no fancy prices are realized.

Bulbous stock of all varieties is very plentiful. Daffodils and Tulips are coming in large quantities and much stock is on hand in the ice boxes of all the wholesalers. Shipping orders are moving easily, but these do not relieve the situation to any great extent, and until the strike question is settled but little relief will be found in the cut flower market. Greenery of all kinds, especially cut sprays of Asparagus plumosus, is in good demand, and realizes 40c. to 50c. per bunch.

BOSTON, February 22.—Although there is quite a good supply of flowers, prices are holding fairly good and there isn't very much surplus this week. Roses are not over plentiful and prices hold firm. Long stemmed American Beauty are very scarce and bring fancy prices. White Killarney is getting a little more plentiful. Red Roses are scarce, therefore the prices are good. Bon Silene and Safrano in top grades are bringing fancy prices. Rose Mrs. Aaron Ward with 24 in. stems also brings fancy prices. My Maryland is arriving in small quantities. Richmond is quite scarce. Bride and Bridesmaid are not quite as popular, and move slower. Carnations are becoming quite plentiful and prices are inclined to fall. The quality of the flowers is good.

Bulbous material is quite plentiful. Some fine Emperor and Empress and Golden Spurr are seen. Tulips are plentiful, LaReine and Yellow Prince are in abundance. Lilies are plentiful, many of them of the Formosa type. Lily of the Valley is abundant. Pansies are in good supply, selling well. Forget-me-nots are plentiful and good grades sell well. Mignonette of high grade moves freely. Paperwhites are very scarce. Violets are in quantity and prices are irregular. Callas are considerably more plentiful. Asparagus Sprengeri and plumosus are very scarce. Calendulas are coming in greater quantity and prices are fairly good. Gardenias are in better supply. Orchids, especially Cattleya Trianae, are abundant and in fair demand. R. C.

INDIANAPOLIS, February 21.—A beautiful supply of beautiful flowers enabled the retailers to make pretty window displays and also to encourage counter sales throughout the past week. Funeral work has been fairly heavy,

and has relieved the market of much second grade material. There have been numerous decorations, but few of them of any consequence. This is unfortunate at this period when there is such a wealth of potted plants to draw from. The heaviest snowfall on record, some seventeen inches, caused much annoyance in the deliveries and made the wagoning to market of supplies a difficult problem. The heavy weights of snow on the houses caused quite a bit of anxiety but only one serious mishap has been reported, that of the Bentley Co. at New Castle, Ind. Automobiles were out of the question and horses had to be again resorted to. Patronage was, of course, a bit handicapped, but did nobly in spite of the weather, which remained below zero for some time.

The Rose supply has decidedly improved and there no longer remains room for protests over quality. Select grades of Killarney, Richmond and My Maryland are sold at \$8 to \$10 per 100; seconds at \$5 to \$6 per 100, and shorts at one half that figure. Bridesmaid and Bride are in better quality than at any time this season at \$2 to \$3 per 100. American Beauty has good buds and foliage, at \$5 to \$5.50 per 100.

Bulbous flowers are arriving in splendid quality, at \$3.50 to \$4 per 100; for Tulips, Paperwhite Narcissus, Jonquils and Roman Hyacinths. Dutch Hyacinths in all colors are offered at \$8 to \$10 per 100. White and purple Lilacs, while not so profitable, find a fairly good sale at 20c. per spray. Mignonette is fine at \$4 per 100. At no time has there been the quantity of Sweet Peas offered at this period. The several colors are wholesaled at 50c. to \$1 per 100. The customary retail figure is 50c. per bunch of 25. Both Callas and Harrisii Lilies move freely at \$10 to \$12.50 per 100 wholesale; \$3 to \$4 per dozen retail.

Rhododendrons, Azalea mollis, Lilacs, potted pans of bulbous stock, Primroses and Cyclamens make the conservatories a splendid sight, and also aid materially in sales through window displays.

I. B.
ST. LOUIS, February 21.—St. Valentine's Day business among the retailers was exceptionally good this year, and the commission men, too, say they did a big business that day in both local and shipping trade. They say never before was stock so plentiful as now.

The retail business suffered greatly last week owing to a big snowstorm and

a cold wave which lasted throughout the week, still, lots of stock was received during that time at all the commission houses. Business, of course, is very quiet during the Lenten season and will be from now until Easter.

Prices are low. Roses are becoming more plentiful and best stock brings from \$4 to \$6 per 100; \$2 to \$3 for shorts. Am. Beauty, \$4 to \$5 per doz. There is plenty of short stock at cheap prices.

Carnations, best, \$3 per 100; \$1 to \$2 for other grades. Violets are very cheap; Californias selling from \$1.50 to \$2 per 100; Pilcher's new Violet still obtains 50c. per 100. Callas and Harrisii Lilies are \$10 to \$12.50 per 100. Sweet Peas, 25c. to 10c. per 100. Roman Hyacinths and Paperwhite Narcissus, \$2 to \$3 per 100. Von Sions and Tulips, \$4 per 100. In greens everything is in plenty at usual prices.

ST. PATRICK.

Indianapolis

Mr. and Mrs. J. A. Peterson of Cincinnati were recent visitors. Their new Begonia made an excellent impression in this locality.

Washington's Birthday does not augment business as it used to, and but few preparations are made in the flower line.

John Grande is offering his usual quantity of select Lilacs for Easter.

Geo. Maunz, of Reed & Keller, visited the shopmen last week.

Tomlinson Hall Market reports a good business. The amount of stock disposed of last week was much greater than that of the foregoing one.

John Rieman has been busy with funeral work of late.

Homer Wiegand is much interested in autos these days, and intends keeping in touch with the speeders.

John Heidenreich is forcing an unusual quantity of potted plants for March. Smith & Young are cutting Bridesmaid and Bride Roses of fine quality these days. Much of their product goes to St. Louis.

A. S. Benson is showing an artistic window of bulbous stock. I. R.

 CUT FLOWERS AT WHOLESALE

New York

C. W. Ward is spending the Winter in lower Mississippi on the Gulf of Mexico. The many friends of Frank D. Hunter, who was recently injured by an automobile, will be glad to learn he is rapidly recovering, and able to attend to light duties at his desk in J. H. Small & Sons' store, with whom he has been for several years.

John Weir of Brooklyn recently had the order for a Violet blanket to be used on the casket of Mrs. Williams, mother of the well-known theatrical man, Percy Williams.

William H. Young, the well-known American Beauty grower, formerly of Clifton, N. J., has now assumed the management of the growing at the greenhouse establishment of the John Young Co., Bedford, N. Y.

H. C. Steinhoff of West Hoboken has some fine plants of Baby Rambler Roses in bloom. They show good culture and are well budded. This variety of Rose makes a desirable plant for outdoor Summer blooming.

John Reimels of Woodhaven, who was taken ill in Pittsburgh and was brought home is progressing very favorably, and is able to take a little outdoor exercise.

James McManus is receiving many other varieties of Cattleyas. Gardenias, Pansies, Freesias and Valley are also popular articles at his store.

Repairs to the damage caused by fire in the basement of Young & Nugent on Thursday, February 10, are under way, and, from indications the store will present a finer appearance than ever before. Business with this firm has been very good of late.

Sweet Peas arriving in the market have a tendency to appear sleepy; the wings close, thereby spoiling the sale of the flowers. This seems to be general with such varieties as Mrs. A. Wallace, Mrs. Wm. Sim, Gov. Fort, etc., and is apparently due to some local cause.

Victor Dorval, with several other growers, recently made a trip among the growers in the vicinity of Philadelphia.

Henshaw & Fenrich are making special offers of Violets to out-of-town buyers. The plans for taking over the Growers' Cut Flower Co. by the Retailers' Association have not materialized. Manager Coan says that his receipts of cut flowers are gradually increasing, likewise the sales of same.

Walter F. Sheridan is handling a fine grade of various colored Tulips.

Phil Kessler's store is headquarters for Freesia Purity.

Ford Bros. are handling white Violets, in quantity, as well as Marguerites and all other seasonable stock.

E. H. Behr of Madison, N. J., is sending to Moore, Hentz & Nash some exceptionally good flowers of Rose Killarney. Mr. Behr has taken over the J. M. Lyons place at Madison, N. J.

Sales of cut flowers for Washington's Birthday did not come up to expectations, owing to the bad weather. These inclement spells are quite a factor in the disposal of flowers, as where preparations are made for the movement of a larger amount of stock much disappointment results both to wholesaler and grower, especially as the left over stock influences the market for several days afterward. Many expressions concerning the lack of output for cut flowers at times of market depression were recently heard, and thoughts were freely expressed to the effect that special offerings twice a week by every retailer would help all concerned, at the same time giving the public the benefit of the cheap flowers.

Dr. N. L. Britton, director in chief of the New York Botanical Garden, accompanied by Mrs. Britton, sailed February 17, on the Ward liner "Morro Castle" for Cuba, on a small exploring expedition. Percy Williams, one of his assistants was also of the party.

Bernardsville, N. J.

The coming season promises to be a very active one, with lots of work for laborers and others.

Gov. Murphy having bought the old Oliver Lodge estate, it is to be laid out by a first-class landscape architect.

On the J. F. Talmage estate a tremendous improvement is being made, including the planting of several thousand trees and shrubs, making new roads and the erection of quite a range of glass.

F. G. Lloyd intends to pull down the house at present on his place, and erect a larger one.

C. R. Hammond will have his place attended to by C. W. Leavitt, the landscape architect of Broadway, N. Y. J. F. A.

Richmond and Killarney

They are now in full crop and in fine condition. You will find extra good value in the medium grades. \$8.00-\$12.00 per 100.

SINGLE DAFFODILS

GOLDEN SPUR, \$3.00 per 100.

PRINCEPS, \$2.00 per 100.

FREESIAS, \$2.00-\$3.00 per 100.

SWEET PEAS, \$0.75-\$1.00 per 100.

VALLEY, \$3.00-\$4.00 per 100.

CARNATIONS, Fancy

\$2.50 per 100, in lots of 500 and over; mostly of the better varieties, our selection of colors. Can furnish them in any quantity.

Club News

The annual election of officers of the Buffalo Florists' Club will take place on Tuesday, March 1, at the Iroquois Hotel. The Club will also hold its banquet the same night. The committee has worked hard to make this a banner night. The menu for the banquet will fully equal the best to be put up by any hotel, and anyone who knows what the Iroquois Hotel is realizes that it is second to none in the country today. The flower committee has written to the best growers of fancy Carnations in the country to put their new Carnations on exhibition here, to give the local growers who were not fortunate enough to see the big show at Pittsburgh a chance to see the prize winners of that show. Any of the local growers not reached by letter may send in any Carnations that they care to exhibit, and should send them marked "For flower show, c/o Wm. F. Kasting Co., 383 Ellicott St." The entertainment committee has a great card that night for the benefit of the members. They have engaged a famous cartoonist to throw pictures of all the local florists on a screen, something which will be worth coming miles to see. Come and view whatever peculiarity the artist sees you have. L. H. Neubeck will explain the cartoons—enough said. Edmund Slattery will positively read his paper on color harmony that he has been working on for the last four months.

Chicago

The Chicago Carnation Co., Joliet, Ill., arranged another excursion to their greenhouses last Tuesday, February 22. Lunch was served at 1 p.m. Many Chicago florists took advantage of this opportunity to visit the establishment.

The fifteenth annual meeting of the Illinois Farmers' State Institute and Department of Household Science will be held at Edwardsville, Ill., on Tuesday, Wednesday and Thursday, February 22-24. Many Chicago seedsmen will attend. Vaughan's Seed Store is mailing a new edition of the "Book for Florists." This year the edition includes the collection of perennials of this house, and nursery stock. Caladiums, Tuberoses and Gladioli, in earloads, are crowding the warehouse, the cold weather checking the shipments of such tender stock. H. Cheeseman of Vaughan's has started on his southern trip.

The Leonard Seed Co. states that its jobbing business is fine and the returns from its catalog up to expectations. Market garden business is looking hopeful, although the weather is somewhat against it, being not quite so early as usual. Prospects for a good Spring are very evident.

Please mention the Exchange when writing.

The stock of Roses visible at Peter Reinberg's for some days past does not indicate shortage in this line with this house. American Beauty, Bride, Bridesmaid and Killarney are in excellent shape. The most conspicuous of any of the Roses is Uncle John, which is always a standby of this house.

Poehlmann Bros. Co.'s Roses are also looming up in greater quantities. They are fine stock and the supply is always consumed as soon as received; such excellent quality cannot but be appreciated.

Winter's Seed Store is busy preparing seeds in packets for the coming Spring trade. This store is now in excellent shape to cope with the Spring work.

D. D. Johnson, of the Evergreen Fertilizer house, returned on Saturday last from a trip to Michigan and Wisconsin.

John Tipley is now gardener at the establishment of A. B. Dick, Lake Forest, Ill., succeeding J. W. Sharfberg.

John Starrett, formerly with the Bentley-Coatsworth Co., is now in charge of the table decorations at the Hotel La Salle.

Axel Nelson, gardener to Martin A. Ryerson, is devoting his spare time entertaining five weeks old Axel junior.

The Killarney and White Killarney Roses grown by Wendland & Keimel, Elmhurst, are in a class by themselves. They are a far superior product of these popular varieties than one generally sees. The two vases they exhibited at Urbana were pronounced by the Rose growers present the most perfect they had ever seen.

C. L. Washburn, the genial Chicago wholesaler, is receiving the congratulations of his many friends on his election as president of the Illinois State Florists' Association.

Our friend Wm. Lynch donned his Spring trousers a little too soon—much to his discomfort.

The Cement Show is attracting florists and private gardeners this week.

Eugene H. Michel, wholesale florist of 4253 Magnolia ave., St. Louis, Mo., spent part of the present week visiting among the wholesalers of Chicago, and was welcomed by all.

John Burke of Clifford & Burke, 55th st. and Wentworth ave., reports an extensive business in funeral work.

Andrew Peterson of Hoopston, Ill., was in town on Monday, and says that he had funeral work amounting to \$440 for the funeral of Mr. Cunningham of that place.

Visitors: Mr. Holm of Holm & Olson, St. Paul, Minn.; Ed. Amerpohl, Janesville, Wis.; W. Brotherton of Jerome B. Rice Co.'s branch store, Detroit, Mich.; Van Aken Brothers, Elkhart, Ind.; A. T. Pyfer, Chicago Carnation Co., Joliet, Ill.; Charles Spickman, Sandwich, Ill.

A visit to the Lincoln Park conservatories during the last month was a treat to the lover of plants in general, and to the Orchid lover in particular. Hundreds of Orchids were on view, in many varieties. Most noticeable were Cattleyas Trianae, Schroederæ and Harrisoniæ; Laelias anceps, anceps alba, albidia and superbie; Oncidium splendens; Dendrobium Curtisii and noble; Calanthes Veitchii and vestita alba; Cypripediums Danthieri, atens, etc. The rest of the conservatories where flowering plants are shown were filled with especially fine plants of Cineraria stellata, Primula sinensis, Callas, Begonia manicata, Hyacinths and other bulbs, etc. In the warmer part of the conservatories are some extra fine specimen Palms. Superintendent Rudolph Schiele courteously acted as guide through the growing houses. They have over seven hundred varieties of Orchids in cultivation at Lincoln Park, besides many seedlings of their own crossing. They also have a fine lot of store and decorative plants, flowering plants for the conservatories, a fine lot of Water Lilies, also some Carnations. The rest of the houses are used for the propagation and growing of bedding plants for use in the park, and some other smaller parks in Chicago.

Detroit

A very brisk call for floral designs, coupled with liberal counter sales, makes everything look bright, notwithstanding dull and cold weather. Calls for decorations for Spring openings are coming more and more, and chances are good for passing through Lent without the sad experience of oversupply and its ruinous consequences.

The persistence of Mr. Fettes to have his window always trimmed in good taste is bringing him a constantly increasing patronage.

Breitmeiers are showing very good dwarf Apple trees and Wistaria in bloom.

J. F. Sullivan's window of Daffodils and single Violets was greatly admired by the general shoppers. F. DANZER.

Newport, R. I.
At the Rhode Island Horticultural
Society's banquet in Providence, on
February 16, President Robertson, Sec-
retary Coughlan and six other members
of the Newport Society were present,
and report having had a most enjoyable
time. In the party of 135 that sat down
to the dinner were quite a number of
ladies, and these with the three clergymen
present lent a decorum not otherwise ob-
tainable—not that the clergy cannot en-
joy a joke, for as a matter of fact the
best stories told during the evening were
told by the Rev. George Kent to his in-
imitable way. The toastmaster, Joseph
E. C. Farnham, ably filled the position
assigned to him. The subjects discussed
embraced a wide range. Secretary Rich
of the Mass. Hort. Soc. said that the
records of his Society prove that horti-
culture tends to longevity and that of
33 members of his Society that died dur-
ing the past year 27 were 77 years old
or over. Another speaker praised the
unselfish work which horticultural so-
cieties are doing for the general welfare
of the people. The conservation of the
nation's natural resources was also com-
mended. But the trusts came in for
severe condemnation; it was noticeable,
however, that no charges of illegal com-
binations were made against those en-
gaged in the flower trade. The com-
mittee of arrangements, Messrs. A. E.
Stene, Thomas Hope and J. Franklin Col-
lins deserve credit for their very ex-
cellent plans, which were carried out
without a hitch. It was a good dinner
well served.

W. Scott Sisson has so far recovered
as to be out for a short time on fine
days.
Edwin S. Manuel has resigned his
position and, March 1, is to join his brother
in the express business, after which he
hopes to have more time to devote to
his favorite hobby, the Dahlia. Through
the carelessness of a coal teamster a
window was left open and some of Mr.
Manuel's best Dahlias were caught, which
will cripple him some in filling orders.
ALEXANDER MACLELLAN.

Meriden, Conn.
Meriden, "the Silver City" differs from
most manufacturing towns in its thor-
oughly democratic character, and from
mere observation it is impossible to tell
the wealthy mill owner from his more
humble workman. Neither has it pre-
tensions mansions, extensive lawns or
grounds. No glass is observable upon
its private estates. A population of 35-
000 supports eight commercial florists:
the oldest of them is William Woodley,
on Silver st. To him has fallen most of
the decorative work of the functions of
the town; opposite to him are the houses
of J. A. Greenbacker, with a store on
Cook ave. John Bonnell, Converse ave.,
and at Jepson's store on Main st., caters
to the northeast part of the town. The
Blatchley Co. finds outlet for the product
of the four large houses at Milldale in
the store on Main st., and supplies near-
by towns. They have made a successful
cut of Carnation Beacon this season,
which has proved a heavy cropper for
them; and they also make a showing of
White Perfection and Fair Maid. Their
longiflorum Lilies make a good promise
for Easter. They also are growers of
Violets. Opposite to the Blatchley
houses is the large range of Mr. Curtis
who raises "Mums for the trade of Meri-
den, Waterbury and New Haven. His
cuts of Bonaffon and Dean at Christ-
mas were good. Having a surplus, he
sent it to Saltford, New York, where
they realized a good price. He finds it
remunerative to grow six flowers to a
stem but the stem receives his earnest
care from the start, knowing that with-
out that he cannot secure his flowers.
When growing for Christmas trade he
practices judicious airing and feeding
and finds no trouble in retarding bloom.
His cleanly kept houses, which between
seasons he devotes to Lettuce, and the
enthusiasm with which he speaks of his
chosen calling, show the love he bears it.
Beaumont, in South Meriden, a Sweet
Pea and Carnation specialist, completes
the craft of the Silver City.
JOSEPH B. DAVIS.

The Mastin Automatic White-Wash and Spraying Machine
is Reliable, Practical and Durable
The tank is made of galvanized sheet steel, and in brass.
The pump is of brass throughout, simple and powerful.
The mixing device keeps the contents of the tank well stirred
up from start to finish.
When the machine is filled to within six inches of the top, a few
strokes of the pump will compress enough air in the tank to produce
a continuous mist-like spray for fifteen minutes.
All parts are made to gauge, and may be had for repairs.
Ask your dealer about our Extension Hose, Extension Rods,
and the Mastin White-wash Nozzle for Bordeaux mixture.
Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

ESTABLISHED NEARLY 50 YEARS

JOHN A. SCOLLAY

74-76 Myrtle Ave. Borough Brooklyn New York City
U. G. SCOLLAY, Manager L. D. Telephone, 1492 Mein

Please mention the Exchange when writing.

Sioux City, Ia.

Severe cold weather struck this town Tuesday, February 15, and the greenhouses were kept warm only by using plenty of coal. The coal situation here is something fierce, a load is very hard to get. Some growers pay as high as \$3.50 a ton for common steam coal. The extreme scarcity of stock in the last couple of weeks, especially Roses, is off, for a while at least, and we find stock of all kinds plentiful, with the exception of American Beauty Roses. We find more calls for Carnations than any other flowers. St. Valentine's Day was a dandy day, for cut flowers especially. There was a great call for Violets, for which all the retail stores were not prepared. However, every florist had Violets, but the demand was so strong that by one o'clock there wasn't a Violet of any kind left. Even Sweet Peas, Tulips and red Roses were in demand, and everyone managed to have some on hand.

A pretty window display is to be seen daily at Rocklin & Lehman's florist store on Douglas st. The window is beautifully decorated with Beech sprays made into a canopy, in the center of which hangs a large bell made of Cape Flowers, and decorated with Japanese Air Plants. Pretty vases of cut flowers are arranged so as to attract a bunch of people, and you can always see a crowd in front of the window. This firm started two years ago, and are doing a very fine business.

There are four other florists in town, and all report doing very nicely.

It is reported that a local florist by the name of J. R. Elder, who has been for a good many years on Pierce st., finds his location too small and is going to move March 1 to Fifth st., about one block around the corner from his present location. He will have a much larger store for his increased business. M.

Fitchburg, Mass.

Business during the latter part of December and the month of January was excellent, but has fallen off somewhat during the first half of February. Carnations sell at prices ranging from 50c. to 75c. per dozen, while Violets sell well at 50c. per bunch of 50 blooms. There are four stores here and all have good locations. The population of Fitchburg is about 35,000.

C. E. Mansfield has the largest store in town, having some 60 ft. of window front, and he handles cut flowers, birds, fish and supplies. This store was the first retail flower store opened, and for the past ten years has been run by Mr. Mansfield. The greenhouses comprise some 8000 sq. ft. of glass and are grown to general mixed stock, which includes a little of everything, excepting Roses, Violets and Valley. Pink delivery boxes are used here, and large numbers of novelties for the children are given away at times as an advertising stunt.

C. W. Moeckel of the Summer St. Conservatories at Main and Summer sts., reports some good trade since the Christmas holidays, and is preparing for Easter business. He has about 12,000 sq. ft. of glass devoted to mixed stock. He has been in his present location for about eight years. Some nice landscape work was reported for the past season and orders for the coming Spring are on hand in satisfactory numbers.

Lewis Smith, 1 Cedar st. has one house from which he does some cut flower and funeral design work, and reports some good orders in this trade. During the Spring and Summer he does considerable landscape work.

W. H. Ritter, 70 Main st., is making some alterations to his store, and is placing a large mirror on one wall. Trade is reported as being fair. Mr. Ritter came here some seven years ago, from Allentown, Pa., where he was connected with A. B. Ellsworth for a number of years. He has about 6500 ft. of glass devoted to general stock.

Jos. Fuller of Leominster has a store at 201 Main st., which is in a good location for transient trade and handy to the larger department stores. The window display shows considerable taste in decoration. Mr. Fuller opened this store about seven years ago.

EASY.—Wife (making a desperate effort to convey a plain hint): "A tree, you know, gets new clothes every Spring."

Husband (too experienced to be caught): "Yes, dear; and it makes them all itself."

Tubular Boilers

Steam and Water

The Most Economical and Efficient Boiler for Greenhouse Heating

CENTRALIZE YOUR HEATING PLANT

The economy in heating large ranges of glass from a central plant is so great that the first cost is repaid in a few years.

Following are a few plants which we designed and installed:

THOMAS YOUNG, JR.
BOUND BROOK, N. J.

150,000 sq. ft. glass heated by steam from a central plant; the exhaust from pumps is passed through a condenser which heats 2-150 foot propagating houses with hot water.

F. R. PIERSON CO.
SCARBOROUGH-ON-HUDSON, N. Y.
150,000 sq. ft. glass heated by steam from a central plant; the steam is passed through condensers and the hot water is forced through the houses with circulators.

JOHN N. MAY
SUMMIT, N. J.

75,000 sq. ft. glass heated by steam from a central plant.

AN IDEAL CURVILINEAR HOUSE

Why do we call it ideal? Simply because it combines in a thoroughly satisfactory way the three most important things absolutely necessary for a highly successful greenhouse—lightness, durability and practicalness.

These are the things you are sure of with the Sectional Iron Frame Construction. The other essential things you can surely be sure of, because L & B are sure—their reputation of fifty years insures you that.

Glad to send you other views and a full description of this house.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 10

NEW YORK AND CHICAGO, MARCH 5, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the prices quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of Elegantissima has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8 in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. pots, \$12.00 per dozen.

Special Gladiolus Offer

AMERICA

A few points of merit—Color: A beautiful soft flesh pink, very light and much like "Enchantress" Carnation, except slightly tinged with lavender. Size: growth very strong and healthy, producing beautiful dark green foliage, and strong, erect spikes of the largest flowers. Purposes: For florists' use its color makes it everything to be desired; delicate, attractive and absolutely new. It is most desirable for planting in beds in parks, private estates, etc.

America. The best commercial pink in existence, 1st size bulbs, 100, \$4; 1000, \$30; 5000, \$125. Attraction. Deep, dark, rich crimson with a very conspicuous large pure white center and throat. At once a most beautiful and attractive sort. 100, \$4.00; 1000, \$35.00.

Augusta. Lovely pure white with blue anthers. 1 1/2 to 2 1/2 inches. 100, \$2.25; 1000, \$20; 5000, \$90. Blue Jay (Baron Hulot). The finest blue Gladiolus yet seen. It is a rich deep color of indigo shade. The only real blue Gladiolus on the market. 100, \$3.00; 1000, \$75.00.

Breachless. Extra fine red variety. 1 1/2 to 2 1/2 inches. 100, \$1.50; 1000, \$12.00; 5000 \$55.00. Columbia. Light orange scarlet, freely blotched and penciled with bluish-purple. Throat freely mottled. 100, \$2.00; 1000, \$15.00; 5000, \$70.00.

Ceres. Pure white, spotted with purplish rose. 100, \$1.50; 1000, \$12.00; 5000, \$55.00.

May. A lovely pure white flower, finely flaked, bright rosy crimson. 100, \$2; 1000, \$15; 5000 \$70.

Nezinscott. Bright blood scarlet, with deep velvety crimson black blotches, and white mottlings in throat. 100, \$4.00; 1000, \$30.00; 5000, \$145.00.

Princess. Rich crimson with very deep shadings in the throat and broad blotches on lower petals. 100, \$10.00.

Salem. Fine salmon-pink, maroon blotches. 100, \$6.00; 1000, \$40.00.

Sulphur King. The finest yellow Gladiolus. 100, \$15.00; 1000, \$140.00.

DAHLIAS

Charles Clayton is my best introduction; for brilliancy, form and stem, this new Cactus leads them all. Other superb Novelties are: Mrs. W. K. Jewett, Maoiton, Princess Yvete, Corona, Olive Tracy. These with other fine varieties were awarded a Bronze Medal at the Alaska-Yukon Exposition, last season. Select list of Standard Dahlias; and Field-Grown Hollyhocks, both Double and Allegheny. Catalogue on application.

European Notes

There is a terribly painful monotony in our business life at present which would be somewhat humorous if it were not for the serious consequences which must sooner or later supervene.

The land is thoroughly sodden, and the valuable properties of our Autumn cartings of manure have run into the water-courses instead of enriching the soil. Except in a very few highly favored spots Spring sowings have not been possible as yet, and on the strong heavy lands where the Broad Beans are usually grown the plow has not been seen. This crop, while it is lightly esteemed on your side of the Atlantic, is of the utmost importance in Europe, as it is one of our most palatable and nutritious vegetables in the young state, and the dry beans are ground into a most valuable meal. Unfortunately, the plant is subject to the attacks of the aphid or grey aphid in very hot weather, consequently it is necessary to sow the stock seed sufficiently early for the grain to be fairly well developed before these destructive bloodsuckers arrive, otherwise the beans will be almost worthless and the crop extremely small. At present, to the knowledge of the writer, not one bean has been sown.

The hardy varieties of Spinach and Cress are in the same predicament, and as these cultures are only accepted by the seed farmers because they are quickly off the ground and the land at liberty for another crop it is easy to understand the cancellation of early contracts and the return of the stock seed. This is where the joke does not come in.

The urgent requests from our friends on your side for the despatch of their goods are perfectly reasonable, and it is no doubt difficult for them to understand why the goods are not forthcoming, but the efforts we have made to comply with their requests, so far as our crops of Cabbage and Radish are concerned, have involved both ourselves and our growers in very serious losses. In the few fine days in September last every plant that

"Horseshoe Brand" Products

"NOT HOW CHEAP—
BUT HOW GOOD"

Isn't it worth something just to know that you have bought the best brand of Lily Bulbs that can be procured? Doesn't it rather ease your mind to know that you have potted up bulbs that come from the very best fields in Japan? Don't you think it is better to pay a little more and buy Horseshoe Brand Giganteum for Easter, 1911, than to buy some other brand of doubtful origin?

Horseshoe Brand Giganteum are positively produced from the very choicest seed-bulbs in the world; and are properly planted and cultivated. If they cannot satisfy you nothing can. Write or call.

RALPH M. WARD & CO.

21 West Broadway—New York

could be harvested was securely stacked, in the hope that the drying winds of October would complete the work of ripening, and a dry fortnight in November would enable the threshing to be safely done; but the aforesaid winds and drying spell have not materialized and the threshings which have been attempted between the rains have resulted in spoiling the seed, for while at the time of threshing it may appear to be dry, two or three days in sacks are sufficient to set it almost on fire, and then no amount of drying and dressing will render it salable. A large crop of a valuable new variety of Radish sowed near Paris has just been condemned and the English growers are equally unfortunate. Stocks that have not as yet been opened had better be left untouched until April, by which time we live in hopes the floods and rains will have ceased.

The value of vigor of constitution is being demonstrated in the threshings of Mangel Wurzel which are made between the showers. Delicate varieties like Golden Tankard fall far short of our lowest estimates, while the Giant long red is fully 10 per cent. better than we ever expected. The surplus is not likely to go-a-begging long.

EUROPEAN SEEDS.

American Notes

A Busy Week

The past week has been a very busy one with the seedsmen. It is always so just as soon as we pass Washington's Birthday, seed selling then commences in real earnest. Every line of the business would seem to be showing an increase over last year, and night work is now in full swing with all. This is one of the years when such small deliveries are being made by the growers, on so many seeds, that on all sides much fault finding is being heard. Of course, it is only human nature to hate to deliver any seed at a small part of its present market value, and no doubt there is considerable truth in the claim that some deliveries have been unduly cut down; but as a whole it is only common justice to say that our seed growers carry out their contracts to the letter and deliver every seed produced pro rata among their customers. Seed contracting under our present system works very nicely in a season of average seed crops; but in a year of extremes, whether the returns are very great surpluses, or crop failures, much dissatisfaction is at once very apparent with both grower and dealer. In a year of enormous seed crop surpluses, the grower fills his contracts to the fullest limit for a customer who does not really need all the goods, but takes them because he has agreed to do so. On the other hand, in a season of universal seed crop failures, the seedsmen insists that the seed grower give up every seed he has harvested—the two extremes. Let us hope that in the near future a method of seed contracting may be devised, the results of which will be more satisfactory to all concerned.

Gladioli Popularity

It is only a few years since the annual sales of these bulbs, with any seedsmen, were very insignificant as compared with what has been accomplished in their distribution, during the last few seasons especially. The Gladioli are now not by any means the side-issue they used to be in the list of Spring bulbs, but one of the best selling items of the entire list. One of our most noted specialists in growing and supplying these bulbs to the trade expressed the opinion to the writer a few days since, that large as the sales of the bulbs were last season a very material increase in this direction will be noted in the future. That the Gladioli is coming into its own with flower-loving people there is no doubt, for this flower certainly has qualities well calculated to make every garden maker enthusiastic about it. The many superior named varieties make fast selling specialties, while of course the various priced mixtures can be disposed of in very large quantities. Every dealer who goes into Spring bulbs at all, should not neglect to carry a generous supply of these bulbs in the better class of mixtures, which can now be so reasonably purchased that they can be offered at popular prices.

The Summer Cypress

There would seem to be increasing interest manifested each returning season in this old-fashioned annual. This plant—*Kochia trichophylla*—is also known as Mock Cypress, Mexican Fire Plant, etc. The writer has had many

RAWSON'S LEADING ASTERS

QUEEN OF THE MARKET ASTER

This is the best early out-of-door Aster. In colors as follows: Dark Blue, Light Blue, White, Rose, Peach Blossom, Crimson, per 1/4 oz., 20c.; per oz., 60c. All colors mixed, per 1/4 oz., 15c.; per oz., 50c.

RAWSON'S NEW MIDSUMMER ASTER

This is one of the best Asters for Midsummer or late crop and we recommend it highly. Flowers are large and are borne on erect long stems, often 2 feet in length. We offer the following colors: Pure White, Delicate Shell-Pink, Royal Purple, True Lavender, and Bright Rose, per 1/4 oz., 60c.; per oz., \$2.00. All colors mixed, per 1/4 oz., 50c.; per oz., \$1.50.

RAWSON'S LATE BRANCHING ASTER

This is the best American Branching Aster grown to-day. It is a late cropper and a money-maker. Flowers grown from our seed invariably bring from 1/2 to 1c. a flower more in the wholesale market than other similar strains. We can furnish the following separate colors: Crimson, Dark Blue, Light Blue, Rose Pink, Shell-Pink, Scarlet, and White, per 1/4 oz., 30c.; per oz., \$1.00. All colors mixed, per 1/4 oz., 25c.; per oz., 75c.

We have many other good strains of Asters and specialties for Florists all described in our special catalogue to florists (mailed free).

FLORENCE NURSERY FLORENCE, S. C.

Please mention the Exchange when writing.

inquiries regarding it lately. It is very easily grown from seed, and forms an oval bush two to three feet in height, which is densely clothed with feathery light green foliage, deepening in color as the summer advances until the whole plant assumes a fiery crimson hue. As a specialty it will be found a very good seller, as it has been advertised to quite an extent and is consequently pretty well known.

New York Seed Trade

The stormy weather of the first part of the week temporarily interfered with the retail counter trade, which had begun to be very brisk. The mail trade has been heavy. All the houses are working nights, trying to keep the orders from getting too far ahead, at this early date. Every sign points to a splendid season of seed selling.

Henry Nungesser, president of Henry Nungesser & Co., who has been laid up with a sprained ankle for the past few weeks, is now recuperating at the Marlborough-Blenheim Hotel at Atlantic City; from last reports he is improving rapidly, so that he is expected to be back at his desk in the very near future.

Walter E. Cook, who for several years past has been with J. M. Thorburn & Co., is now with Vaughan's Seed Store. Mr. Cook will travel in the eastern territory.

The Stumpp & Walter Co. are meeting with very large sales of their lithographed packets of vegetable seeds, which they supply at \$2.50 per hundred.

J. M. Thorburn & Co. have very attractive window displays at their Barclay street store.

L. W. Wheeler, who for many years was the manager of Vaughan's Seed Store in this city, and for the past three seasons identified with California seed growing interests, has become the secretary of the new Pieters-Wheeler Seed Co. Articles of incorporation have been filed with the Secretary of the State of California, for the incorporation of this new company, which will take over the seed growing interests of A. J. Pieters. The stock was subscribed in its entirety by A. J. Pieters, president of the new company; H. M. Pieters, vice-president; and Mr. Wheeler. Mr. Wheeler's many friends in this city wish him every possible success in his new venture.

At Boddington's, great activity is very manifest. Sweet Peas are meeting with larger sales by far than in previous years. The special offers of Cannas and Roses made by the house are also bringing many orders, and it is not strange, as quality and prices are both all that can be desired.

Wm. Elliott & Sons are very busy getting things in shape for opening the auction season. The first sale of the Spring will take place March 15, when some fifteen cases of Roses and confers will be offered. The lists giving details will soon be mailed.

The demise of James J. H. Gregory of Marblehead, Mass., came as a shock to the seedsmen of this city, a great many of whom have been life-long friends of the deceased.

Burnett Brothers have been receiving many large orders for nursery stock.

Those seedsmen who handle plants, expect, and are arranging for a large sale of the same at Easter.

Western Seed Trade

In Chicago, and the West generally, the seed trade is somewhat busier than usual at this time of the year, especially considering the wintry weather we have been experiencing. As is well known, many items are scarce, and there is a

general tendency to higher prices all around.

In some items, Sweet Corn for instance, buyers begin to realize that it will not be so much a question with them of getting sorts with a given name to come in at a particular season, early, medium or late, but rather of getting good sorts of fair germinating qualities that will cover these several seasons.

The conditions are well set forth in the information from Omaha, which seems to be authentic, and is to the effect that seed Corn, generally, in Nebraska will not germinate quite an average of 33 1-3 per cent. This, of course, is disquieting news, but it has been looked for in several quarters because of the knowledge that many crops were affected by frost in the fields.

Market gardening is booming everywhere. The orders are largely in excess of those of a year ago at this time and good prices are being paid without hesitancy, when it is felt that the stocks offered are suitable and reliable. The other day it was heard that several varieties of Cabbage were being sold at something like 50 per cent. above what is usually asked for them. Of course, it is well known that many articles are in short supply and show inferior germination this season.

Onion sets are moving rapidly, and at the moment are slightly lower in price than they have been. This is no doubt due to the fact that some holders who have stocks of rather poor quality are finding that they are not keeping well with them. It is more than likely that as soon as these inferior grades have been distributed prices for standard goods will harden materially. This is

Caladium Esclentum, or Elephant's Ear

Please mention the Exchange when writing.

non-warranty clause, used by the majority of seedsmen on their sheets and in their catalogs, a well-known seedsmen places the following statement on his order sheet: "In sending this order I rely upon your reputation as honest and experienced seedsmen that you will use every care to send me only seeds which you really believe are the best that can be produced for planting. Should I discover that any mistake has been made, I shall advise you promptly or return you the seeds, so that you can either replace the seeds or refund the price paid, according to your non-warranty in catalog. I recognize the fact that a mistake may occasionally occur and also that success depends largely upon conditions of soil and climate, which are beyond human control; consequently no honest seedsmen could assume responsibility for the crop."

Working Another Man's Thunder

One of our prominent seed firms (A) has mailed us a copy of a letter which they recently forwarded to another seed firm (B) who, they claim, had made use of the photographs shown in their catalog (A's).

For one catalog house to copy the illustrations of another is not an offense subject to the law, but, certainly, it is not an honorable thing to do.

It is practically impossible to prevent the copying of illustrations; a general copyright on the book, as we understand the case, will not give the protection desired. The only form of protection obtainable is through the copyrighting of each and every individual cut used in the catalog, and even then that copyright will not hold unless the cuts so copyrighted are made from original photographs, the sole property of the catalog firm. For instance, it would not be possible to copyright an illustration in a case where the photograph had been bought from a person who is offering same in open market.

Apart from the above, the entire argument resolves itself down very closely to one of the observance of a code of honor which will not allow one house to make use of another firm's illustrations, except by permission.

Under the circumstances, the letter in question is very much in order at this time, and we submit it herewith:

"We were looking over copy of your 1910 catalog, kindly sent, with much satisfaction and mentally congratulating you upon its fine appearance until we came to the ——— pages and noticed that you had labeled as photographed by your firm illustrations of subjects merely photographed from our own original illustrations of other varieties and renamed by you. In the first place, even if you had used these illustrations to represent the same varieties, you would have no right morally to reproduce same without permission. When you deliberately copy the original illustrations of our own novelties and give them other names we certainly fail to appreciate your concluding remarks on page ——— that your catalog has a deserved reputation for truthfulness and accuracy by illustrating entirely from photographic reproductions of actual specimens, taken by ourselves."

"If you have any idea of business honor, how can you square your conscience with your unwarranted action?"

evidenced by the fact that inquiries from all over the country are more numerous for this season of the year, especially considering the cold weather, than ordinarily. If the weather was normal the many inquiries would not be so surprising.

WESTERN SEEDS.

Seed Trade the Country Over

GRAND JUNCTION, COL.—The Grand Junction Seed Co. has incorporated with a capital of \$10,000.

LARIMORE, N. D.—S. F. Mercer and J. H. Magoris have opened a new seed store under the style of the M. & M. Seed Co.

HARRISBURG, PA.—Walter S. Schell, for many years connected with the Holmes Seed Co., has started a seed store at 1308 Market st.

BATH, ME.—Wm. R. Kimball, proprietor of the Pine Tree State Seed Co. has purchased the business of the Eastman Seed Co., of East Sumner, Oxford Co., established 25 years.

FARIBAULT, MINN.—At a meeting of the stockholders of the Farmer Seed Co., held Feb. 15, it was voted to change the name of the concern to the Farmer Seed and Nursery Co.

OSWEGO, N. Y.—The business of P. G. Campbell has been incorporated under the name of the Campbell Flower & Seed Co. The business will shortly be removed to a new building in course of erection on the river dock.

JOSEPH MEEHAN

AMERICAN ASSOCIATION OF NURSEYRYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-president; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer.

MEDFORD, OAK.—The Rogue River Valley Nursery Co. has been incorporated with a capital of \$20,000.

LOCKPORT, N. Y.—The firm of D. T. McCarthy & Sons has been incorporated to do a general nursery, horticultural and floricultural business. Capital \$33,000.

MARSHALL, MINN.—The building of the Lyon Evergreen Nursery Co. was destroyed by fire Feb. 20, with a large amount of nursery stock.

SANTA BARBARA, CAL.—The Southern Pacific Railroad is arranging to make a practical test, covering three years, of the various kinds of Eucalyptus, for building cars.

DAYTON, O.—At a meeting of the Miami Valley Nurserymen's Association held here Feb. 17 the following officers were elected: President, John Siebenthaler, Dayton; vice-president, Fletcher Bohlender, Tippenehoe City; secretary-treasurer, M. F. Gainer, Xenia; executive committee, M. F. Barnes, Hamilton; S. E. Fergus, Troy; J. W. McNary, Dayton.

Taxus cuspidata The Japanese Yew, *Taxus cuspidata*, seems quite rare in collections, at least it has not been our good fortune to meet with it often, hence it was a pleasure to photograph a thrifty plant of one we found on a gentleman's grounds last Summer. One trouble with many persons is that they cannot distinguish this species from some varieties of the English Yew, and, indeed, the foliage of it and some of the latter is very much alike. The English Yew, *Taxus baccata*, is prolific in varieties. There are many with foliage not unlike that of the Japanese one, *cuspidata*, but none of them have its spreading habit. Those of our readers who may be familiar with our wild Yew, *Taxus Canadensis*, will see a close resemblance in it to the Japanese one, in its habit of growth, having the same spreading character, but differing, perhaps, in being still more spreading than the Japanese. On a hillside, such as is the position where the plant photographed is growing, there are situations for which spreading and partly spreading plants are well fitted.

Magnolias in Fruit Where making a selection of Magnolias for planting it is almost always with a thought to their flowers that a choice is made, this and whether of tree or of shrub shape. These are points that all should consider, but there is another one rarely thought of as affecting a choice, which is the one of ornamental fruit. This is something well worth considering, for there is one species at least, the *Magnolia tripetala*, of great merit in this line; in fact, many persons prefer its display of fruit to that of its flowers.

All of our native species, *Fraseri*, *glauca*, *tripetala*, *acuminata* and *macrophylla*, bear colored seed pods freely, but the one that surpasses all others in beauty is *tripetala*. While all have more or less pink color the pods of *tripetala* are a deep pink, and being of a good cone shape and three to four inches long the display they make is much greater than that of their flowers, which, like all the native species, are of a cream white. As the flowers of this species have a disagreeable odor rather than otherwise the handsome pink seed pods should be mentioned by those who recommend its planting. *Fraseri* cones are of good size and shape, and a good pink, too, but hardly anyone seems able to supply this species. *Acuminata* pods are comparatively small, and not so well colored, while those of *macrophylla* are nearly round and have the least color of any. *Glaucia* is a good light red, and its handsome glossy foliage sets off these pods to great advantage.

Among the varieties in the Japanese and Chinese section there is one, *Magnolia Kobus*, which surpasses all others in pod producing. Not only does every flower practically produce a pod, but these pods are of most grotesque shape. The greater number of them look like newly hatched young birds, minus the legs. Another one, *M. Lenzii*, bears large, bright colored pods of irregular outline, and bears them freely, too, making it well worthy of a position on a lawn for this reason. *Soulangiana* bears a few pods, but only a few, while *conspicua* and *stellata* rarely. The writer has never seen a pod on either, but it is recorded that *stellata* has been known to bear a few in this country.

Our evergreen *Magnolia* is omitted from this list, as its range of hardiness is too limited, thriving no farther north than Philadelphia, and only there when in sheltered positions. Its pods are roundish, much like those of *macrophylla* as well as in their color, a pale pink. The *M. grandiflora* is referred to.

Pruning the New Hydrangeas

Spring is so near at hand now that the pruning of such Hydrangeas as require it may be done at once. Our native species, as well as their varieties, should be well pruned. The native ones are arborescens, radiata and cinerea mainly, and both arborescens and cinerea have varieties bearing sterile heads of flowers. The variety arborescens is the now well-known grandiflora alba; cinerea is sterilis, or 'Teas' Snowball Hydrangea. All these, the natives and their varieties, bear close pruning, as this induces vigorous shoots, which bear large heads of flowers on the ends. The Hydrangea paniculata and its varieties also require close pruning, and for the same reason as given for the native sorts.

Coming now to the Japanese sorts of the Hortensia type, these require exactly the opposite treatment. They must not be pruned to lose their branches, nor, indeed, should they lose their terminal buds, for it is these buds that are sure to flower if undisturbed. This is why these Hydrangeas cannot be left out uncovered where freezings are severe. A few degrees of frost, perhaps 10 degrees, will not hurt them if in the shade, hence a covering of leaves, with, perhaps, an inverted barrel over them, is sufficient to ensure the safety of the shoots. Winter covering is mentioned now merely as bearing on the subject of pruning. The only pruning that the Hortensia calls for is to thin out some of the shoots if too close together. There are two divisions of the Hortensia. The first one contains the old Hortensia itself and its varieties Thomas Hogg and Otaska. The second one is the Japonica class. These are represented by the corulea, Imperatrice Eugenie, stellata and others. They have flat heads of flowers instead of rounded ones, and while some are white there are pink and blue ones as well.

To sum up, prune well all the native species and varieties, and the paniculata and grandiflora, but do not prune the H. Hortensia nor the H. Japonica and their varieties.

Single-Stemmed Arborvitæ

When the snows of Winter are on us it makes evident the folly of growing Arborvitæ and similar evergreens with two or more main stems. Such trees always become unsightly when heavy snows come. The weight of the snow forces the branches apart to such an extent that rarely do they get back to their old positions. It is true that by tying the limbs together the spreading apart may be prevented, but why grow them with more than one leader, making work to keep the tree in shape, when by cutting out all shoots but one when the plants are small it all can be avoided? Started properly, to the single shoot, the tree will be just as full in time as if there were several leaders. At the present time, the close of a Winter noted for many snowstorms, many evergreens have presented a sorry sight spread apart in the way aforesaid.

Even with evergreens that have grown up five or six feet with two or more leaders it is often the case that all but one can be so cut back as not to injure the outline. If cut back to three feet or so, the cut back portion will become strong and stiff, that snows will not weight it outward from the rest of the tree; and in the end a far more satisfactory tree will result than if it had been untouched.

The American Arborvitæ is the most apt to spread apart of all evergreens; its columnar habit causing this. The Chinese species is not so bad; for one reason because it usually makes many leaders instead of but two or three, and then the whole growth of the tree is more bushy in proportion to the height, sustaining the tops better.

Irish Junipers and Yews make stiffer trees, and are not pulled apart so readily as Arborvitæ. Leaving out the spreading-apart tendency, all buyers of the evergreens named prefer those with a single main stem to any others.

Taxus Cuspidata—Japanese Yew

The Flame-Colored Willow

At this season of the year, Mid-winter, one of the attractions of a lawn is the flame-colored Willow, as it is called, *Salix Britzensis*. It is called flame-colored, but it is really a darker red than flame, closely resembling the brilliant Winter color of the red twigged Dogwood, *Cornus florida*. The color of this Willow, as well as of the Dogwood, is the Winter dress. They take on the color with the approach of Winter, losing it again when Spring opens. The color is most intense in Mid-winter, in the coldest days. These are the two best colored shrubs or trees of all known. There are other Willows and other Dogwoods of some color, but not to compare with these.

To get a mass of color several plants should be set together, according to the extent of a lawn. A dozen together make a fine display.

The shoots that color the best are those of the past season's growth, therefore, to get these shoots, and good strong ones at that, cut all the plants back close when Spring comes, then the strong shoots will result.

Another good thing to do is to select a situation where the ground is deep and damp, preferably, and do not disturb the plants too much by too frequent transplantings, which would check good strong shoots being made.

Those Cherry Trees from Japan

Referring to the 2000 Cherry trees which were sent to President Taft by the Japanese government, and which had to be destroyed because of their diseased condition, it is probable they were of the well-known beautiful sort *Cerasus Sieboldi*, known as the double-flowered Japanese Cherry. While it is to be regretted that trees sent in such a friendly way could not be planted the President could readily secure the number of trees of the same kind here should it be desired to plant such a variety in Potomac Park, where it is said the Japanese ones presented were to go. This double-flowered Cherry is one of the handsomest of the double-flowered class; its flowers are larger and of a full pink color in the bud and until the flowers are fully expanded, when mostly a white color is displayed.

A Chinese double-flowered Cherry has been common in gardens for a hundred years or more, and there is a double one of the common garden Cherry, but neither of these equal the Japanese one referred to, *Sieboldi*.

To get a stock of these Cherries quickly, young plants of the common Mazzard Cherry should be set out this Spring, and these should be budded in Summer. With strong stock to work on, a plant with a good top is soon obtained.

The attention of importers of nursery stock is called to the fact that there is important legislation pending at Washington. The Simons Bill should be defeated and that approved by the Am. Ass'n of Nurserymen adopted. For particulars, turn over page.

California Privet

California Privet is still the leading hedge plant, because nothing has yet been produced to surpass it.

I have an extra large stock of two-year-old plants, in all grades, to offer for Spring shipment. This stock is well branched with plenty of fibrous roots.

I can compete in price, quantity and quality with any reliable grower.

I AM GROWING PRIVET TO SELL

LET ME QUOTE YOU PRICES BEFORE YOU BUY.

Federal Bill Providing for Inspection of Imported Nursery Stock

H. R. 15656 introduced by Congressman Jas. S. Simons of New York, and which is now in the hands of the Committee on Agriculture, provides for the inspection of nursery stock at ports of entry of the United States, to authorize the Secretary of Agriculture to establish a quarantine against the importation and against the transportation in interstate commerce of diseased nursery stock or nursery stock infested with injurious insects, and making an appropriation to carry the same into effect.

In effect, the Simons Bill provides for dock inspection of nursery stock at port of entry, a proviso which, as is pointed out in the letter that follows, is simply impossible of carrying into effect. If the Simons Bill is passed it would either ruin the importing industry or eventually lead to a perfunctory examination of stock (in order to comply with Customs and steamship regulations) that would, in effect negative the purport for which said Bill has been framed.

The following is an abstract from a letter sent by the Horticultural Importers' Association to the Committee of Agriculture at Washington, proving the ineffectiveness of the proposed Simons Bill:

The following facts will prove that the above measure is "impracticable" and "impossible of execution."

The arrivals at the port of New York for the past 11 days (Jan. 20 to Jan. 31) of French nursery stock were as follows—which was about the average weekly shipment for the past three months.

Per S. S. Mexico, January	20—927 cases.
" " Oceanic "	24—20 "
" " New York "	29—22 "
" " Florida "	31—406 "

1375 cases.

Each case contains from 10,000 to 15,000 seedlings (some cases contain 40,000) so that the 1375 cases contain an approximate total of 17,000,000 seedlings valued, when shipped, at approximately \$60,000, or at the dock, New York, approximately \$100,000, which includes about \$26,000 paid to the United States Government in import duties.

The above shipments represent almost exclusively seedlings from France (representing raw material for nurserymen) which cannot be produced in the United States. The import duty exceeds in some instances two hundred per cent. of foreign cost. The seedlings are packed tightly, by means of machinery and appliances, in paper lined cases, and unpacking in transit would greatly damage contents even if they could be repacked into the same cases.

Entry has to be made and duty paid to the United States Customs within 48 hours to comply with Customs regulations. The cases must be removed within three to four days to comply with steamship regulations, and a glance at above figures will prove that this cannot be done, even though the present congestion on the docks be entirely overlooked.

Like fleas on a dog, insect pests should be killed, but we do not see why a valuable dog should be killed to get rid of a few fleas, when the fleas are not harmed by the killing of the dog.

With the foregoing letter, a copy of the subjoined protest was sent to every member of the Committee of Agriculture:

Whereas: In January, 1909, a Bill known as H. R. 27367, was introduced into the United States Congress, providing for the inspection of nursery stock at ports of entry of the United States, which Bill passed the House, was before the Senate, and was being considered before the nurserymen had knowledge of it;

And whereas: The Legislative Committee of the American Association of Nurserymen at that stage receiving information that such a Bill was being considered, secured a hearing before the Committee on Agriculture, Dr. Howard, the framer of the Bill being present, and after lengthy argument, succeeded in having the Bill withdrawn on the understanding that the Legislative Committee of the American Association of Nurserymen would prepare a new Bill which would be acceptable to Dr. Howard and the nurserymen of the United States;

And whereas: The nurserymen did prepare such a Bill, having the endorsement and approval of the American Association of Nurserymen and the Association of Horticultural Inspectors, but though repeated efforts have been made to arrange a conference with Dr. Howard, those efforts so far have been without result;

And whereas: On December 18, 1909, a Bill known as H. R. 15656 was introduced into the House by Mr. Simons, the text and purport of which is exactly the same as the former bill known as H. R. 27367, and to which the nurserymen and kindred interests so strongly objected;

Therefore, be it resolved: That the Horticultural Importers' Association, here assembled, protests against the passage of Bill H. R. 15656 as being impracticable and, in the present congested condition of the New York docks, impossible of execution without large unnecessary losses being incurred, and as the nurserymen's Bill provides for adequate inspection at destination—which we believe to be the only practical and effective way—we strongly urge that the Bill prepared by the Legislative Committee of the American Association of Nurserymen be substituted for H. R. 15656;

And be it further resolved: That the Secretary of this Association be authorized to forward a copy of this resolution to the Hon. Chas. F. Scott, Chairman of the Committee on Agriculture, the Hon. Wm. W. Cocks of New York, and the other members of the Committee on Agriculture.

The following is an abstract of the Bill which was prepared by the Legislative Committee of the American Association of Nurserymen, and which is, we understand, agreeable to all interests involved:

Bill Proposed by American Association of Nurserymen as Substitute to Various Bills Now Before Congress

AN ACT

To provide for the inspection of nursery stock and to authorize the Secretary of Agriculture to establish a quarantine against the transportation in interstate commerce of diseased nursery stock or nursery stock infested with injurious insects, and making an appropriation to carry the same into effect.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

That all nursery stock, brought into the United States, including field-grown florists' stock, trees, shrubs, plants, vines, cuttings, grafts, scions, buds, pits, or seeds of fruit and ornamental trees and shrubs, shall be subject to inspection by official experts of the Department of Agriculture at final destination on the premises of the owner or consignee.

Sec. 2 provides that importers of above described stock shall, within twenty-four hours after arrival thereof, notify the official expert of their arrival and delivery to consignee. The official expert is authorized to enter the premises of consignee or owner, where such nursery stock is stored, and inspect same, such examination to be made within five days.

Sec. 3 provides that every package of imported stock shall have plainly and legibly marked thereon the name and address of the shipper, owner, or person forwarding or shipping the same, and also the name and address of the person, firm, or corporation to whom the same is forwarded or shipped, or his or its responsible agent.

Sec. 4 provides that when any importation of nursery stock is found infested with injurious insects or their eggs, larvae, or pupae, or with tree, plant or fruit disease or diseases, the contents of boxes or bales so infested or diseased may be disinfected at final destination on the premises of the owner or consignee, under the supervision of the official expert. After disinfection has been so performed in a manner satisfactory to the official expert, the trees, vines, or other articles shall then be released. If it be not practicable to fully disinfect such stock, such portion of it as shall be infested shall be destroyed.

Sec. 5. That upon complaint or reasonable ground on the part of the Secretary of Agriculture to believe that any nursery stock grown within the United States is infested with injurious insects or diseases new to the United States and likely to become subjects of interstate commerce, the Secretary of Agriculture shall cause the same to be inspected by a qualified expert, and, if need be, the trees or plants found infested shall be placed under quarantine until such infestation is removed.

Sec. 6. That it shall be unlawful for any person, persons, or corporation to deliver to any other person, persons, or corporation or to the postal service of the United States (except for scientific purposes and by permission of the Secretary of Agriculture) for transportation from one State or Territory, or the District of Columbia, to any other State or Territory, or the District of Columbia, or for exportation to any foreign country, any trees, plants, shrubs, vines, or other nursery stock which are under quarantine in accordance with the provisions of this Act. Any person, persons, firm or corporation who shall in any way violate the provisions of this Act, shall be deemed guilty of a misdemeanor, and on a conviction thereof shall be punished by a fine not to exceed \$500, nor less than \$200, or by imprisonment not to exceed one year, or both, at the discretion of the court.

Secs. 8 and 9 regulate the date when the Act is to go into effect and provide for the money required.

Sec. 10 provides that the provisions of this Act shall not prevent the inspection of any nursery stock or other described articles by the authorized inspector of any State or Territory at the final point of destination, in accordance with the laws of such State or Territory.

Evergreens for Hedges

Following up his former letter on evergreens for hedges, Mr. Otto Katzenstein of Atlanta, Ga., sends us the following notes on two evergreen Hollies, the Ilex Cassine and the I. Dahoon:

"I am mailing you under separate cover a sprig of the Dahoon Holly—Ilex Dahoon—which to my idea is the best of our native evergreen Hollies. The Yaupon—Ilex Cassine—resembles it in every way only the leaves are much smaller. The Ilex myrtifolia resembles at first sight a Cotoneaster microphylla and is not very graceful in its shape. I have no experience with Ilex Dahoon as to its hardiness further north. Atlanta, however, is pretty cold and I know of several instances where the mercury dropped below zero following a spell of comparatively warm weather, and I. Dahoon passed them all without the least injury, which speaks well for it. Live Oaks right close by were killed back very much during these same cold spells. It seems to me that with a little coaxing I. Dahoon could be made to live through your Winters even better, because you can give it snow protection as a rule. I do not think that

Ilex Cassine. Yaupon Holly

I. Dahoon is common anywhere in the South, but I feel confident that a good-sized stock could be brought together which would be worth a whole lot of money. If I had a nursery I should devote a good deal of space to this specialty. The only drawback, and that it shares with all other Ilex, is the difficulty with which it can be transplanted, unless handled properly. I moved a number of rather large specimens this Fall with thus far 100% success, and I moved a Holly last Spring from a yard where it had seen Sherman march through Atlanta. It measured 38 in. around the girth three feet above the roots, and it is doing first-rate now, about three miles away from its old home. Another very fine shrub we have here and which is very scarce is the Olea Americana. This also has stood all kinds of weather unharmed. A few years ago, I imported from Japan a quantity of Quercus arguta, which is proving quite an accession to our evergreens. It is a rapid grower and is chestnut leaved. I have a number which grew 2 ft. last season. That is growing some. It also seems hardy all right."

Mr. Katzenstein also mentions that some botanists have now transferred the names of these Hollies, but we give the botanical names as they have been known for some 150 years, and which appear good enough for them to many of us yet.

J. M.

THAT subscription to F. E. you have been thinking of taking out for a brother florist! Why not send it in now?

Ilex Dahoon. Dahoon Holly

EASTER LILIES

EASTER PLANTS

AZALEAS, 6½ to 8-in. pots, from 75c. to \$5.00 each, larger plants from \$5.00 to \$10.00 each, Pyramids \$4.00 and \$5.00 each.

LILIES, \$12.00 per 100 buds; \$120.00 per 1000, \$550.00 per 5000.

LILACS, White and Blue, 8 and 9-in. pots, \$1.50, \$2.00, \$2.50 and \$3.00 each.

SPIRAEA, Gladstoni, White, \$6.00, \$9.00 and \$12.00 a doz.
Queen Alexandra, Pink, 75c., \$1.00 and \$1.25 each.

HYACINTHS, Single, pots \$2.00 per doz. Only extra selected bulbs grown.

Miniature, 6, 7 and 8-in. pans, 35c., 50c., 75c. and \$1.00 a pan.

TRUMPET NARCISSUS, 35c., 50c., 75c. and \$1.00 a pan.

LILY OF THE VALLEY, in 5-in. pots, 35c. each; 6-in. pans, 50c. each; 7 in. pans, 75c. each and 8 in. pans, \$1.00 each.

DWARF ROSES, Baby Dorothy, Baby Ramblers, \$5.00, \$9.00 and \$12.00 a doz.

ROSE, Mme. Cutbush, Enchantress pink, large plants, 6½ and 7-in. pots, \$12.00 \$15.00 and \$18.00 a doz.
Large showy plants of Dorothy Perkins, shell pink, 6½ to 9-in. pots, \$1.50 to \$7.00 each.

Star-Flowered Rambler, single, large trusses, outside petals light pink, centre white, 6½-in. pots, \$1.50 and \$2.00 each; large plants in 7 to 9-in. pots, \$3.00 to \$7.00 each.

Everblooming Crimson Rambler, (Flower of Fairfield). Brilliant red color, 6½, 7, 8 and 9-in. pots, \$2.00 to \$3.00 each.

All the foregoing Roses are timed for Easter and are perfectly budded.

With shipping orders, please add to the amount of bill 75c. for each ten dollars worth of goods, to cover the expense of cases and packing.
For other varieties of foliage and Easter plants, write for price lists.

THE ELIZABETH NURSERY CO., Elizabeth, N. J.

Please mention the Exchange when writing.

Berlin, Conn.

W. H. Shumway is the only florist in Berlin, having some 4500 feet of glass. Mr. Shumway makes a specialty of Carnations and has put one, the Edward, upon the market recently. This, however, has been put aside in favor of another new and better variety, the Almira, a new seedling of Enchantress X Wm. Scott, showing its Enchantress parentage in size of bloom and stiffness of stem, and the best producer of any variety that has been tried out here in several years. Mr. Shumway enjoys quite a reputation locally as to his ability to grow large flowers and sends a considerable number of them to out-of-town folks.

California Plant Notes

Jasminum primulinum has bloomed this season for the first time hereabouts and what a grand, good thing it is. It is not fragrant, as stated in some catalogs. A Winter bloomer, January, February and March, it is a gorgeous sight. The yellow flowers, salver shaped, some single, some with a bunch of petals in the center, give it a semi-double appearance. They are as large when well grown as a silver dollar. The plant is an evergreen and of slender trailing habit, very like that of Forsythia suspensa, therefore must be trained to a stake. At Redlands I met with one out in the open, trained to a support six or seven feet high, with branches drooping to the ground. We need not lament our inability to grow Alamandas in the open since this new acquisition is quite as showy. Soon Begonia Tweediana will be in bloom, which is equally floriferous, of the same colored flowers and quite as gorgeous when in full bloom. These two subjects give us a succession of bloom for about six months.

Cardiospermum hirsutum—Perennial Balloon Vine—I met with this Winter, covering the one end of a barn. It was in full bloom, though the temperature was too low at night for it to set any "balloons." The seed vessels of the annual variety C. Halicacabum was one of the delights in my childhood days—to crush and hear the explosion. How often dear mother was compelled to use severe measures to save the pretty balls from destruction by my mischievous hands I have forgotten. This subject is aptly named hirsutum, covered as it is with soft violet-purple hairs. It is desirable in this climate, because an evergreen vine of rapid growth, not very unlike Clematis paniculata in appearance. It is interesting because of the peculiar seed vessels, the seed being attached to paper-like disks as large as a quarter dollar.

An experimental bed of early Tulips is just now coming into bloom on a private place in this town, where money is no consideration when it comes to producing fine effects in gardening. As frequently stated in these notes, this class of bulbs is of no account in southern California. The late ones give good satisfaction. In this case the stems will probably be an inch long.

The first instance of successful Blood-Heart culture in this State came under my observation this week. I shall make inquiry as to what methods were used to obtain this result.

A beautifully variegated leaved Duranta Plumieri is being propagated by one of our nurserymen, which will surely take a prominent place in our exotic shrubbery. The flowers of this family of shrubs are very pretty, borne in racemes, and followed by clusters of fruits the size and color of the yellow Currants of the East. P. D. B.

F. & F. NURSERY, Springfield, N. J.—Spring 1910 Trade List of Deciduous Trees and Shrubs, Evergreens, Roses, Hardy Herbaceous Perennials and Fruits.

BLOODGOOD NURSERIES, Flushing, L. I., N. Y.—Spring 1910 Price List of Deciduous Trees, Shrubs, Vines, Evergreens, Roses, Herbaceous Plants and Fruit Trees.

J. T. LOVETT, Monmouth Nurseries, Little Silver, N. J.—Catalog of Hardy Perennials, Shrubs, Vines, Roses, Hardy Plants, Evergreen Trees, Small Fruits and Garden Roots. The catalog embraces 80 pages and is profusely illustrated with half-tones, many of them of varieties very seldom found in other catalogs.

J. BLAAUW & CO., Boskoop, Holland: New York representative, John Radder, c/o Knauth, Nachod & Kuhne, 13 William Street.—General Catalog of Shrubs, Vines, Evergreens, Bulbs, Roots, Rhododendrons, Roses, Trees and Fruits. This is a 40-page publication, well arranged and illustrated with several fine full page plates.

FRANK E. RUE, Peoria, Ill.—General Catalog for 1910 of Vegetable and Flower Seeds, Flower and Bedding Plants, Foliage and Decorative Plants, Summer Flowering Bulbs and Roots, Nursery Stock, Poultry Supplies, Fertilizers, Garden Tools and Requisites. The catalog contains 62 pages and is profusely illustrated.

BROOKLAWN CONSERVATORIES (Julius Reck), Bridgeport, Conn.—A neat little 8 pp. and cover catalog, containing a list of plant offerings which can readily be made by all enterprising florists who have a little land surrounding their greenhouses. The putting forth of an ad. of this character is good advertising and money well spent.

S. L. LAMBERD CO., 111-15 Light St., Baltimore, Md.—Catalog of Seeds and Farm Machinery, covering Flower and vegetable Seeds, Field and Grass Seeds, Fertilizers, Poultry Supplies, Garden Tools and Implements, and a very extended line of Field, Garden and Farm Machinery. The publication contains 128 pages and appears within handsome lithographic covers.

EASTERN NURSERIES, Jamaica Plain, Mass., H. S. Dawson, mgr.—"Everything for the Hardy Garden." A well-prepared catalog of perennials, vines, roses, etc. The book is well printed and illustrated with half-tones of high quality. On the cover appears a large half-tone reproduction of a formal garden. From the same concern we have a wholesale Trade List of Evergreens, Trees and Shrubs, Vines and Climbing Plants, and Hardy Herbaceous Plants.

WELCH BROS., 226 Devonshire St., Boston, Mass.—Wholesale Price List of Florists' Supplies. This is a 48-page publication printed on fine stock and profusely illustrated. The articles catalogued are those usually in demand by florists, and cover Wire Designs of all kinds, Cemetery Goods, Florists' Vases, Plants, Plant Holders, Sprinklers, Sprayers, Ribbon Cabinets, Ribbons, Wheat Sheaves, Prepared Wreaths, Cypresses, Leaves, Decorative Letters, Shipping and other Boxes, Glassware, Metallic and Wax Flower Designs, Baskets and the host of other things necessary to conduct a florist business. A copy of this catalog should be in the hands of all florists located within the territory catered to by this firm.

S. J. REUTER & SON, Inc., Westbury, R. I.—Price List for 1910 of Roses, Carnations and Chrysanthemums. This is a 12-page publication, printed on good paper and well illustrated with fine half-tones. In Roses, the standard forcing sorts are illustrated, and it is explained that all cuttings are taken from thrifty, strong-growing, grafted plants. Nothing but the best English Manetti is used in the grafting. The list of Carnations includes the best introductions of the year, such as Dorothy Gordon, Mrs. C. W. Ward, Sangamo, Alma Ward, Mary Tolman, Admiralty, Shasta, Conquest and Pink Delight, besides the best of the standard varieties. In Chrysanthemums, several of last Fall's novelties are listed, as well as the most popular in standard varieties. The cover of the catalog is ornamented with a splendid reproduction of Rose White Killarney and a Winter view of three of the company's ranges at Westbury, R. I.

ANNUAL SPRING TRADE EDITION

March 19, 1910

OUR first Spring Trade Edition was issued in March, 1890, consequently this forthcoming issue will be our twenty-first—and every one a success.

Despite competition and the business changes of a score of years, our Spring Trade Edition has always met with the hearty support of our advertisers. Years ago we called it our

Spring Trade, Sale, Mart and Exchange Number

BECAUSE IT CLEARED UP STOCKS

From now on, hundreds of growers have surplus stock to dispose of, while other thousands of growers are waiting to buy from these advertisers. Therefore,

If you have any Stock to Sell } *Try This Issue*
If you have to Buy any Stock }

Advertisements should reach us by or before March 16—that's next Wednesday week. Try an inch, a column or page advertisement, according to your requirements.

"JUDICIOUS ADVERTISING
PAYS"

Pubrs. THE FLORISTS' EXCHANGE

New York

Chairman W. F. Sheridan of the New York Florists' Club dinner committee, says he hopes all members of the Club who intend to be present at the dinner on March 17 will notify him as soon as possible, in order that satisfactory seating arrangements may be made. Judging from the many requests for seats in the hands of the committee, the affair will be the "best ever."

In speaking of the condition of the flower market at the present time, one wholesaler remarked that "ten cases of Sapolio would not be sufficient to clean up the street."

R. Scheuermann, a jeweler of Madison, N. J., has in his store window the cups donated by Moore, Hentz & Nash, to be awarded to the exhibitor of the best six Roses at the coming show of the American Rose Society, March 16. The cup is valued at \$50, and it is now up to every Rose grower to look over his stock and put up an exhibit. See schedule of premiums for requirements.

Ford Bros. are offering a fine lot of Candytuft plants in 4-in. pots, in full bloom. These should make desirable plants for many purposes, as the keeping qualities of the flower are well known.

The warm rainy weather has been quite a factor in the cut flower business the past week, and to it is attributed much of the slump that is now noticeable in all lines of cut flowers. The market is also in "bad" owing to the fact that many growers who are unable to find an outlet in Philadelphia are sending their stock to this city.

Fleischmann's store in the Hudson Terminal Building is now open for business.

In the store of the Manhattan Flower Market on 28th st. some cut branches of Lilac were seen last week, which had been brought from Holland by a nursery agent, with the idea of testing the shipping qualities. Judging from the appearance of the samples after being cut two weeks, it would look as though New York retailers will be handling Holland grown Lilac next year.

James Park, a well-known figure in florist circles, and for several years superintendent for Thomas A. Edison, died in Brooklyn, Feb. 19.

Doubleday, Page & Co., the well-known New York publishers are to remove their

plant to Garden City. In the plans covering new buildings to be erected, and the lay-out of the grounds, there are some notable horticultural features. It is understood that one or two greenhouses will be erected on the grounds.

James Gall, widely known in this country and in Europe as a designer of public parks, and who rendered valuable assistance in the laying-out of Central Park and Prospect Park, died on Feb. 19 at his home, Preakness, near Paterson, N. J., of ailments incident to old age.

John F. Sharkey has had a new sign hung in front of his store on E. 28th st., which announces that he is a wholesale and retail florist.

Alex. McConnell has been taking advantage of the mild weather, to make a fine display of potted bulbous stock, and sprays of Lilac and Forsythia outside his store on Fifth Ave. This display is very interesting and causes the passer-by to stop to look at the Spring flowers.

An air of mystery pervades the atmosphere around The Flower Shop, 136 W. 42d st. The store is closed, no stock in the ice box, while the window is filled with cut flower boxes of all descriptions.

M. A. Bowe continues to be busy. His store window was attractively decorated this week with Orchids and Acacia, as well as Shamrocks, Carnations and other good things in the floral line.

Extensive alterations are being made in the store of Fleischmann, corner of Fifth ave. and 42d st., which when completed will allow a large part of the store to be occupied by the Holland Art Galleries.

Thos. Young, Jr. has been featuring single Violets, attractively put up in gilt baskets, the handles of which were decorated with ribboa to match the flowers.

Thorley's House of Flowers was this week tastily decorated with yellow Callas and purple Lilac plants, while at the entrance to the store small boxes of Crocus in bloom gave a dainty touch of Spring to the surroundings.

Poeticus ornatus is now on the market.

Phil Kessler is handling some fine sprays of Deutzia gracilis.

Baby Rambler Rose plants in full bloom have made their appearance in the windows of nearly all the uptown stores; they are exceptionally well budded, and

add considerably to the decorative features of windows.

P. McKenney has a decided novelty in his store window at 42d st. and Fifth ave. It is a globe containing a natural Killarney Rose, preserved in cologne and alcohol, the wonder of which is how so large a flower could have been passed through the small neck of the globe. This novelty retails at about \$15.

Chas. H. Totty of Madison, N. J., has been elected corresponding member for America of the National Chrysanthemum Society of England.

Pittsburgh

The past week's trade was not over brisk. Stock was plentiful and prices were very changeable. Carnation by the thousand went as low as \$12 to \$15, and Rose at correspondingly low prices. Lilies range from 8c. to 12c. with a fair demand. Violets are very cheap. Bulbous stock is abundant, particularly Tulips. Weather conditions have changed somewhat; March came in like a lamb, thermometer close to 60° and rain, good weather for handling plants and lots of them are being offered, but go slow. Good pot plants of Hyacinths, Tulips and Daffodils are in most demand.

The rain and sudden thaw caused our rivers to rise and reach flood stage, which will do some damage to business houses in the low district of the city. W. C. Beckert, the seedsman, whose place is near the Allegheny River has water in the cellar, but will not likely get it in the store room this time, unless heavy rains should continue to fall. Mr. Beckert who has for years past suffered considerable loss from high rivers, the water reaching a height of about 6 ft. in the store room, flooding counters, shelving, etc., has made a great improvement the past year to avoid these losses. His show cases and all wall cases, bins, etc. are so arranged that they can be drawn up towards the ceiling in very short time, away from all danger of any possible flood.

It is not often that a city railway company sues an individual or firm for damage done to their cars by a vehicle running into them and causing damage; nine times out of ten it is the reverse. The Pittsburgh Railway Co. filed suit against Randolph & McClements, the well-known East End florists, asking \$1000 damages.

It is alleged that while a car was passing along Center ave. E. E., it was struck by a large automobile owned by the firm and damaged the car to the extent of \$1000.

Mrs. Victor Bergman, wife of Victor Bergman of Chicago, is visiting her parents Mr. and Mrs. Gustavus Ludwig, on the North Side.

James Moore, supt. of the North Side parks, has the sympathy of his many friends in the loss of his father, John Moore, who died during the week at a ripe old age.

Peter Demas, of the Florists' Exchange wholesale cut flower house, contemplates a trip to his old home in Greece, where he expects to have a royal time.

E. C. REINEMAN.

Cincinnati

Lent is still King, and while business is fairly good we could do considerably more. Prices are continuing very fair considering the quantity of stock that is coming in. The only real scarce article now is white Roses; these are in demand for funerals more especially. At the present writing (Feb. 28) the Ohio River is coming up very fast, having risen about 8 ft. in the past 24 hours; rain commenced Saturday night and continued over Sunday, dissolving the large amount of snow which still remained. The back waters will undoubtedly cause considerable damage to the market gardeners in the Mill Creek Valley, which it does every year about this time; the florists will not be affected much unless the water passes 55 to 58 ft.; when it reaches this state it is apt to cause some trouble by putting out the fires in the boilers.

Lester Beason of Indianapolis was in the city Feb. 27. Joe Maunders, who bought Mr. Benson's place in Newport, Ky., I understand, has now bought the real estate in connection with the store, which gives him full charge. Mr. Benson reports doing a good business in Indianapolis.

For prices see above

Baby Rambler Roses

BABY DOROTHY. The same in habit as Baby Rambler, but the color of the flowers is similar to Dorothy Perkins. It makes an excellent pot plant for forcing. Price for strong, field-grown plants, 85c. for 5, \$16.00 per 100.

CATHERINE SEMETH. A White Baby Rambler Rose, larger and better flowers than the type. White with yellowish center. 85c. for 5, \$15.00 per 100.

MRS. WM. H. CUTBUSH. Color intense crimson and exceptionally free-flowering. 85c. for 5, \$15.00 per 100.

MME. NOBERT LEVAVASSEUR (Baby Rambler). Strong, field-grown plants. 85c. for 5, \$15.00 per 100.

THE TREE BABY RAMBLER. (Grown as a Standard.) The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. 40c. each, \$3.75 for 10, \$35.00 per 100.

BABY DOROTHY. (Grown as a Standard.) For description, see above. 75c. each, \$6.25 for 10, \$60.00 per 100.

Something New in Roses for Florists Half Standard Baby Ramblers

These are Baby Ramblers, grown on stems or standards about one and half feet high, and will be a novelty for your trade you cannot profitably overlook. They are offered for the first time in this country in the following varieties:

BABY DOROTHY (Half standard). Deep pink. 60c. each, \$6.00 per doz., \$45.00 per 100.

BABY RAMBLER (Half standard). Crimson. 45c. each, \$4.50 per doz., \$35.00 per 100.

BABY CATHERINE SEMETH (Half standard). White. 45c. each, \$4.50 per doz., \$35.00 per 100.

BABY "STARS AND STRIPES" (Half standard). White and red grafted on the same plant; most attractive. 50c. each, \$5.00 per doz., \$40.00 per 100.

Ramblers and Other Climbing Roses

PAUL'S CARMINÉ PILLAR. Flowers large and free; color rosy carmine. Two-year-old, field grown. 85c. for 5, \$15.00 per 100.

CRIMSON RAMBLER. American Grown. The only stock for forcing. Large heavy plants, two years old, mossed and packed in bundles of 10, 3 to 4 feet, \$1.25 for 10, \$12.00 per 100; 4 to 5 feet, \$1.75 for 10, \$15.00 per 100; 5 to 6 feet, extra heavy, \$2.25 for 10, \$20.00 per 100.

DOROTHY PERKINS. Lovely shell-pink color. \$1.25 for 10, \$12.00 per 100.

TAUSENDSCHON. The new Rambler Rose. The name translated means a "thousand beauties." Color beautiful rose, shading to pink. \$2.25 for 10, \$20.00 per 100.

LADY GAY. A seedling from the popular Crimson Rambler, which it resembles in habit and general effect. The flowers are of a delicate cherry-pink color, which fades to soft white. Strong plants, field-grown, 4 to 5 feet. \$1.75 for 10, \$15.00 per 100.

Flower of Fairfield

This variety is a sport from the beautiful Crimson Rambler, is similar in color, more brilliant and lasting than the old favorite. It also possesses the further advantage over the Crimson Rambler in the fact that it flowers profusely on the young wood the first year. Flower of Fairfield is a vigorous grower and free bloomer. It starts to bloom early in the Spring and continues until late in the Autumn. It is rightly termed "perpetual blooming." 40c. each, \$3.50 for 10, \$30.00 per 100.

Veilchenblau (Violet-Blue)

It has long been the desire of rosarians to secure a blue Rose. In Veilchenblau we have practically approached this color. The steel-blue flowers of this new Rose appear in large clusters, are semi-double, of medium size and keep in bloom a long time. The showy yellow stamens contrasting with the blue flower, give the whole a striking appearance. 60c. each, \$5.75 for 10, \$55.00 per 100.

Coming Exhibitions

New York, March 16-18, 1910.—Exhibition of the American Rose Society at the American Museum of Natural History, 77th st. and Central Park West. Secretary, Benjamin Hammond, Fishkill-on-Hudson, N. Y.

Boston, Mass., May 26-30, 1910.—Great Exhibition of Orchids and other plants by the Massachusetts Horticultural Society. Secretary, William P. Rich.

Indianapolis

From present indications there should be a plentiful supply of Lilies and other seasonable plants for Easter. The shortage of the past few years in Lilies has taught the growers to discount the usual loss in this line in making estimates.

E. J. Fancourt of Pennock-Meehan Co., Philadelphia, waited on the trade in Indianapolis last week. He has a fine line and reports business good everywhere.

Harry Green of Bayersdorfer's, Philadelphia, was here on his regular trip. John Bertermann has purchased a new auto and is learning the art of chauffeur.

Tomlinson Hall Market reports a busy week. Better weather permitted the marketing of more goods.

Fred Kiel of Bertermann's is on the sick list.

Mrs. Braendlein is cutting fancy Mignonette.

The E. G. Hill Co. is sending nice Callas to this city.

Dave Kelly of Franklin is a weekly visitor.

Miss Vesey of Fort Wayne is spending a little time at the Indianapolis Art Institute.

Ed. Rankin is preparing for a number of improvements at his College ave. establishment.

It is sincerely hoped that March will take on the form of a lion in business quarters and establish a new record for the initial Spring month. I. B.

St. Louis

E. J. Fancourt, representing S. S. Pennock-Meehan Co., of Philadelphia, called on the trade last week.

E. W. Guy and Henry Emmunds of Belleville made friendly calls last week and report fairly good trade in their line.

Prof. C. Stuart Goger of the University of Missouri says he has had successful results experimenting with radium in changing color and species of flowers and plants; he planted several seeds of Oats with tubes of radium and they grew twice as fast as without.

Louis A. Geiger is now with Grimm & Gorley having given up his store on Maryland ave. He has taken charge of the cut flower department at the Washington ave. store.

C. De Wever made a business trip to Chicago last week; he is getting ready to enter into the wholesale plant and bulb importing business.

George Walbart and Mrs. M. M. Ayers on Grand ave. are showing a lot of fine blooming plants and cut stock. They have felt very little effects of Lent and business is running along as usual with them.

C. C. Sanders, Schray and Beyer will be well supplied with blooming plants for Easter business. A. Jablonsky has a fine lot of Easter Lilies coming on just right for Easter.

Mr. and Mrs. Charlie Young celebrated the second anniversary of their marriage on Washington's Birthday. Mr. Young is one of the officers of the firm of C. Young & Sons Co.

A meeting was held at Smith's Wholesale House on Thursday, Feb. 24, of a committee of the Florists' Club on advertising through the Club. Mr. De Wever, chairman, called the meeting, to which six of the seven responded, and drew up a report for the next Club meeting.

A meeting of retailers has been called at the Washington Hotel for Wednesday, March 2. The object of this meeting is to protect the retailers against the sale of red Violets in the wholesale district, as they say things have been going too strong of late. A report of this meeting will be published in the next issue.

The Florists' Club will hold its regular meeting next Thursday afternoon, March 10 in Odd Fellows' Building; it's going to be an important one and no member can afford to miss it.

ST. PATRICK.

ARTHUR T. BODDINGTON

Our arrangements for careful packing and prompt shipment are perfect

Price List :: Easter 1910

COME AND SEE OUR STOCK

Any Buyer seeking quality will be well repaid by inspecting our large stock of Crimson and Pink Ramblers, Hydrangeas, Lilies, Azaleas, Rhododendrons, Spiraeas, etc., etc.

The early Easter will make absolutely no difference to us. Our stock is excellent and timed just right for Easter. Send us your orders at once to insure satisfaction.

Lilies

Our stock is exceptionally good this year. Plants from 4 to 8 blooms...at 12c. per bloom Made up pans from 12 to 20 blooms at 12c. per bloom Plants with less than 4 blooms, at 15c. per bloom

Azaleas

Our stock of Azaleas is the largest and finest we have ever had and includes: Van der Crayssen, Vervaeckena, Emp. of India, Emp. of Brazil, Niobe, Bernard Andrea Alba, Prof. Wolters, etc., etc., at 75c., \$1, \$1.25, \$1.50, \$2, \$2.50, \$3, \$3.50, \$4, \$5, \$6, \$7.50 and \$10 each. Pyramid Azaleas, very fine, at \$3, \$3.50 and \$4 each. Azalea Mollis, Anthony Koster, the best yellow, at \$15 and \$18 per doz. Azalea Mollis Ass't, very large plants, at \$2.50, \$3 and \$3.50 each. Small Azaleas for Basket Work, at \$4 per doz., \$30 per 100.

Crimson Rambler Roses

These plants are unusually fine and will be just right for Easter. 6-in. and 7-in. pots...at \$1, \$1.25 and \$1.50 each 8-in. pots at \$2 and \$2.50 each Plants trained in fan and globular shapes, extra fine, at \$2, \$2.50, \$3, \$3.50, \$4, \$5 and \$6 each.

Pink Rambler Roses

Lady Gay and Dorothy Perkins In great condition, trained into fan, globular and pyramidal shapes. At \$1.25, \$1.50, \$2, \$2.50, \$3, \$3.50, \$4, \$5 and \$6 each. Special Ball Shapes at \$1.50, \$2, \$2.50, \$3 and \$3.50 each Special Wire Fan Shapes...at \$3 and \$3.50 each Standard Lady Gay Umbrella Shape...\$3.50 each We want to call your attention to this Special Standard Lady Gay Umbrella which we have in exceptionally fine condition. This, we believe, cannot be duplicated anywhere.

Tausendschon (New)

"Thousand Beauties"

This was our finest Climber last Easter and this year the plants are still better. We cannot recommend the Tausendschon Rambler too highly. Strong plants in 6-in. and 7-in. pots, at \$1, \$1.25 and \$1.50 each. Trained plants, Fan, Globular and Pyramidal Shapes, at \$2, \$2.50, \$3, \$3.50, \$4 and \$5 each.

Baby Rambler Standards

Exceptionally fine plants, 3 to 5 foot stems, at \$1, \$1.25, \$1.50, \$2 and \$2.50 each.

White Baby Rambler Standards

At \$1, \$1.25 and \$1.60 each.

Standard Double-Budded White and Red Baby Rambler on Same Plant

At \$1.50 each.

Baby Ramblers

Good strong stock, well flowered, at \$3, \$6 and \$9 per doz.

Hiawatha

The best of its color.

6-in. and 7-in. pots, trained in globular and fan shapes, at \$1.25, \$1.50, \$2, \$2.50 and \$3 each.

Mrs. Cutbush (New)

Pink Baby Rambler

This is a good one, in 6-in. pots, at \$6 and \$9 per doz.

Baby Dorothy (New)

Pink Baby Rambler very similar to Mrs. Cutbush.

4-in. and 4 1/2-in. pots.....at \$4 per doz. 5-in. pots at \$6 per doz. 6-in. pots at \$9 per doz.

Hybrid Roses

We have an unusually large stock of Hybrids which will be just right for Easter; all the best varieties, including: Richmond, Kaiserin, Mrs. Henshaw, Killarney, etc., at \$6 and \$9 per doz. Magna Charta, very fine, at \$9, \$12, \$15 and \$18 per doz.

Hydrangeas

At \$6, \$9 and \$12 per doz. Large plants at \$1.50, \$2 and \$2.50 each. Hydrangea Otaksa, Standard (New), at \$2, \$2.50 and \$3 each.

Rhododendrons

Shapely, well-budded plants, including all the best varieties, at \$1.50, \$2, \$2.50, \$3, \$3.50 and \$4 each. A few larger plants in tubs, very handsome, at \$5 and \$6 each.

Rhododendron Pink Pearl (NEW)

The most beautiful of all the Rhododendrons, at \$2.50, \$3, \$3.50 and \$4 each.

Lily of the Valley

5-in. pots at \$6 per doz. 6-in. pots at \$9 per doz.

Bougainvillea Glabra Sanderiana

Magnificent plants, exceptionally well flowered, at \$3.50, \$4, \$5, \$6, \$7.50 and \$10 each.

Genistas

A grand stock, grown cool and just right for Easter, at \$2, \$3, \$4, \$5, \$6, \$9, \$12 and \$16 per doz.

Spiraea Gladstone

Our stock is in superb condition.

6-in. pots at 50c. each 7-in. pots at 75c. each 8-in. pots, made up at \$1 each 9 and 10-in. tubs, made up...at \$1.50 and \$2 each

Pink Spiraea

Queen Alexandra, very beautiful

6-in. pots at \$9 per doz.

Double Daisy, Queen Alexandra

Well grown and well flowered. 4-in. pots at \$2.50 per doz. 5-in. pots at \$4 per doz. 6-in. pots, very fine.....at \$6 and \$9 per doz.

Marguerites

Very well flowered, 6-in. pots...at \$4 per doz.

Oranges

5-in. and 6-in. pots, 4 to 8 fruits, at 50c., 75c., \$1 and \$1.50 each.

Nephrolepis Scottii

6-in. pots at \$6 and \$9 per doz. 8-in. pans at \$12 per doz. 10-in. pans at \$1.50 and \$2 each

Nephrolepis Todeaoides

The London Fern.

We have a large stock for growing on, in 2-in. pots, at \$5 per 100, \$45 per 1000. 6-in. pots at \$6 and \$9 per doz. 11-in. tubs at \$2.50 each

Nephrolepis Amerpohli

The Philadelphia Lace Fern.

5-in. and 6-in. pots at \$6 and \$9 per doz.

Nephrolepis Whitmani

9-in. pots\$2 each

Nephrolepis Scholzeli

Ready Now.

2 1/4-in. pots at \$8 per 100, \$75 per 1000

Asparagus Plumosus

2-in. pots at \$4 per 100.

Areca Lutescens

Exceptionally fine stock.

5-in. pots at \$7.50 and \$9 per doz.

Dracaena Massangeana

Perfect plants, 6-in. pots, at \$18 and \$24 per doz.

Dracaena Fragrans

6-in. pots at \$6 and \$9 per doz.

Crotons

We have the largest stock of Crotons in America. Well colored plants.

4-in. pots at \$25 per 100 5-in. pots at \$50 per 100 6-in. pots at \$75 per 100 Large plants at \$1, \$1.25, \$1.60 and \$2 each Made up plants\$2.50 to \$10 each

Pandanus Veitchii

Well colored

4-in. pots\$5 per doz., \$40 per 100

English Hawthorn

8-in. pots, 3 1/2 to 4 feet tall.....at \$2 each

Standard Prunus (Plum)

Very handsome plants at \$2 each

Wistaria (Blue)

at \$1.50 and \$2 each.

Flowering Apples and Almonds

at \$1.60 each

Ficus Pandurata

6-in. pots, 24 to 36 inches high, at \$2, \$2.50 and \$3 each.

Larger plants at \$3.50, \$4 and \$5 each Branch Plants at \$2.50, \$3, \$3.50 and \$4 each

Begonia Gloire de Lorraine

We claim to have the largest and finest stock of this grand Xmas plant in America. All plants propagated from leaves and twice shifted. Shipped from 2 1/2-in. pots, at \$16 per 100, \$140 per 1000.

Special prices on lots of 5000 plants, or over.

An early Easter makes no difference to us, we are always ready

It will help us, and you, if we have your Easter order early

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co. Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the officers is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12
Boston: Robert Cameron, Cambridge, Mass.
Philadelphia: A. H. Secker, 306 Wood Building, No. 34 So. 16th St.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Order; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

Our 1910 Novelty Edition

That our effort to produce a representative Novelty and Specialty edition were not wholly in vain has been attested during the present week by the many kind letters and personal assurances received this week.

It was an expensive undertaking and involved much additional labor from editors, compositors, proof readers, pressmen, binders and so on all the way down to the office boys, but as all entered into the spirit of the work with a cheerful heart, and the outcome has been most successful, the hours of extra labor are all forgotten in satisfaction with the results accomplished.

Another year it is to be hoped greater time can be given to the preparation of the Novelty edition to the end that the finished product will be more complete.

We are thankful to our friends for their words of commendation and feel encouraged to persevere.

The Postal Deficit

The Postmaster-General is back again in the fray over second-class mail matter. He insists that the magazines, which are carried at a small rate, are responsible for the deficit that turns up annually in the Post Office Department. If he could raise the rates sufficiently on this class of mail matter he is certain that he could make that deficit disappear.

So he could if he were able to raise the rates of letter postage, but no one would listen to any such a scheme.

But there is one course that the Government can pursue that would bring in a great revenue without disturbing existing policies and at the same time would benefit the public very materially. That is the enactment by Congress of a comprehensive law establishing an up-to-date postal package system, such as every enlightened country save the United States has in operation.

But the bursting-with-wealth express companies will not permit of this boon.

[The above appeared as an editorial in the Philadelphia Inquirer, the third largest paper (in point of circulation) in the United States. Passing strange, is it not, that our Congressmen and Senators will not recognize the will of the people.—En.]

ASTILBE ARENDSI.—This handsome decorative novelty is a class of Thunbergii with hybrids of Astilbe Davidi and Japonica compacta—astilboides. It is very vigorous in habit, growing to a height of somewhat over three feet, and bears magnificent panicles ranging in color from pure white to delicate cream, and from lilac pink to purplish pink. The time of flowering is rather late, July or August. While not suited for pot culture, Astilbe Arendsi is valuable as a cut flower, and is especially suited for decorations and for potting. It was originated by Georg Arends, Ronsdorf, Germany.—*Bindekunst*.

The Florist as a Nurseryman and Seedsmen

Florists who have never been in one of our greater cities in seasons of glut can have but a faint idea of the sacrifice made of stock at such times. Those florists who consign to these cities are, on the other hand, painfully aware of the fact through their greatly lessened returns at such times.

It is by reason of these gluts and the all too often overstocked condition of the city markets that we advocate the policy of the grower becoming seedsmen and nurserymen as well. There are a sufficient number of growers of flowers for market stock to supply our large marts for years to come.

It should be apparent to every florist who has a possible home market that he should exert himself in every way to develop this feature of his trade, the possibilities of which are far greater than the majority have as yet given heed to.

There is no good reason why the florist of the towns and villages cannot also be a seedsmen and a nurseryman. Reputable growers can make advantageous connections with representative firms in both of these divisions, and thus, with three lines to handle instead of one, ensure for themselves a better livelihood as well as advance the day when it will be considered as much a lack of education to be unable to recognize the ordinary trees and shrubs as it is now so considered to be unable to spell ordinary words.

It will be readily conceded that no one is better fitted to handle seeds and nursery stock than the fairly well-informed florist grower. He already has half the battle won before he starts in for the reason that his business has fitted him for the work.

Good examples are contagious. A florist's establishment with its home grounds tastefully laid out in young trees and shrubs, annuals, perennials and bulbs, with here and there a climbing plant as opportunity offers, and beds of standard stock, such as Roses, Irises, Peonies, each flowering in their season, is a standing temptation to the house owner to improve his own property likewise. Add to this a kitchen garden, wherein the florist may familiarize himself with the seeds he is offering, and the business is well opened.

In addition to the contagious pressure of example in the way of home grounds display, the value and necessity of advertising locally must never be lost sight of.

The writer recalls a certain Summer day when he was visiting a wide-awake florist and nurseryman located near a prosperous watering place. A customer arrives and addresses the proprietor: "Mr. E., I want a hedge put up at once to divide my ground from my neighbor's; his children, servants and family are short-cutting it over my lawn and I want it stopped." Mr. E. was able to show three fine examples of hedges which he maintained for the very purpose, and an order for plants was given on the spot, although the customer was nonplussed because he couldn't get a 5 ft. hedge right off but had to wait for it to grow. In just a few minutes in came another man: "Mr. E., I have a dead tree on my place, and a friend told me you could cover it with greenery and so turn it into an object of beauty." Mr. E. had several varieties of vines climbing up old trees, showed these, pointed out their peculiarities, and—took an order, although this man, as well, with characteristic American push, was disappointed because the specimen shown could not be transplanted bodily and full grown to his own grounds.

This lesson has never been forgotten by the writer. The florist visited is a well-to-do man; he was alive to his possibilities and directed his energies accordingly.

Many recommendations have been made us with regard to the policy we are advocating, among them that florists represent the most reliable seed houses, that they do not carry their stock from one year into another, and that they do not take up with the cheap box trade, which is an objectionable feature at this present time.

There are hundreds, yes, quite likely, several thousand florists throughout the country, who could profit by being seedsmen and nurserymen as well, and their advent into the field would be welcomed by the wholesalers in these lines for the reason that it would mean increased sales and an ever widening market.

We want to see this movement spread until America leads the world in the care and interest shown by the house owner on his own grounds.

The American Rose Society

The complete schedule for the forthcoming exhibition, which is to be held at the American Museum of Natural History, Central Park West and 77th st., March 16 to 18, has been issued, and copies thereof can be had by request made to George V. Nash, New York Botanical Garden, Bronx Park, N. Y.

On page 342 of our issue of Feb. 26 we printed the full schedule of the American Rose Society for this occasion, and on page 305, issue of Feb. 19, that of the Horticultural Society of New York, the Spring show of which Society is to be held in connection with that of the Rose Society.

The prizes offered by both Societies are of a most liberal character, and the number of special prizes announced should make for a lively competition. Practically growers of every variety of Rose have the opportunity to exhibit and make a win.

With the attractive schedule and a grand hall into which thousands of people will pour (for on account of the building being controlled by the city admission will be free), surely, if ever, now is the time and New York City the place in which to bring forward the greatest aggregation of prize winning Roses ever witnessed under one roof.

Confusion in Rose Nomenclature

The German Rose Leuchtfleur (Bright Fire), a last year's novelty [noted in our issue of June 26, 1909—Ed.], is masquerading in America under the name of President Taft. The originator of Bright Fire, the rossian H. Kiese of Vieselbach-Erfurt, Germany, has this to say on the subject, in a recent issue of Moeller's Deutsche Gaertner-Zeitung: "A Dutch firm, which had acquired the sole rights of sale of Leuchtfleur for America, purchasing a considerable quantity of stock, subsequently asked permission to change the name, since the Americans found it difficult to pronounce the German names. I consented, thinking that it was merely a matter of translating the name into English, perhaps into Bright Fire or Beacon, as had been done in the case of the Rose Aennchen Mueller, which was listed in the American catalogs as Anny Mueller. It was only later that I was apprised of the name President Taft. Of course I do not approve of such a change of the German name. A Rose of the first class, whatever its name, will find its place, without a high-sounding appellation. It seems, however, that the name Leuchtfleur has become quickly popular in America, as is shown by the many inquiries which I have received. Of course, I have referred all such to the Dutch firm which has acquired the sole rights of sale for America." The confusion of name is, however, still increased by the fact that there is a Taft Rose different from Leuchtfleur, namely a cross of Mme. Abel Chateau and the Tea Rose Mme. Cusin, originated by Frank Huntsman in Fort Thomas, Ky., and sold by the Hyde Park Rose Co. of Cincinnati. This Taft Rose is designated as a pink Kaiserin. But it does not appear to be suited for early forcing.—*Moeller*.

A New French Rose

ORLEANS-ROSE.—This is a variety of the series of the Polyantha types, a cross of Mme. Norbert Levavasseur with an unnamed variety. It is a profuse bloomer, in habit like Mrs. W. Cutbush, though with the advantage of having its abundant buds on a very straight stem. The flowers are clustered in immense panicles, which rise well above the foliage. The color is a geranium red, tinted like Paul Neyron, with a whitish center. The bush is very vigorous, growing to a height of 18 to 27 inches. The foliage is of a handsome, shining green color; it is entirely hardy and free from cryptogamic maladies. Exceedingly decorative in appearance, this Rose will prove especially effective in mass and in baskets; it is also a fine Rose for forcing and for pot culture. It was awarded a gold medal by the French Society of Horticulture of Orleans and of Loiret. It will be put on the market by Levavasseur & Fils, Orleans, France.—*Revue Horticole*.

Some New German Roses

EISENACH, Wichuraiana Hybrid Tea. The flowers of this handsome novelty are a brilliant red, with white star center, resembling the Crataegus coccinea in color, though the single flowers and the panicles are much larger. The period of flowering is a long one. The variety is exceedingly effective in pyramid or bush form, and is especially adapted for large plantings, and for massing, for sloping or festoon effects, fences, arbors, and for covering rocky ground. The leaves are of medium size, shining, leathery, abundant, and not subject to any disease. The stem is very thorny. Eisenach was originated in the rosaries of H. Kiese & Co., Vieselbach-Erfurt, Germany, who designate it as the most brilliant of the single Wichuraianas.—*Rosenzeitung*.

NYMPHE, cross of Mignonette with Marechal Niel. This interesting novelty is somewhat apart from the ordinary Ramblers, as its origin shows. It is a good grower, often adding more than six feet in one year. The foliage is like that of the Niel. The flowers appear in panicles on the young stems, while those on the old wood come out singly; they have a delicious perfume. The color is pure white, and the flowers, when in full bloom, are quite round, like a snowball; they are also somewhat remontant. The originator is Robert Tuerke, Meissen, Germany, who also promises a white Levavasseur for next year.—*Rosenzeitung*.

See Announcement—on page 414—of our

Spring Trade Edition

To be Issued March 19, 1910.

Obituary

James J. H. Gregory

James John Howard Gregory, the well-known seedman of Marblehead, Mass., died February 20, at his home in that city, in his eighty-third year.

Mr. Gregory was born in Marblehead, November 27, 1827, the son of James and Ruth (Roundy) Gregory. He was educated in the public schools of his native town, afterwards taking a two year's course at the Middlebury Academy, and subsequently entering Amherst College, from which he graduated in 1850. Leaving college he became a school teacher.

His advent into the seed business was almost an accident. He once said of it: "A man wrote to the New England Farmer for a nice Winter Squash; I heard of it and we happened to have one; my father called it, 'Marm Hubbard's Squash,' because we got the seed from an old lady by the name of Hubbard. I sent him some of the seeds; he tried them and so well did he like them that he wrote an article, which was published in a number of papers, describing the good points of the Squash. Before I realized it I was getting orders for this Squash seed from all parts of the United States, and also for many other kinds of seed and soon found I was doing a thriving business."

Mr. Gregory at the outset transacted this business at his home, but later used a small building which his father had used as an office, again later building a 10-ft. addition to it. This small building is still to be seen beside the present large seedhouse. In 1863 he built a store, and from time to time enlarged it, until the business reached the proportions of today. At one time his extensive seed farms, comprising over 400 acres, were located in Middleton, and he made a specialty of growing particular varieties of vegetables, and introducing new varieties.

The deceased was noted for his great charity, and a record of the many kindly acts performed by him would fill a volume. During the famine in India he was especially active, sending from his storehouses large quantities of seed Corn which aided materially in the securing of a new crop for the relief of the starving natives. Only a few years ago, after a period of agricultural depression he sent large quantities of seed gratuitously to the citizens of Nebraska. In 1873, a time of financial depression, he established a bread station in Marblehead, giving away daily many loaves of bread.

Notwithstanding the accumulation of great wealth, Mr. Gregory always lived modestly, and took much pleasure in providing funds for southern colleges, churches and other good works. He has presented to every male member of the graduating classes of the colored colleges of the South a character forming book and established a fund for the continuance of this gift for all future time. Jails, public institutions, and individuals have all experienced his generosity in the distribution of books, the gifts at times amounting to over 3000 volumes per annum. He gave the bell and clock in Abbott Hall tower to his native town, and created a fund for the use of the public library; he also gave many valuable paintings and engravings to the town, and which are now hanging in Abbott Hall.

Mr. Gregory was a most active man, his mind and body ever busy. He was exceedingly well informed, and was a prolific writer on many subjects, including, besides matters horticultural, historic lore, art and geology; he was also noted as a lecturer. His particular hobbies, perhaps, were the collection of Indian relics, and shells, of which he possessed thousands.

He was quite prominent in public life. He served his town as a selectman, a library trustee, a school committeeman, and as a member of a committee to seek a water supply. In 1876 and 1877 he was elected as the joint candidate of the Republican and Prohibitionist party as a State Senator for his district which included the city of Salem and the towns of Beverly and Marblehead. During his period of service he was the cause of bringing the State Board of Agriculture into a higher state of effi-

ciency. For many years he was the vice-president of the Essex County Agricultural Society, and superintendent of the old South Church Sunday school.

Mr. Gregory married (first) Eliza C. Bubier, (second) Mrs. Harriet R. Knight, (third) Sarah Lydia Caswell, the last surviving him. He had no children of his own but adopted four, all of which survive him, Anna (Gregory) Burroughs of Long Hill, Conn.; Laura (Gregory) Coffin of Marblehead, James H. Gregory of United States of Columbia, South America, and Edgar Gregory of Marblehead, who succeeded his father as proprietor of the seed business in 1907, and will continue the business.

George W. Schroyer

George W. Schroyer, the pioneer florist of Lancaster county, Pennsylvania, passed peacefully away at his home, 641 Harrisburg ave., Lancaster, on Tuesday, February 22, in his ninety-second year.

Mr. Schroyer was a son of Col. Christiana Schroyer, a

James J. H. Gregory

man of prominence in his community, and was born at Lewisburg, Union county, on September 9, 1818. He received a primary education in the district school, and in an evening writing school, rounding it out with a short term at a grammar school. When eighteen years old he started out in life to learn the printing trade, obtaining a position on "The Keystone" published at Harrisburg, where he rose to be foreman. While residing in that city he married, in 1845, Miss Annie E. Thompson. In the Fall of the same year he bought "The Spy," a Columbia journal, but sold it two years later, returning to Harrisburg where he remained until 1854 when he removed to Lancaster and worked on well known journals of that day, finally associating himself with the "Daily Evening Express" which started in the Fall of 1856, where he continued in the capacity of foreman until 1862, when he resigned to engage in outdoor pursuits, necessitated by ill health. It was at this stage that he entered the horticultural business. He bought a fruit farm of seven acres, and at first grew fruit and vegetables, but soon changed to the nursery business, becoming Lancaster's pioneer florist. It was on this estate he made his home, and where he died, leaving behind him a flourishing business, in which was associated his son, Harry A. Schroyer, who is also treasurer of the Lancaster City School Board. Mrs. Schroyer died nearly 20 years ago.

Mr. Schroyer was a wonderfully well preserved man, appearing no older than many men at least a score of

years younger, and his keen intellect and memory were unimpaired to the last. His reminiscences of the olden times were most entertaining, and his political stories practically covered the history of the State. He always took great pride in the fact that while he was working as a printer in Harrisburg it fell to his lot to set up the charter for the Pennsylvania Railroad Co. in 1836, and, in recognition of this connection with the great corporation when it was in its infancy, he was invited to the celebration of the fiftieth anniversary of the company in Philadelphia in 1886.

The deceased was highly esteemed in his community, and leaves a host of sorrowing friends.

Francis G. Dwight

Francis G. Dwight, a well-known seedman of Reading, Pa., died at his home in that city on Feb. 26, his 82d birthday anniversary, as the result of a stroke of paralysis. He had been in failing health for three years, during which time he suffered four slight strokes.

Mr. Dwight was born in Reading, and lived there all his life with the exception of four years spent on a farm at Exeter. He was the first seed dealer to start in his city, opening at 512 Penn st. Later he moved to No. 518 on the same street, and still later to No. 843, the latter change made necessary by the increase in his business. Five years ago ill health compelled him to retire from active work. He is survived by a widow, nine children, nineteen grandchildren, and one great-grandchild.

Maurice Butterfield

Maurice Butterfield, a pioneer nurseryman of Lee's Summit, Mo., and one of the organizers of the Missouri State Horticultural Society, died, Feb. 20, in Winona, Tex.

Mr. Butterfield located in Lee's Summit in 1868, and started the Lee's Summit Star Nurseries, which he conducted up to the time of his death. In 1900 he went to Farmington, Mo., and started the business of the Farmington Nurseries and Greenhouses. Recently he went to Texas for the benefit of his health. He is survived by a widow and eight children. He was a member of the F. & A. M., under whose auspices the funeral was held at Farmington.

The Nut Growing Industry

Since the organization of the National Nut Growers' Association, about eight years ago, important and various changes in the industry are noticed. Interest and commercial operations are thus far most active in Southern territory where the Pecan is at home. Interest in other nuts and in other localities, have been increased by the activity in Pecan culture.

However, there is scarcely a section of the country in which at least some of the best known nuts cannot be grown. The Pacific coast has its commercial orchards of English Walnuts and Almonds. Texas gathers and markets native seedling Pecans, while the Southeastern portion of the United States is now moving in the commercial growing of the Pecan.

Ten years ago Southern nurserymen catalogued and sold seedling Pecan trees to considerable extent, but, with the advent of budded and grafted Pecan trees, the business went largely into the hands of specialists who have found ready sale each year for largely increased quantities of stock of this kind. In 1902, fully 95 per cent. of Pecan trees sold by nurserymen were seedlings; five years later, 95 per cent. were budded and grafted stock. While there are several large nut nurseries in Georgia and Louisiana, and numerous smaller ones at many points, yet the greatest activity is found at a few points. Ocean Springs, Miss., was one of the first places to come into notice in this particular and now has half a dozen well-established nurseries following this specialty. There crown grafting seems to be the favored method.

At Monticello, Fla., there are at least six large nurseries and all, with one exception, are making a specialty of Pecans. At this point annular budding is practiced largely. The production of stock at this and several other nearby points has been increasing at the rate of nearly 50 per cent. annually and now stocks are cleaned up earlier than usual. The bulk of this stock is taken by the commercial orchards which are being planted at many points. In southwest Georgia and west Florida the planting this season in commercial orchards alone will reach fully 2500 acres if the supply of trees will permit. Some of the largest orchards, however, are being started in Louisiana.

Recently, the successful top working of Hickory to Pecan in Texas, Louisiana and Georgia, has excited much interest and large operations in this line are being planned. This is a very important movement as it promises to greatly extend the Pecan producing area northward. There seems to be a promising field for the propagation of improved varieties of Hickory and other nuts in sections of the country where the native seedlings are found.

With the increased attention now being given to nuts as food, as they furnish protein and fat in preferable form to meat, it seems probable that nurserymen in all parts of the country may have an important and profitable new line in the production of nut nursery stock.

Poulan, Ga.

DR. J. F. WILSON.

MIDWINTER EXHIBITION

MASSACHUSETTS HORTICULTURAL SOCIETY

BOSTON, MASS., FEB. 26 to 28, 1910

The Midwinter exhibition of the Massachusetts Horticultural Society which opened on Friday, Feb. 25, and continued through Saturday and Sunday, was a great success financially and otherwise. The attendance on Saturday and Sunday was quite satisfactory. This is the first Midwinter exhibition the Society has held and the committees in charge were rather doubtful of its success as the weather is so changeable at this season. The thermometer registered zero around Boston the morning the exhibition opened, nevertheless the exhibitors came thick and fast, and when the doors were thrown open at noon to the public, they saw some of the finest plants and flowers that have been staged for many a day in the different halls.

There were two remarkable groups. One of Orchids, another of Amaryllis.

This exhibition was peculiar in that in days gone by the private gardener predominated, while in this instance florists and growers outnumbered the private gardener. The trade exhibits filled the greater part of the halls and will be seen from the list of awards that the florists captured some of the best prizes.

As one entered the lecture hall attention was at once drawn to a magnificent display of Sweet Peas by William Sim, which covered one end thereof. On the left was a row of well-grown specimen plants of *Erica melanthera*, about four feet high, from Thomas Roland of Nahant. On a long table in front of the Heaths was an exhibit of baskets of flowers from the leading retail florists of Boston. These attracted great attention and were much appreciated. Special mention should be made of Sydney Hoffman's baskets which were especially well done and we cannot understand why they did not come in for a prize.

Right in the middle of the lecture hall was a fine group of flowering plants, including Cyclameos, Primroses, Genistas, etc., interspersed with graceful Palms, from R. & J. Farquhar & Co. This group was very artistically arranged and Mr. James Farquhar deserves much credit for it.

A remarkable group of Amaryllis was shown by Mrs. Montgomery Sears. They were the finest that have ever been shown before the Society and won a well deserved gold medal.

On the right of the hall the Carnations were staged and we have seldom seen a better exhibit anywhere; the blooms came from all over the country.

Roses were rather scarce, but those staged were of excellent quality and much admired. We would feel much pleased if the Rose growers would show as much enthusiasm as the Carnationists.

Julius Roehrs Co. had a nice exhibit of Orchids and A. Zvolanek a display of new varieties of Sweet Peas.

The main hall was devoted to plants in pots arranged for effect. On the steps of the loggia were well grown plants of *Acacia longifolia* from Thomas Roland and *Acacia heterophylla* from Dr. G. C. Weld. Cyclamens were not quite up to the standard of former years, probably it was a little too early for them. Those in competition for Cyclamens were Dr. Weld, Edward J. Mitton of Brookline and Jason Bailey of West Roxbury. On the left was a grand display of flowering and foliage plants from MacMulkin, the florist. This group was not entered in competition.

Primula obconica was very good, especially those from Martin Sullivan. *Primula Kewensis* was especially well grown and these will make a valuable acquisition for

florists. Some splendid specimen plants of *Begonia incarnata*, an improved variety grown by Daniel White, gdr. to Winthrop Ames, were shown. This *Begonia*, when grown as these were should make a good Easter plant; it is well worthy of consideration for that purpose.

The Langwater Gardens' (North Easton) exhibit of Orchids was the largest and most comprehensive we have ever seen in the hall. W. N. Craig, the gardener, deserves much credit for having the courage to take out such a valuable collection in zero weather. We can only mention a few of the choicer things in this unique group which won a well-earned gold medal.

Lælia anceps alba (pure white); *L. a. Schroederæ*, white; *L. a. Schroederiana*, white; *L. a. Dawsoni*, white; *L. a. Stella*, white; *L. a. Sanderiana*, white; *L. a. Amesiana*, rich crimson maroon cup; *L. a. Frotheriana*; *L. a. Winniana* and *L. a. Hillii*.

Cypripedium *Olivia* (tonsum *Nereum*); *C. insigne* *Sanders*; *C. l. Ernestii*; *C. l. Amesianum*; *C. villosum* *margarinum*; *C. Sallieri* *aureum*.

Dendrobium *Luna*; *D. Edithæ*; *D. Euryalis*; *D. X Juno*; *D. X cybele*; *D. X Chrysodiscus*; *D. nobile pulchellum*; *D. n. Virginalis*; *D. n. Balleatum*; *D. n. Nobiliss*; *D. n. Amesiae*; *D. n. majus*.

Cattleya Triana alba and *C. T. Leeana*; *Lælia* *Bella*; *Cattleya* *Eurydice*.

William Edgar Co. of Waverly had a nice group of well-arranged foliage and greenhouse flowering plants, which won third prize.

Mrs. John L. Gardener had some rich *Chorozema* in her group, which contained more flowering plants than the other groups.

A. Leuthy Co. won first prize for a well-arranged group made of some excellent clean well-grown plants.

Bulbous material was not up to the usual standard and there were fewer exhibits than in former years.

There was only one exhibit of *Cinerarias*.

Violets were very few indeed, and there was quite a display. Lily of the Valley was good.

Lager & Hurrell had a good exhibit of Orchids. The exhibits of Orchids from New York and New Jersey growers are very acceptable and are always an attraction.

The awards were as follows:

Awards

Palms—Three varieties not less than eight feet high.—1, William Whitman.

Hard wooded plants (*Azaleas*, *Acacias*, *Ericas*, etc.)—1, Mrs. J. L. Gardner.

Group of flowering and foliage plants covering 100 sq. ft.—1, A. Leuthy & Co.; 2, Mrs. J. L. Gardner; 3, W. E. Edgar.

Primula Kewensis, six plants in not less than seven-inch pots.—1, Mrs. Frederick Ayer; 2, Winthrop Ames; 3, Dr. C. G. Weld.

Primula stellata, six plants in not less than six-inch pots.—1, Mrs. J. L. Gardner; 2, William Whitman.

Primula obconica varieties, six plants in not less than six-inch pots.—1 and 2, William Whitman; 3, Mrs. Frederick Ayer.

Cyclamen, 24 plants in not over seven-inch pots.—1, Dr. C. G. Weld.

Twelve plants in not over seven-inch pots, commercial growers excluded.—1, Jason S. Bailey (gdr. William McGillivray); 2, E. J. Mitton; 3, J. S. Bailey.

Six plants in not over 10-inch pots.—1, Dr. C. G. Weld; 2, E. J. Mitton; 3, J. S. Bailey.

Hyacinths, six plants, not exceeding 10 inches, six bulbs of one distinct variety in each.—1, William Whitman.

Single pan, not exceeding 12 inches, with 10 bulbs of one variety.—1 and 2, Mrs. J. L. Gardner; 3, William Whitman.

Early Tulips, six eight-inch pans, nine bulbs of one distinct variety in each.—1 and 2, William Whitman.

Narcissi, collection of large trumpet varieties.—1, William Whitman; 2, Mrs. J. L. Gardner.

Collection of short trumpet varieties.—1 and 2, William Whitman; 3, Mrs. J. L. Gardner.

General display of Spring bulbous plants, all classes, to be arranged with foliage plants.—1, William Whitman.

Specimen Orchid.—1, Mrs. H. F. Durant (A. Watt, gdr.)

Roses

Twenty-five Killarney.—1, W. H. Elliott.

Twenty-five any other pink varieties.—1, Brant Bros., with Bridesmaid.

Twenty-five White Killarney.—1, W. H. Elliott.

Twenty-five Richmond.—1, Montrose Greenhouses.

Twenty-five any other variety.—1, Brant Bros., with Bride; 2, W. H. Elliott, with Safrano.

Carnations

Fifty white.—1, M. A. Patten, with White Perfection; 2, M. A. Patten, Shasta; 3, Chas. S. Stroud, white 170.

Fifty Enchantress shade pink.—1, S. J. Goddard, Pink Delight; 2, M. A. Patten, May Day; 3, Geo. E. Buxton, Pink Delight.

Fifty Winsor shade pink.—1, M. A. Patten, Winona; 2, M. A. Patten, Winsor; 3, S. J. Goddard, Winsor.

Fifty Lawson shade pink.—1, S. J. Goddard, Helen Goddard.

Fifty scarlet.—1, M. A. Patten, Beacon; 2, C. S. Stroud, Beacon; 3, S. J. Goddard, Beacon.

Fifty crimson.—1, Backer & Co., Harry Fenn; 2, S. J. Goddard, Ruby; 3, M. A. Patten, Sara Nicholson.

Fifty white variegated.—1, A. Roper, Bay State; 2, M. A. Patten, Bay State.

Fifty yellow variegated.—1, M. A. Patten, Hattie Starritt; 2, Backer & Co., 14A.

One hundred, any one variety, with foliage.—1, Peter Fisher.

Vase of 100 blooms, in not less than four varieties, arranged for effect.—1, S. J. Goddard; 2, M. A. Patten.

Fifty blooms of the best new named variety, not in commerce.—1, Winthrop Sargent, with Wodenethe, white.

Miscellaneous

Sweet Peas, six vases, 100 blooms each, distinct varieties.—1, William Sim.

Two vases, 100 blooms each, distinct varieties.—1 and 2, William Sim.

Violets, 100 Princess of Wales.—1, Dobbins & Shannon; 2, John H. Newman & Sons; 3, Estey Bros.

One hundred Lady Hume Campbell.—1, H. F. Woods; 2, E. Bingham; 3, H. F. Calder.

One hundred any other variety.—1, H. F. Calder, Marie Louise; 2, H. F. Calder, Farquhar; 3, H. F. Woods.

Mignonette, 25 spikes.—1, William Nicholson.

Lily of the Valley, 50 sprays.—1, J. H. Leech & Sons; 2, John McFarland; 3, T. J. Grey & Co.

Basket of flowers (for retail florists).—1, Henry R. Comley; 2, Edward MacMulkin; 3, Penn.

Gratuities.—Thomas Roland, display of hard-wooded and other flowering plants; Mrs. Winthrop Ames, display of *Primulas*, *Begonias* and *Ferns*; Mrs. Frederick Ayer, display of *Acacias* and *Ericas*; Dr. C. G. Weld, *Lachenalia Nelsoni*; Edward J. A. Hearn, vase of yellow *Marguerites*; Mrs. J. M. Sears, *Camellia* blooms; William Sim, display of *Violets*; L. E. Small, *Dimorphotheca aurantiaca*; F. H. Houghton, ancient bouquet; Edward MacMulkin, display; Mrs. E. M. Gill, display.

Gold medals.—Langwater Gardens, display of Orchids; Mrs. J. M. Sears, display of hybrid *Amaryllises*.

Silver medals.—Thomas Roland, display of *Erica melanthera*.

First class certificate of merit.—R. & J. Farquhar & Co., display of *Palms*, *Azaleas*, *Primulas* and other Spring flowering plants.

Honorable mention.—Dr. C. G. Weld, seedling *Azaleas*; Montrose Greenhouses, for a dark pink sport from Rose Killarney; Weld Gardens, *Cattleya Schroederæ alba*; Backer & Co., *Carnation Red Princess*; New Hampshire College, collection of seedling *Carnations*; A. Zvolanek, collection of Sweet Peas.

Vote of thanks.—Mrs. Oliver Ames, display of Orchids and cut flowers; William Whitman, *Cattleya Triana*; Julius Roehrs Co., display of Orchids; Lager & Hurrell, display of Orchids; Winthrop Sargent, display of cut *Amaryllises*; Mrs. H. F. Durant, display of miscellaneous plants.

Wm. Sim's Exhibit of Sweet Peas, Winning Silver Medal

At the Midwinter Exhibition of the Massachusetts Horticultural Society

View of Main Hall

Florists' Club of Philadelphia

The monthly meeting of the Florists' Club of Philadelphia on Tuesday, March 1, was "Carnation Night," and was a complete surprise to all who attended, especially as to the number and quality of exhibits. After the usual routine business had been disposed of Secretary Rust read the report on the recent ladies' night, which showed the affair to have been a complete financial success, and efforts will soon be put forth to have another such night. A smoker or dinner for the members is in the air, which it is hoped will materialize after Easter.

Albert M. Herr of Lancaster, Pa., was introduced by President Jos. Heacock and read a very able paper on Carnations, which appears in another column. A discussion followed, which was heartily enjoyed by all present.

Robt. Kift spoke on the valuable exhibit before the Club that evening, then drifted on, giving his ideas as to the keeping qualities of Carnations, also describing a cold air device he had used for a long time, whereby he found his cut flowers kept much better.

The idea expressed by Mr. Herr, in his paper, that too many commission houses were doing business, created some discussion among the wholesale men present, but in explanation Mr. Herr said his thought was merely a "feeler" and tended more to bring out points of interest.

A. Fahrenwald spoke on the antiquated business methods of many growers of his acquaintance, and stated that there was considerable room for improvement in this line. He thought that the idea of tagging flowers was a good one. He also put it up to the retailer to get busy and create a larger demand for flowers among the public. He further stated that he had in mind, for future use, several ideas for the improvement of Rose growing, etc., and complimented the Carnation growers on their energy, push and improvement.

S. S. Pennock thought the tagging proposition mentioned in Mr. Herr's paper only good in theory, and that in practice it would not work out as well as expected; both growers and wholesalers were already more than willing to tell the age of flowers. He advocated the liberal use of fresh air, avoiding draughts, for cut Carnations, lack of which often proved to be the cause of most of the trouble.

Edw. Stroud also agreed in part with the previous speaker, and suggested the elimination of those varieties which were such poor keepers. He believed that those varieties which developed rapidly were the first to go "sleepy" and vice versa, and asked the growers and all others interested in the business not to get discouraged because of the occasional bad slumps into which the market falls, saying that when one was affected all suffered alike.

Chas. Meehan and several other gentlemen took part in the discussion, at the close of which a unanimous vote of thanks was tendered Mr. Herr for his interesting paper.

A. B. Cartledge, Jr., Nelson Geiger and Harvey Collins were nominated for active membership.

Carnation Exhibits

Wm. Swayne, Kennett Square, Pa., vase of light pink seedling, Enchantress; Dorothy, Saml. Batchelor, Jenkintown, Pa., vase of White Perfection. Wm. Kleinheinz, Ogontz, Pa., vase of Norwood. Robt. Craig Co.'s new white seedling. Hy. Eichholz, Waynesboro, Pa., vase of seedling Princess Charming, and Washington, a Lawson colored sport of Enchantress. E. C. Marshall, Kennett Square, Pa., vase of Beacon, Winsor and a white seedling, which was highly commented upon for its fragrance, size of flowers and strength of stem.

S. J. Reuter & Son, Westbury, R. I., vases of Ruby, Sangamo, Pink Delight, and May Day. Chas. B. Herr,

Strasburg, Lancaster Co., Pa., vase of Pink Delight. Milbrook-Lock Greenhouse Co., Whitford, Pa., vase of Georgia. John H. Dadds, Edr. to J. Vanmaker, vase each of Harlowarden, Bay State, White Perfection, Imperial, Enchantress, Winsor and Rose Pink Enchantress.

Jos. Heacock Co., Wynete, Pa., vase of Dorothy Gordon. Robt. Craig Co., Philadelphia, vase of Norwood, their new white seedling. Edw. A. Stroud, Stratford, Pa., vase of Pink Delight and May Day, also a vase each of Schizanthus grandiflora and Stock Princess Alexandra. A. Harvey & Sons, Brandywine, Summit, Pa., vases of May Day, Victory, O. P. Bassett, Snowflake, Winona and Pink Delight.

Conard & Jones Co., West Grove, Pa., had on exhibition its self-watering flower box, which is meeting with great popularity every season; also a plant and some cut blooms of the blue Rose Veilchenblau (Violet blue), (a note concerning which will be found elsewhere in this issue), as well as a vase of cut sprays of American Pillar, a new bright red Wicharalana Hybrid.

All the exhibitors were given a hearty vote of thanks by the Club for the splendid display made, the beauty of which was commented upon by all present.

Rose Veilchenblau (Violet Blue)

The Conard & Jones Co. of West Grove, Pa., showed a plant and some cut blooms of the new "blue" Rose, Veilchenblau, at the exhibition of the Florists' Club of Philadelphia, March 1.

The plant was one of 500 own root cuttings planted in the field June 1 last, from 2½-in. pots, potted Dec. 2, 1908. All the plants bloomed and produced from two to five clusters of flowers. The season of 1909 was one of the driest on record at the place where the plants were grown. The plants had no artificial watering from planting until digging. The growers mention that the original imported budded plants, potted Dec. 1, 1908 with the same treatment as the plant exhibited, did not give a single bloom—all ran to wood. This year these same budded plants all bloomed, but the clusters were not as large as those produced on own root plants potted at the same time and given the same treatment.

New Officers of the Fl. Cl. of Washington, D. C.

Jno. Robertson, president-elect, was born in Perth, Scotland, in 1853, and served eight years in the leading gardens of that country, and afterward two years in England. In 1882 he came to America, and soon after his arrival was selected to fill the position of gardener at the White House, where he remained nine years. A subsequent eight years were served in the local Department of Agriculture. For the past twelve years he has enjoyed success as a retailer and made a host of friends. He conducts a large retail business at 1510 H st., N. W., where he is assisted by his sons.

The vice-president-elect, E. C. Mayberry, is a member of the firm of Mayberry & Hoover, 1339 14th st. He is a native of Pennsylvania, and came to this city in 1859, starting in business at his present location. Mr. Mayberry, like the president, enjoys a wide acquaintance and has a host of friends.

The secretary, re-elected, O. A. C. Oehmler, is a native of Pittsburgh, where he was, in 1887, secretary of the Pittsburgh Florists' Club. He is a man who has traveled from coast to coast, always finding good positions open for his artistic ability. At Butte, Mont., in 1900, he was elected president of the Montana Florists' Club. At present he is chief decorator for Gude Bros. Co.

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

Jubilee Flower Show at Haarlem

The Jubilee Flower Show, organized by the General Bulb Growers' Society of Haarlem, will be opened by H. R. H. Prince Henry of the Netherlands on March 23. The Dutch Minister of Agriculture will be the orator of the day.

The exhibition halls, although very spacious indeed, will prove to be too small to contain the many exhibits for which space has already been requested. Another building has been constructed for plants and flowers, but as the grounds have already been planted with bulbs in Autumn, and are also rather crowded, it will be quite impossible to erect further buildings.

The show has evoked a remarkable enthusiasm all over Holland, and abroad, not only from bulb growers and oursyemen, but also from the public in general. The bulb fields of Holland have always been an attraction to tourists, and a visit to Haarlem and its environs this Spring will be of special interest. The bulb fields are only at their best for a few days; on the contrary, the Haarlem Flower Show is arranged so as to remain in full glory from the opening to the end.

The bulbs planted—representing nearly the number of one million—will regularly succeed each other; the opening week will prove the usefulness of the charming Crocus, and show how "the little Crocus reaches up to catch a sunbeam in his cup." Next comes the stately Hyacinth and its elegant "miniature" offspring, which will be shown in the exhibition grounds in the most modern patterns and most artistic grouping; indeed, a new feature for the decoration of gardens and parks. Daffodils and Narcissus are naturally grouped at the feet of the old trees which are the pride of the Haarlem "wood," the site of the show. From the latter half of April to the end of May glorious Tulips will entrance the visitor, being in such variety as he most probably has never before seen in his life. And, besides, there are numbers of miscellaneous bulbs, rockery plants and herbaceous perennials, flowering trees and shrubs, banks of Rhododendrons and Azaleas along the water side, clipped trees in the French garden—indeed a true floral feast in fairyland.

The temporary shows in buildings already referred to will be held from March 23-31, April 4-12 and May 20-22. The international jury will meet in March and April, under the presidency of Mr. de Marez Oyens, ex-Minister of Commerce, Industry, etc., and now president of the Netherlands Federation of Horticultural Societies.

The Jubilee Flower Show of Haarlem promises to become one of the chief features of the horticultural year.

National Chrysanthemum Society, (Eng.)

At the annual general meeting of this Society, held in London February 7, the following were elected foreign corresponding members: C. H. Totty, America; T. W. Pickett, Australia; and Mons. René Monneja, France.

It was decided to institute a new award, to be known as an "Award for Color," at the shows. Frequently, it had been noted, a variety had been submitted to the floral committee which had a particularly pleasing shade of color, but which did not reach the necessary standard of quality in all points to receive the first-class certificate. From a decorative point of view, however, such flowers were considered worthy of notice, and the award for color will now be made in such cases, in the discretion of the committee.

Group of Flowering and Foliage Plants Covering 100 sq. ft. Staged by A. Leuthy & Co., Roslindale, Mass.

Group of Orchids from Langwater Gardens (Wm. N. Craig, gardener), Winning Gold Medal

At the Midwinter Exhibition of the Massachusetts Horticultural Society

Carnations

A paper read before the Florists' Club of Philadelphia, March 1, 1910, by Albert M. Herr.

The trade papers have been full of Carnations and American Carnation Society matters for the past month, but they seem to be inexhaustible subjects and I will not repeat too much of what has been said.

There seems to be no diminishment in the number of promising novelties year after year; in fact, they seem to increase in number, and increase wonderfully in quality. Those of us who were in Pittsburgh could not help but remark on this feature of the novelties exhibited there. Just what to expect from these novelties from a commercial point of view is a question for the future; no doubt many of them will prove a disappointment to either the originator or the buyer, or both, but what a monotonous world this would be with no disappointments to make us properly appreciate our successes.

In my address at Pittsburgh I recommended that a report be secured, from a number of growers, giving their experience with the introductions of the previous year, these reports to be sent to the secretary of the American Carnation Society and published in pamphlet form each year. The Society, or rather the committee whom I appointed to take up the recommendations in this address, did not see fit to even bring this matter up for discussion. We can hardly ask the trade papers to take it up, but the various florists' clubs might do so, meeting each January and discussing the preceding year's novelties pro and con. The opinions of the commission man and the store man are quite as valuable as those of the grower. We cannot expect to get as good results as the National Society could get, but with a free interchange of opinions we can buy the second year novelties with some assurance of success, and quite a number of the \$50 per 1000 varieties would be hunting buyers at 50c. per 1000. Publicity of failures is needed, and badly needed. Elbert Hubbard says: "Let each individual work toward the betterment of as many other individuals as he possibly can and his financial reward will be money flowing into his pockets as naturally as water flows into a river." How many successes have you had among the novelties bought last season? Don't keep them to yourself! How many failures have you had among the novelties you bought last season? Tell us about them, some one among us may be able to put you on the track of making these failures successes, if not, then neither you nor I want to plant the varieties another season.

Another point I tried to bring out, and which was ignored by my committee, was to have a tag attached to each bunch of flowers giving the date they were cut and the grower's name. This, in the course of time, would be looked for and demanded by the final consumer as a guarantee of good faith. I would like to see a fresh flower law enacted on similar lines to the pure food law, and believe that such a law properly enforced would treble the use of our flowers. Not long ago I was in a store where a good looking vase of Enchantress was in the window. The clerk told me about half the blooms in this vase were flowers from Chicago and that they were three days old, the balance of the vase being fresh flowers from a local grower. Enchantress is not the best of keepers and we all know that the final consumer get-

ting flowers from this vase was foreordained to disappointment. Let our Carnations be sold under a guarantee by the retail man that they have been cut on a certain date, and add a little advice as to the best method of keeping, and many an occasional buyer will be turned into a regular customer; it is not so much the price of flowers that interferes with their sale as the fact that in many cases the buyer receives so little value for the money spent.

Let the grower try and grow such varieties as are known to be good keepers, making this one of his first demands in buying a novelty; then let him grow them properly and tag them as previously suggested, and in the course of time the man who does this will find himself on the high road to success, while the man who does not will be traveling in an opposite direction.

Enchantress and all of its sports can, if well grown, be turned out moderate keepers, but the careless grower should leave them alone. Pink Delight, Victory, White Perfection, all of the Lawson type, Winona and O. P. Bassett, are all good keepers under ordinary culture, and it is this class of varieties that should be planted in quantity; some of the softer, but perhaps more beautiful sorts should be experimented with until you learn to handle them and turn out flowers that will give good satisfaction.

Another point I tried to bring before the Carnation Society was our lack of business methods and ideas. The retailer in our business is perhaps nearest to 1910 business methods, but he has much to learn; the commission man follows along in about 1900 style, and the grower is lagging back somewhere about 1850 style—not that I know much about 1850 business methods, but it will do for a simile, and I believe a correct one. We do not need cultural methods—we have them once a week in four trade papers—but we do sadly need business methods, and we also need someone to come into our societies who has made a study of modern business to tell us something about this end of our work.

There is some money in Carnation growing, in witness whereof just note the modern eight and ten thousand dollar houses going up exclusively for Carnations. The man who has the cash to pay for these structures is all right; the man who builds on credit will have to pass many a weary year before his houses are paid for. I maintain that the modern Carnation establishment cannot produce Carnations at a profit for less than a two-cent average from September 1 to June 1. Keep your own records, charging up every item of expense, interest, taxes, wear and tear, and every item that goes into the production of your Carnation blooms, and see if I am wrong.

When you see retailers paying \$1600 a year rental for their stores, wholesale establishments without number in all of the larger cities, and the grower adding house after house, you naturally conclude each and every one is making money "a la Rockefeller"; analyze the situation carefully and you will find a "triumvirate competing Hades."

I am not up in business methods well enough to suggest a remedy, but I want to give this as an opinion, that there are entirely too many commission houses in the larger centers, and the competition among them is getting to be a bit hard on the grower. The grower, the retail man, the commission man and the final consumer are all component parts of what is and ought to be an immense business. The healthy increase and life of that business needs the encouragement of each of those sections. Get together!

Stock Beauty of Nice

George Wraight, Orange, N. J.

Stock Beauty of Nice

The photograph here reproduced is of the Stock Beauty of Nice grown in a 6" pot. The plant was one of a large number grown by George Wraight, of Orange, N. J., who has grown the variety for some time, and with it has taken a number of prizes. He says that the lot of plants he had this year was even better than those he has previously had.

Society of American Florists

Registration of Rose.

Public notice is hereby given that The Conard & Jones Company of West Grove, Pa., offers for registration the Rose described below. Any person objecting to the registration or to the use of the proposed name, is requested to communicate with the secretary at once. Failing to receive objection to the registration, the name will be made three weeks from this date.

Name: Wm. R. Smith.

Originator: Richard Baggs, of Bridgeton, N. J.; introduced by John Shellen and E. G. Hill.

Raiser's Description: Flowers are large, full and double and most exquisitely formed. The petals are so firm they look like wax, softly curled, colored cream with flesh tint tips, buff yellow base and the center a heart of pink. Perfect buds. The flowers are borne on long, strong stems, just right for making bouquets. Fragrance is delightful.

February 24, 1910.

Tools

FIG. 1.—Tools used in depollination and emasculatation: A, scissors useful in removing small organs; B, self-closing forceps; C, forceps with attachment; D, scissors for severing large organs.

New Methods of Plant Breeding

Bulletin No. 167 of the Bureau of Plant Industry, U. S. Dept. of Agriculture

From the above Bulletin by George W. Oliver, Plant Propagator, we made copious extracts in our issue of Feb. 19, page 300.

We are enabled to present this week illustrations of the tools and devices used by Mr. Oliver in his work and in later issues we will present some of the plates showing results obtained by the author in the course of his experiments.

Tools Required for Depollination and Emasculatation

A small pair of scissors is necessary to remove parts of corollas, stamens, etc., of the different flowers. Those shown in figure 1, A, are more convenient for use on many subjects than the common scissors as they can very readily be adjusted to the various needs with one hand. A medium-sized pair of the ordinary kind of scissors used by plant breeders, with blades 1 inch in length, figure 1, D, is also necessary.

Forceps are indispensable tools. Those forceps in common use would be better adapted to the needs of the plant breeder were they supplied with a flattened pin attached to the handle (see fig. 1, C). This would often prevent the necessity of laying down one tool to take up another while the operator is performing a delicate piece of work and while the eyes are perhaps fixed on a very small object. A needle can be tied on very easily and the combination is an exceedingly useful one. Several pairs of forceps which are self-closing (shown in fig. 1, B) are necessary in such lines of work as pollinating depollinated stigmas of Alfalfas and many other small flowers. These forceps enable the operator to hold a stamen or a sexual column of a small legume while pollinating. It is difficult to perform this work satisfactorily with the fingers.

Watch glasses and small-sized moist chambers are needed to preserve pollen. Tags for keeping records while the seeds are ripening, ranging from one-half inch by three-quarters inch to those of much larger dimensions, are indispensable. Some small-sized camel's-hair brushes, some good white blotting paper torn into small pieces, and a lens should also be included in the kit.

Devices Used in Depollinating Flowers

The contrivances required for the work of depollination by water are inexpensive and easily secured. When the method was first used attachments to the garden hose were employed, but these were found too clumsy and uncertain; moreover, the hose is not always available when it is desired to depollinate flowers in the field. A fairly good substitute is a modification of the common putty bulb (fig. 2, E). This answers the purpose very satisfactorily for large flowers of the Composite, Leguminosae, and other groups. The putty bulb will hold about a pint of water. By unscrewing the spout or ejector, the rubber bag may be quickly filled with water and the ejector replaced in a few seconds. The size of the jet of water is regulated by using a suitable piece of bamboo reed or other contrivance fixed firmly in the tube. When the bulb is full of water a slight pressure with the hand will cause a fairly strong but fine stream of water to be emitted.

It will be found that a very small jet of water is

needed for very small and fragile flowers. For this purpose the various kinds of chip blowers (fig. 2, A and B) and water bulbs sold by dental supply companies suit the plant breeder's needs admirably. These devices are inexpensive, and when many flowers are to be treated at one time several of the chip blowers or water bulbs may be brought into use. As soon as the contents of one are exhausted, and while the bulb is still pressed in the hand, it may be put in a vessel of water; then when the athers are emptied of their contents the first one will be ready to be used again.

There is a still further choice in instruments of this nature in the shape of rubber bulbs (fig. 2, C and D), similar to those used on cameras. A piece of glass tubing can be pushed into one of these; the other end of the tube can be brought to a fine point by heating it in a flame and breaking off the point, leaving an aperture about one-sixteenth inch in diameter. This device does satisfactory work, but the others are preferable.

The Propagation and Culture of Dracaenas

There is not much difficulty in growing good Dracaenas if their requirements, which are no more exacting than those of much commoner plants, are attended to from their infancy until their full development has been attained.

Nearly all Dracaenas are easily propagated from forced growths of hard canes, from root cuttings, from tops inserted in sand, and by mossing old plants. When a large stock is needed, the best method of propagation is that of cutting up old canes into lengths of about an inch, and placing them in the sand, over a good hot-

up what will now be a new plant in as small a pot as will allow of sufficient soil for a start, and place the potted plant in a shaded, glass-covered case; or plunge the pot in the sand in the propagating bench, and shade the foliage until the roots have started to work in the soil.

All the colored Dracaenas make not only handsome specimen plants suitable for Christmas trade, but they also are well adapted for emphasizing window decorations and private house decorations by florists. Smaller plants, plants in 3" or 4" pots, are used in large numbers for the filling of small pans, dishes and baskets, in conjunction with other material. One of the best Dracaenas for the latter kind of work is not a highly colored variety, nor is it in any way like any other Dracaena, being of a loose graceful branching habit. This is *D. Godsefiana*. In color it resembles *Aucuba Japonica*, but, unlike it, is profusely dotted with white. This Dracaena is easily propagated by cuttings made of the tips of the branches, and these inserted in sand over a brisk bottom heat.

From the time Dracaenas are first potted up, and until they are about to be disposed of they should not receive a check, caused either by a lowering of the temperature very many degrees, or from lack of room for the roots to extend. When the plants are soft and making growth rapidly through the Summer, shading on the glass will be necessary; but, later, sunlight will intensify the coloring of the foliage. Many of the Dracaenas can be grown in benches planted in the open soil and potted up in time to be established before sale.

D. M.

Oxydendrum Arboreum

Probably the finest native tree of North America is *Oxydendrum arboreum*, here illustrated. The older botanists classed it among the *Andromedas*. It is commonly known as Sour Wood or Sorrel tree from the acid taste of the foliage, also as the Lily of the Valley tree from the form of the flowers, which are in compound panicles of numerous white bell-shaped flowers, delicately scented. As a tree it grows to a height of twenty to sixty feet, and is represented as growing very slowly, which allows it to be used either as a tree or shrub. As a matter of fact, I have been able to keep it down in shrub form very readily, and have also succeeded in growing it up very rapidly as a tree by high culture. Its principal value is in the high color of the foliage which, when it begins to expand in the Spring, is light green, gradually growing darker as the season advances. There is great variety in shades in different specimens so that by the time the leaves have attained their growth one may find all shades from light to dark green and from bronzy brown to brilliant red with here and there a yellow splash thrown in. But this is not all. I have in mind a tree in our own town, some ten to fifteen feet high, that is now full of rich looking clusters of seed pods which will remain until the foliage begins to expand, so that there is no time in the whole year that it does not make a fine display. Among the ten thousand specimens I have in my nursery all the colors described are well represented, and the several blocks of this fine shrub rival some of the high colored *Crotons* in brilliancy. It often commences to bloom when but a couple of feet in height, and it is one of the easiest of trees to handle.

Hammon, N. J.

WILLIAM F. BASSETT.

Devices

FIG. 2.—Devices used in the depollination of flowers: A and B, chip blowers or water bulbs; C, water bulb with valve at bottom provided with celluloid ejector; D, old rubber bulb with glass tube inserted; E, "putty bulb" with attachment to give a small jet of water.

tom heat; the pieces should be well covered with the sand and well watered; growth will be quickened if the sand is kept continually moist and an even bottom heat kept up. In a few weeks the pieces of cane will have made considerable top growth, and some roots. When the growths are about three inches in length they may either be potted up in small pots and grown right on, or may be severed from the pieces of cane—retain a heel—and then these placed in the sand again as cuttings; and when they in turn are well rooted, potted into small pots, and, as their growth of roots demands, be given larger pots from time to time.

Root cuttings are made from small pieces of the thick fleshy parts of the roots of old plants. These should be placed in sand in the same way, and given treatment such as the hard wood cuttings received; and when they have sent out roots and made a growth of two or three inches potted also in the same way.

When there is on hand some old plants with good tops, the leaves of which are perfect, good specimen plants can be made of them in six months by mossing. Mossing means the making of an incision beginning about an inch and a half below the leaves of the top to be saved, and continuing almost to the leaves, making the incision almost midway to the heart of the stem; then, while the incision is kept open, some clean moss is inserted in the opening and a quantity of the same material is placed around the stem and over the wound, all of which is kept in place by string or raffia wound tightly several times around it. The moss should be kept continually moist, while the soil in which the plant is growing should be kept, from now on, on the dry side. In a few weeks roots will be seen peeping through the moss. When these have shown themselves in force, and begin to work into the surface of the moss, the top may be severed from the old stem by cutting it away just below the moss. Pot

Oxydendrum Arboreum

The Chicago Carnation Co., Joliet, Ill.

On Tuesday, February 22, about 25 of the growers from Chicago and vicinity took advantage of an excursion to visit the plant of the Chicago Carnation Co. at Joliet. The visitors were met at the LaSalle st. station in Chicago by the affable manager, A. T. Pyfer, who escorted them to Joliet. On arrival a sumptuous lunch was served, which was enjoyed and appreciated by all. Only one thing marred the pleasure of the day's outing: a severe snow storm set in which prevailed all day.

The following varieties are all to be found in bloom in the greenhouses: Sangamo, Conquest, Mary Tolman, all the Enchantress varieties, White Perfection, May Day, Daybreak, Lawson, Winona, Winsor, Splendor, Alvina, Aristocrat, Afterglow, O. P. Bassett, Beacon, Victory, Andrew Carnegie and Gov. Deneen (purple). It is hard to state which varieties were most interesting. As one journeyed from one house to another it seemed that each was superior in bloom and condition to the one preceding. The growers were especially impressed with some of the newer varieties. Many of the party had visited the houses previously, and were loud in their expression of surprise at the rapid growth and heavy crop of exceptionally fine flowers that Sangamo was making. Some who visited the place last November said that at that time Sangamo was vastly better than any other variety they ever saw growing. Again in January their opinion was unchanged, and last Tuesday previous opinions were fully confirmed. While the flowers easily average three inches they are nicely filled out, beautiful in form, calyxes showing no sign of splitting, and the stems particularly strong and stiff. A grower who has recently visited most of the large Carnation ranges between here and New York, claimed he did not see anything that appealed so much to him as a "money maker" as Sangamo. Other varieties may bear larger flowers, but as a producer it would be hard to excel.

The variety Mary Tolman is still carrying a very heavy crop of exceptionally large beautiful flowers, deep flesh pink, on very rigid stems, such as would make it seem to be impossible to grow this variety with a weak stem under any conditions. The color is beautiful, a little deeper than Enchantress. It does not fade in the strongest light; the blooms are selling readily in the Chicago market at 5c., and Mr. Pyfer says they are not able to supply the demand at that price, while other varieties drag at 2c. and 3c.

Arriving at the house of Conquest, it seemed a hard matter to get the visitors to look at anything else for awhile. This variety evidently has made friends and admirers. Its long, stiff stems and large Camellia-like flowers of a beautiful combination of light pink overlaid with a deep rose easily command attention. One grower remarked that it was better than Prosperity at its best. It is also a good producer, has an ideal habit and is easy to handle. The leading florists of Chicago are eager to get all the blooms that are consigned to the market, and the blooms command 2c. and 3c. more than other varieties. It is the intention of the company to grow four times as many plants of Conquest next season as they did this, in order to meet the heavy demand for blooms and cuttings. There is a fine house of May Day, and when viewing it one does not need to ask if the variety is a good producer, as it is easily seen that there has been a cutting of very high average. The information was given that up to the present time it had cut two to one of Enchantress.

"What is this large Enchantress?" one grower inquired, examining a fine bench, "or is it Enchantress—it seems to resemble Enchantress in so many ways?" "That is Mrs. Chas. Knopf," was the reply. The va-

House of Carnation Sangamo

Chicago Carnation Co., Joliet, Ill.

riety was then looked over more carefully, and it appealed to the visitors as being quite an improvement over Enchantress.

It would take too long to describe all the varieties grown under the 125,000 square feet of glass that comprise the houses, as they are all equally good, stock well grown and in a clean, healthy condition. The propagating house, however, should be mentioned, where about 300,000 cuttings are in various stages of propagation. It is figured that not more than 2 per cent. of the cuttings will be lost, this loss only due to the breaking of roots from cuttings in taking them out of the sand. One grower who had received rooted cuttings from this house a few days previously said they were the best ever shipped him, and he immediately made arrangements for a further supply.

Under the guidance of Mr. Pyfer and Supt. Olsem the afternoon went all too rapidly, and departure was made with reluctance, the visitors before leaving expressing their appreciation of the courtesies extended.

Hoerber Bros., Des Plaines, Ill.

Hoerber Brothers have decided to begin on the enlargement of their plant at Des Plaines, at a very early date. The contracts have been given to the John C. Moninger Co., who will erect eleven houses, containing the same number of square feet of glass as is contained in the already operated ten houses. They will use the Garland gutters in the new houses. The existing sheds and boiler rooms were built with the intention of adding more houses. The new houses will be to the east of the ten houses, that are each 27½ by 300 ft. This will bring the two large Fairbank boilers directly in the center of the range. There was no mistake made when this place was planned, as the intention of doubling the plant was foremost in the mind of the brothers at the outset. They have been so successful in their first season's business that they feel encouraged to go ahead at once. F. C. Hoerber who has charge of the greenhouses, at Des Plaines says that the only bit of discouragement they

have encountered is the water problem. They are now down 368 feet with the artesian well, striking rock at the depth of 300 ft., but were compelled to abandon the work on account of the severe weather. They, however, have started again with a more powerful drill and feel they must shortly be rewarded by a supply of water. The stock that has been in charge of Frank Bentley at the greenhouses has been excellent, both in quality and quantity, and is handled at the Chicago house by W. F. Hoerber, who has this end in charge.

H. F. A. Lange Estate, Worcester, Mass.

This firm has a store at 294 Main st. and 100,000 sq. ft. of glass at Grant Sq. This firm is the oldest in Worcester, having been established in 1868 by Mr. Lange. The store is in an excellent location and has the advantage of good windows for display. Some excellent trade is being handled and has been good since last Fall. A large quantity of funeral work is being made up. The greenhouses are run under direction of Alfred Lange and all kinds of stock are grown. Sixteen men are employed here and are kept busy on the eleven acres and in the greenhouses. The Roses are off crop at present but show evidences of a good cut coming. Some fine Violets and Carnations are being produced, among the latter are a number of promising seedlings which will be put on the market if the tryout is satisfactory. Some 15,500 Lilies are in good condition for Easter—most of them being just right.

S. C. Briggs, Mount Pleasant, D. C.

One of the most distinct, unique and interesting conditions among local growers is encountered by a visit to the establishment of S. C. Briggs, located in the suburbs of Mount Pleasant, D. C., where five greenhouses of varying proportions well serve to interest the guest, be he amateur or professional.

One of the first, and unusual, features about this place which one soon observes is that while all the flowers are disposed of through the local stores, they are not relied upon to achieve the ends desired, but are grown more as a diversion. Although specialization is somewhat overlooked, Carnations and Orchids make up the major contents of the houses, there being in round numbers 6000 Orchids, 3000 Carnations, and 900 Roses now growing. There is probably, by reason of the surroundings, more hybridizing done here than at any similar range in the District, and at every turn one sees the results, although many standard varieties of the various plants are also grown.

The Carnation house, 32x175 ft., contains, in addition to quite a number of promising seedlings, Enchantress of the three types, and Beacon, all in the pink of perfection. Richmond, Killarney, and My Maryland constitute the stock of the Rose house, in addition to hybrids of Mr. Briggs' own introduction. One of the houses in which a number of specimen plants of Boston Ferns, Palms, etc., are kept, contains a swimming pool 25 by 35 ft., 5 ft. deep, and edged by a beautiful collection of foliage plants. This pool is perfect in every detail and is heated by hot water in a similar manner to the houses.

There are a number of rare and very beautiful Orchids throughout all the houses, but one house, of considerable dimensions, is given up exclusively to their culture. In this collection many fine and expensive plants are represented, from all portions of the world. Eighteen cases of Orchids are expected to arrive in May, with about 80 plants to the case. In one of the greenhouses is a tank of magnificent Japanese goldfish.

Mr. Briggs suffered an attack of pneumonia during the early part of the Winter and soon afterward left

House of Carnation Conquest

Chicago Carnation Co., Joliet, Ill.

Orchid House of S. C. Briggs, Mt. Pleasant, D. C.

for an extended trip through California, from which place he is not expected to return before April 1. L. L. Jenkins is in charge of the houses, and the appearance of the stock indicates his thorough ability in that capacity. He was formerly employed under Peter Bisset at Twin Oaks. JAS. L. CABBERT.

Stray Notes from Abroad

BY T. A. WESTON

The Army Worm and Other Grubs

The reference to the Army Worm on page 639 interested me, because the past Autumn has seen me slaughtering many similar grubs. Hitherto I had never seen these big grubs at work, and I always imagined them to be a species of leather jacket, which they undoubtedly are. The leather jacket grub, which is the larva of the Daddy Long Legs fly is, however, smaller, and it feeds by cutting off young plants at the ground line. The larger forms, however, crawl up the plants, and I lost the tops of many of my prize border Carnations and Pansies before I discovered the depredator.

They are fearfully voracious, more so than the common slug, but fortunately they are less numerous. These grubs are always to be found in turf, and when using such soil for potting steps should be taken to prevent their inclusion. In the open ground one can stamp them out by using some soil fumigant, and frequent surface stirring. Most birds are particularly keen on this species of grub.

Decoction of Tomato Leaves Destroying Greenfly

The statement that a solution made from Tomato leaves will destroy greenfly may or may not be true. Personally I have a notion that I have seen aphids on Tomato plants, but I cannot say for certain. A fly that does worry the Tomato, however, is the white or Ghost Fly, and this pest requires a power of killing, for no ordinary fumigation will settle it. I remember once coping with a small house much infested with the white fly; as soon as the tobacco fumigation was set going, down dropped the flies to the ground, where they laid in thousands—until the fumes were gone, then up they rose again.

That certain plants are obnoxious to some insects, is undoubtedly a fact, for many gardeners make a point of sowing Broad Beans between Gooseberry bushes to prevent the Gooseberry sawfly attacking the bushes.

In the same way, Elder houghs laid amongst Gooseberry bushes will ward off the sawfly and its terribly destructive larvae.

On Sweet Pea Naming

The paper on Sweet Pea naming, read before the N. S. P. S. conference by Mr. W. J. Unwin, is interesting in several respects. One noticeable feature is the reference made to unfixed varieties; it goes without saying that unfixed has caused more trouble and bitterness than any one thing. How much so can be gathered from Mr. Unwin's suggestion that all varieties, before being eligible for competition at the national shows, shall be proved at the trials. Seeing that Mr. Unwin is himself a raiser, and a successful one to boot, it may be taken for granted that he is in dead earnest.

That something must be done cannot be denied, and the latest move on the part of some firms serves to make it imperative. More than one firm is now quoting the

percentage of fixity of the sorts they catalog, while others speak of certain sorts as not quite fixed. This may seem a clever notion, and appear beneficial to the buyer, but it will only serve to incite the introduction of unfixed novelties. Raisers will be able to shelter themselves by quoting a certain percentage of fixity and, therefore, they will scarcely need to worry about total fixity before sending out novelties.

Just think of it, my worthy friends; there are fully nine dozen British and American Sweet Pea novelties quoted from 1910, and there is already some talk of next season's sorts. One firm talks of introducing a new and telling variety in the coming Autumn, yet this novelty was only fixed to the tune of 5 per cent. in the 1909 trials.

A Fine New Yellow Rose—Rayon d'Or

Seeing the reference to new French Roses (page 18) prompts me to suggest that growers should make a note of Rayon d'Or. This is a new seedling of Pernet Ducher's and, I believe, is a strongly scented H. T. that will give Marechal Niel a shake up. The raiser says it is the finest yellow yet raised, and a visitor to these famous French nurseries describes it as the Rose all have been looking for these past 20 years. It is not yet in commerce, but will possibly appear in 1911. I have marked Rayon d'Or down myself, for it will outdo the Lyon Rose, 'tis said.

Aster Beauty of Colwell

Relating to the new double Aster Beauty of Colwell, I may say that I have not heard of its being inconstant in this country. It is not improbable, however, for more than one composite flower or composite species has a tendency to vary through various causes. The Chrysanthemum is a case in point, and not a few Dahlias will run semi-double after the first flush of bloom.

Cultivation and climatic conditions possibly have something to do with these variations. Regarding Asters, while Beauty of Colwell is the first acknowledged double, there are one or two sorts which show a tendency to double early in the season. Miss Gainsford, a fine free flowering light lavender sort, was distinctly double with me last Autumn but, after a brief period, the several rows of florets fell back and the center disc became prominent. Under the circumstances it would be inadvisable to discount the nature of Beauty of Colwell. In another direction I might mention Galega Hartlandi. This charming hardy plant, when in flower differs but little from the old Goat's Rue, Galega officinalis. In its early stages, however, Galega Hartlandi has beautifully variegated foliage, making it a telling foliage plant until it reaches about one foot in height. After this the variegation disappears, and for the rest of the season the plant is quite normal.

Sterilized Soil

I may say that many of our big market growers sterilize all soil used under glass. The fearful losses among Tomato and Cucumber growers has brought about the adoption of the system, and some growers who sell small plants state in their adverts. that all stock is free from disease, being grown in sterilized soil.

There are two systems open to growers, steam and chemical.

A steam plant has to be specially fitted up, and there is no question that all disease spores, insect pests and weed seeds are destroyed by this system. Eelworm is the greatest curse of the present day, much of it being introduced by way of the manure. I am endeavoring to get figures relating to this system of sterilizing.

Chemical sterilizing is more or less effective. We have a number of soil fumigants, Vaporite, Apterite, Killogrue & Cliff's Insecticide being of this class. The value of the first named I have proved; for destroying all soil insects it is remarkable. It has been on the market for several years and is used at the rate of 2 or 3 cwt. to the acre. The others are newer introductions, but the basis of all of them is naphtha, I should say. Not all plants like them, however, for the fumes percolating through the soil are injurious to some. Violets in frames have been sadly injured through the use of one of the newer fumigants, and I have found that border Carnations dislike Vaporite. A sterilizer well spoken of is a chemical called Azene. Mixed with the soil it destroys all fungus germs and insects and makes plants immune to disease. It will not kill weed seeds, however, and this is where steam scores.

Poppy Charles Darwin.

— A fine rich, dark purple variety, petals smooth edged, each adorned with a large, velvety black spot proceeding from the base; a dense wreath of white anthers furnishes a fine contrast.

One of Ernest Benary's (Erfurt, Germany) Novelties for 1910.

Headquarters for Easter Plants

AZALEAS One of Our Specialties

PREPARE FOR EASTER

Have Azaleas to burn, the best in the land, the best in the land, the best in the land,
Azaleas in finest colors, to beat the band, to beat the band, to beat the band

If you would know the fairest sight your eyes can ever see, Where the most perfect plants are grown, to Aschmann's come with me. Why? Ne'er since flowers began to bloom was such a glorious show. Of all the best that florists need found in one place to grow. The Lilies are the very best yet seen on Easter day. Azaleas are whole sheets of flowers, perfect in every way. The Araucarias matchless are, so are the Ferns all green, With bulbs and plumed Spirea, the best you've ever seen. And Aschmann gives a challenge, let every florist hear. For flowers, or prices, either, no rival does he fear. If you wish to gather dollars like violets in the Spring, Then send your largest order; his plants the cash will bring.

CHANGING DON'T PAY!!

From whom will you buy your Easter plants? "I have no cause to change," several sensible men in the trade remarked the other day. "Our friend, Godfrey Aschmann of Phila., has been our reliable man of the past and shall, of course, be this year also."

Large Azalea Indica

In large sizes we have the following varieties: Bernard Andrea alba (white), Niobe (white double), Dr. Moore (double pink), Memory de Van Houtte (large-flowering double pink), Mme. Van der Cruyssen (double pink; one of the best known varieties), Helena Teilmann (rose; very attractive), Empress of India (double variegated), Schreverianna (double variegated), Apollo (red), all covered with buds. Price: \$1.50, \$2.00, \$2.50 to \$3.00 each.

In smaller sizes we have: Empress of India (double variegated), Simon Ardeus (double pink), Vervaeckiana (one of the old standard double variegated), Apollo (red), Mme. Van der Cruyssen (pink; the standard of all the pinks), Deutsche Perle (double white), Schreverianna (double variegated). Price 60c, 75c, \$1.00, \$1.25 to \$1.50.

Prof. Wolters, one of the so well known bright variegated, \$1.00, \$1.25 to \$1.50. Niobe, double white, 75c, \$1.00, \$1.25, \$1.50, \$1.75, \$2.00, \$2.50.

AZALEA Indica, one of our specialties for the last twenty-five years. Raised for us under contract by our Azalea specialist in Ghent, Belgium. Our stock of Azaleas that we ship is well known to our customers; it is the cream of Belgium exportation—full of buds.

What is the best pink variety? Mme. Van der Cruyssen is the name; originated by Mr. Van der Cruyssen of Ghent, Belgium. This variety is too well known by nearly every florist in America to be further talked about. All are as round as an apple, covered with buds.

Do you want to know why our Azaleas are good? Here is the pointer: We don't make a practice of selling them in the

To save express charges please state if wanted in or out of pots. Cash with order, please. No references will be investigated in these busy times.

GODFREY ASCHMANN

Wholesale Grower and Importer of POT PLANTS

1012 W. ONTARIO ST., PHILADELPHIA, PA.

Please mention the Exchange when writing.

Fall, having the rubbish left for Easter, but plant them all as soon as unpacked into 6-7 in. pots, keep them cool and give them the best attention for Easter sales. Those not having many buds are kept over for another year. For example: We import Bernard Andrea alba, Niobe and a few other varieties which do not carry good over their sea voyage; this variety never fails to bloom in the second year.

KENTIA Forsteriana. Imported last Spring (1909) from Ghent, Belgium, in fine condition, 6-7 in. pots, 35-40-60 in. high, \$1.25, \$1.50, \$2.00, \$2.50 to \$3.00; 4 in., 20c. Belmoreana, 5-in., \$1.25-\$1.50 each; 4-in., 25c; 3 in., 10c.

NOTICE: LILY BULBS of the larger size (9-10 in.) were very scarce to obtain last Fall owing to the wet weather in Japan; not even 20 per cent. could be supplied. But our grower in Japan, knowing well our position, has taken good care of us, and we were able to supply our order to receive 5000 of 9-10 in. bulbs from him—our full order of last Spring.

EASTER LILIES, Japan Multiflorum, of our own importation, raised from special 10-in. bulbs, 6-in. pots, right for Easter. The large demand for Lilies exceeds the supply every year; we, therefore, ask that you order early. Price, plants with five buds and upwards, 10c. per bud; plants with under five buds, 12c. per bud. We can satisfy all wants if ordered soon.

NO PROFIT IN LILIES.

Owing to the small profit in the growing of Easter Lilies, an order for a reasonable amount of other stock should accompany all orders for Lilies.

CINERARIA Hybrida. We have a house full, 125 ft. by 21 ft., of the choicest colors—Henry F. Mitchell Co.'s best strain, just right for Easter, 5, 6, 7, 8 in. pots, medium height, 20c, 25c, 35c, 50c, 75c, to \$1.00. Just right for Easter sales. Same are in bloom now for immediate sale, if you wish.

BEGONIA, New Improved Erfordii, Always in bloom, Summer and Winter, 4-in. pots, very strong, \$2.00 per doz.; 5 1/4-in., in bloom and bud, 25c, \$3.00 per doz.

PRIMULA Obconica, 6 1/4-in. pots in bloom, \$2.00 to \$2.50 per doz.

FERNS for dishes, 2 1/2-in. pot, \$6.00 per 100.

Have some white Azalea Deutsche Perle and Vervaeckiana now in bloom if wanted, at 75c and \$1.00 each.

Hyacinths. Raised from first-class bulbs of our own importation. These Hyacinths cannot be compared with ordinary stock raised from cheap bulbs floating the market. King of the Blues (dark blue), Grand Maître (lavender blue), Gertrude (pink), and La Grandee (white). 4-in. pots, \$12.00 per 100.

TOURNESOL TULIPS. Red or yellow variegated. This is the best selling double Tulip in the market. Will stay in bloom in good condition ten days. Three bulbs in one 4-in. pot, \$1.50 dozen pots or \$2.00 per 100 pots. Merillio Tulip, best double pink, 2 bulbs in a 4-in. pot, \$1.75 to \$2.00 per doz. pots.

Double Von Sion NARCISSUS. The best yellow Narcissus in the market, sells at sight; three double-nosed bulbs planted in one 5, 5 1/2 to 6-in. pots. Price, \$2.00, \$2.50, \$3.00 per dozen pots.

IPOMOEA Noctiflora. Best pure white Moon-vine in market, very fragrant and as big as a saucer. On this variety we have a world-wide reputation as growers and shippers for the last twenty years. Price, 2 1/2-in. pots, \$5.00 per 100. 10,000 are now ready.

COCOS Weddelliana, 3-in., 15c.

BEGONIA Flambeana. Sells at sight, 4-in. pots, 20c; 5 1/2-in. pots, 25c.

FIGUS Elasticus or Rubber Plant. Home-grown and Belgium stock, 6 to 5 1/2-in., 25c.

LATANIA Borbonica, 4-in. pots, 20c.

HYDRANGEA Otakea. Already forced, in bud, just right for Easter, 6 to 7-in. pots, 25c, 40c, 50c, 75c, \$1.00 to \$1.50 each.

SPRAEA Gladstone, 5 to 7-in. pots, large stuff, 50c, 75c, to \$1.00 each. We have a house full of this Easter novelty, in better condition than ever—full of buds, just right for Easter. Order in time. Remember: Good Spiraea are scarce this Easter! Why? Owing to the bad weather in Holland.

FERNS, Todeaoides and Whitmanii, 5-7 in. pots, 50c, 75c, to \$1.00; 6 to 5 1/2 in., 35c, 40c.

Florists' Club of Washington, D. C.

The Club met at the store of Gude Bros. Co., 1214 F st., on the evening of March 1, with a large attendance. The special feature of the evening was the election of officers for the ensuing year; in accordance with nominations made at the last meeting and as previously published. The report of the committee on the last entertainment of the Club was held over, owing to the absence of some of the committee. Election of officers was the next business. Pres. Kramer declined his re-nomination for the office of president, having already served two years. Geo. H. Cooke also declined to run on his nomination, therefore a unanimous vote resulted in favor of John Robertson, who was loudly applauded and freely congratulated. E. C. Mayberry was unanimously elected vice-president, his election also being received with evident appreciation. The vote for secretary was by ballot, and resulted in the election of the present incumbent of the office, O. A. C. Oehmler, who has served one year. The three directors for two years were elected as follows: W. W. Kimmell, O. A. C. Oehmler and David Bisser. It was moved, seconded and the motion carried that a committee of five be appointed to select a place for the annual banquet to be held on the next meeting, night, April 5, and Geo. H. Cooke, John Robertson, E. C. Mayberry, F. H. Kramer, and W. W. Kimmell were appointed. This committee was voted full power to act and make all arrangements. Refreshments were served after the meeting, consisting of soft drinks and sandwiches, etc. At the close of the business meeting the Club was favored by Mrs. Naecker with the songs, "Roses," "Shine On, Silver Moon," and other songs, in an entrancing manner. Messrs. Shusbaum, Merritt and a florist, S. Naecker, of Clarksburg, W. Va., also contributed.

Albany, N. Y.

Business during Lent has been rather quiet, not very much activity going on in the social line; this makes the demand for cut flowers very small.

Flowers are plentiful at present; bulbous stock coming in plentifully of all kinds.

Funeral work in the past week has been quite good and had a tendency to use up considerable stock.

Every florist in our city is looking forward to a big Easter trade; we hope to be favored with good weather as all wholesalers and retailers are well stocked.

The Albany automobile show opens March 7 for a week at the State Armory. Some of our florists have orders for decorations of Palms, Laurel and Southern Smilax; it promises to be a great affair.

The Albany Florists' Club held its regular monthly meeting March 3; a smoker wound up the rather active session.

Visitors in Albany the past week: J. Karins, with H. A. Dreer, Phila.; C. S. Ford, Phila., Stephen Green and W. Lake, both of Philadelphia.

W. C. K.

Middletown, Conn.

F. B. Fountain & Co., 399 Main st., have some 2000 sq. ft. of glass at the rear of their store; in which they grow and display bedding stock and Carnations. Mr. Fountain is somewhat of a camera man and handles a line of cameras and supplies along with his floral business.

Geo. Batty has some 2500 sq. ft. of glass on Ferry st., and a store at 438 Main st., where he retails all that is grown in his greenhouses, principally bedding stock.

O. Keser of Portland has been here for 7 years, coming here from Philadelphia. The greenhouses are known as the Riverside Greenhouses, and are directly across the river from the range of A. N. Pierson, Cromwell, Conn. Mr. Keser grows all stock except Roses in some 13,000 sq. ft. of houses. Landscape work is a prominent part of this establishment.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, not necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names correspondents should send some lower leaves of herbage plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, it stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing, it would often enable identification of specimens difficult to determine otherwise.

(58) **Cinch Bugs on Dahlias**.—In reply to question No. 51 in the last issue of the Exchange "Cinch Bugs on Dahlias," I beg leave to say that the best preventive that we have found, so far, for this pest is to spray about once a week during the blooming season with a weak solution of Sulpho Naphol, the odor seems to drive them away. This we have found effective both in the case of Chrysanthemums and Dahlias troubled with cinch bugs, and for the rust on Hollyhocks the same will be found a perfect antidote, but the fresh application must be made early in the season, the object being to keep the spores from striking into the leaves at the time the Winter spore sacks burst. A. M. L.

(59) **Lava Fertilizer**.—Would like some information from users of "Lava" fertilizer as to their success or otherwise with same. I have used it one season but it may be I did not use same properly.—W. H. S., Conn.

(60) **Roses Not Doing Well**.—Under separate cover I send you a plant taken from a bench of Bride Roses. They were planted in the bench about June 1. Until about the last of September we just let them grow, pinching out the buds as soon as they began to show color. After that time we let them bloom and would cut the stems back to one or two good eyes. They have bloomed pretty freely especially up to Christmas, but don't think they are doing as well as they ought and the stems are as long as we want. Please give us your opinion and advice about it. We want to start some Bridesmaid for next year. Could we have better blooms by getting them in 4-in. pots now, putting them in 6 in. until June 1 and then putting them in the bench, as it will not be ready before that time? Could you give us some idea as to the number of Roses per month we could get from a bench of three hundred.—G., N. Carolina.

—As your plants did so well up to Christmas it is to be expected they are now taking a short period of rest. You have not mentioned cultural methods, and we judge from the appearance of the plant sent here, that proper feeding has been neglected. Plants put in benches last June should have regular applications of various kinds of fertilizers at least once a week. We would suggest that you buy young grafted plants in 3" pots to grow on, ready for planting next June. These will more than repay you for the extra cost, both in vigor, health and productiveness, a point with which all the large Rose growers will agree. These grafted plants can be secured from advertisers in our columns. We have no data at hand showing the number of cut Roses per month which may be obtained from plants.

(61) **Best Market Varieties of Violets**.—Will you kindly inform me whether there is a double Violet on the market superior to the Marie Louise or the Campbell, (1) in quality of flower; (2) in productiveness; (3) in vigor of constitution? Are the double Violets grown by the best growers for the New York market, still the above varieties? If you say there is a better double Violet than the above will you kindly tell me where stock can be procured?—H. B. S. Washington.

—The two best varieties of Violets for the New York market are Marie Louise and Farquhar. The Campbell Violet is a favorite in the Philadelphia market. The first named is popular for their good color, fragrance and keeping qualities, and stock of these can be procured from advertisers in our columns.

NEW HAVEN, CONN.—The Morse Floral Co. has moved from 37 Church st. to 168 Orange st.

Carnations

Facts of Interest to the Average Grower

If there is any one time more preferable than another for propagating the Carnations, it is right now, and especially is this the case with the retail grower, the one who, while depending largely on Carnations during the Winter months to help face the coal man, is obliged to give his attention to so many other things the rest of the year; his really busy time begins just about now, and it will be a continuous "go" until July 4. That's when the man who handles only two or three things and makes specialties of them gets the best of him; the specialist has a chance to pay at all times the proper attention to the young stock, and this, in order to be successful, is so necessary. We propagate during December or early January a batch of Carnations; we have the cuttings on hand, have the room and are perhaps not rushed with work, but what about them later on? In many cases with the retail grower these plants are stunted long before they go to the field. A Carnation cutting rooted in December, if it is to be kept growing as it ought to be, should by the end of April be a nice plant in a 4-in. pot. Now there are places throughout the middle West, in which lots of Carnations are grown, where May 1 is even a little early to plant out, and the young Carnation stock, of which so much is expected, is found standing for months in 2 or 2½-in. pots on some bench. Many of us are tempted during the Spring months to give the stock which is expected to bring, in a few weeks, a cash return the preference. Stock rooted the end of February, if potted up and not otherwise neglected, will make the very finest plants for the field, away ahead of any which have been propagated earlier in the season and are just kept alive in small pots, waiting to get to the field.

Geraniums

2½-in. Pot Plants in Bloom for Easter

If there is a batch of 2 or 2½'s which are to be shifted into 3½'s it will pay to go over them to select a good number which have buds just about showing color. These, if put aside, will make ideal material for made-up pans for Easter; while a customer will prefer something else outside of a Geranium when in want of a flowering plant during the Winter months, yet a well filled dish containing 8 to 10 S. A. Nutt Geraniums out of 2½-in. pots sells at Easter and brings a good price—and why shouldn't it? Here, as in all other lines, the customer has not seen Geraniums in bloom since last Fall, and more than ever welcomes them again. Set aside a good number, including every color; they don't need to be made-up until a few days before Easter. If this is done in such a way as not to disturb the roots too much, any that should remain unsold can be lifted and potted up without the least check. We all know that Lilacs are the main thing at Easter, and if any customer comes to your shop to buy one nothing else, usually, will do, and yet the larger the assortment the more will be sold; and though white is the color for that day, there is plenty of call for pink and red colored flowers. The average retail grower can dispose of quantities of Geraniums, and at better prices than he would realize for larger stock two months later; and I call attention to it now because, usually, when giving the small stock of Geraniums a shift, many growers remove the flowers or buds if there are any, which at this time of the year is the right way, as the plants should grow now and not bloom.

Easter Preparations

Order Your Pans and Dishes Now

This is just going to be a reminder, intended to save, or rather avoid trouble. It is the ordering of pots, pans and dishes of the various sizes for the Easter trade. At no other time of the year have we more call for blooming stock in pans and dishes than for this holiday. If one has a surplus of pottery on hand after Easter not much harm is done, but what an annoying experience to find yourself short of certain sizes a day or so before Easter Sunday. It is bad enough if you are near a large town where a telephone message is all that is required to bring relief, but the out-of-town florist should never be found in such a position. Your potman will ap-

Dreer's Special Offer of Palms for Easter Decorations

Selected Stock of Excellent Value

Kentia Forsteriana

For a more complete list of sizes, as well as for a full line of other seasonable stock, see our current Wholesale List. The above prices are intend d for the trade only

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA

Please mention the Exchange when writing.

preciate your early order, don't wait any longer; order at once, and plenty of each size. It is also well to look over the stock of 2½'s, as well as 3's and 4's. Every potter will be busy from now on, and might be unable to fill an order as quickly as we would like them to. Allow sufficient time and avoid the experience of having a few thousand Geraniums in 2½'s badly awaiting a shift and no pots for them. Have the pots where you can lay your hands on them. How about the supply of flats? They come in so handy during our Spring months. We all have a way of our own regarding size, shape and material, so much depends on local conditions—but now is the time to prepare a good supply, in fact it ought to be on hand already.

Climbers from Seed

Proper Time for Sowing Now

With all the beautiful hardy climbers we have to select from, the florist has still use for annuals, and the Cobaea heads the list of the many of which we make use. It is a clean grower, hardly ever infested with an insect pest, and a rank grower, and while its flowers are not very showy, there is no other climber which really can offer so many good points. We have had years where the end of the bedding season found us with quite a number of good plants still on hand, only to find ourselves short the next season when growing less. A well grown Cobaea needs all of three months to develop. You can get a plant in a 4-in. pot with a thin straggly growth ready in much less time, but as a bushy plant, which has been pinched back several times, nicely tied up on a strong stake, three to four feet in height, is the way to have them. Use flats for sowing the seeds. A light sandy soil will help to prevent the rotting of them; press the flat seeds in edgewise, and if kept in a 55° house, with a little bottom heat, 90 per cent. of the seeds will germinate, if fresh. Of other annual climbers raised from seed I might mention the variegated Hop Vine, Humulus Japonicus variegata, as desirable, on account of its beautiful colored foliage. It is one of the rankest of growers. Lophospermum scandens, which really is Maurandia scandens, is another great climber, and should be sown at once in order to get large plants.

Hardy Climbers in Pots

It pays to handle this class of plants

While speaking of climbers, it might be well to say a few words of the hardy section. Every retail florist, practically, has call for more or less of them, and while it might be hard to get more than 35c. or 50c. for a well grown Cobaea a customer will not object in the least to paying 75c. to \$1. or often more, for a

Clematis or Climbing Rose, for she buys a hardy vine when so doing, which is supposed to last for years to come. With the exception of a few varieties, you can buy from your nurseryman most all of the better known climbers at from \$10 to \$15 per 100, and you should carry a good assortment. Now a Boston Ivy, even a strong 2 or 3 year field grown plant, when dormant, looks awfully small, and so with many others, the label, the Spaghnum and burlap around the roots is about the only attraction; but when potted, and a few weeks in the greenhouse, it isn't as all hard to dispose of them and at good prices, therefore it pays to get a good stock into shape, and let your customers know you have it. Plants potted up next month, kept in a Violet house temperature, where they will come along slowly, will be in fine shape for planting out any time during Spring, Summer and Fall.

A Few Hardy Climbers

Such as the Average Florist Should Handle

It might be of help to the beginner, or the florist not much acquainted with the hardy vines and climbers, to name a few of the ones for which we have the most call. There is, in every place, call for the Boston Ivy—Ampelopsis Veitchii; you needn't cut them back when potting them, tie them up nicely and let them leaf out, but every plant should be pruned back to 5 or 6 inches from the roots, when planted out against the wall, or whatever the plant is supposed to cover, for only the young soft growth will cling to the wall. In Clematis, the best known is paniculata, the small white. Jackman is the large purple, and Henri the large white. In the Lonicera or Honeysuckles we have the Halleana, one of the best, the Gold Leaf and the Red Coral, all good. Akebia quinata is fine where small foliage is desired. Dolichos Japonicus, the celebrated and most advertised Kudzu Vines, has large bean-leaf-like foliage, and grows 40 feet in one season. Wistaria are in as much demand as ever, and so is the Trumpet Creeper, Bignonia grandiflora. The Dutchman's Pipe and Matrimony Vine always sell, and so do the many fine varieties of climbing Roses. Another fine creeper is Euonymus radicans; its aerial roots cling to almost anything, and it has proved perfectly hardy in northern Illinois. Now is the time to place your order with the nurseryman for any wants in this line—do it while you think of it.

Seasonable Hints

Of Importance to the Retail Grower

With us, every hand is busy, and will be so more and more every day from now on, with the preparations for the

bedding season. The one thing which has been in favor thus far has been the weather; hard freezing and snow have made outdoor operations impossible. There are but few retail growers who haven't lots of outdoor work of some sort, and the moment things open up outside in Spring this work begins, and only too often matters are neglected inside. We sow out all kinds of seed, even transplant the young stock, all with good intentions, but before May much of this work will be found to have been done for nothing, as on account of there being too much of it the young stock has been stunted. Only too often do we undertake too much, and this is not only a mistake made by the beginner, who can be pardoned for it, but it is so with the man who has been years at the business. The lack of proper and sufficient help at the right time is the trouble. With this in mind we should start out right now to not only try but actually keep even, or nearly so, with the work. To keep ahead of it is not possible; there may be a day when at a first glance everything seems to be finished, for a few minutes at least, but it won't require much investigation to find that a dozen different things are waiting to receive attention. The good grower will arrange things so as not to let flats full of Verbena, Salvia or Pansies suffer and become worthless before we find time to transplant them. Don't start out with too big a load to carry. The motto "Grow less but better" is fit for everyone of us. There are a few firms in the country who find it profitable to grow tens of thousands of certain varieties, and run their places almost like a manufacturing concern, but with the smaller grower, quality ought to be the watchword, for when it comes to growing a hundred different things in a limited space, each one having peculiar characteristics of its own which have to be catered to, only the real gardener has a chance to show what can be done. Plan so as to do the work with as little expense as possible, but don't spare the proper help it requires to do it right. Don't lay off hands because business is dull, that is all right for a store, but in the greenhouse the amount of work to be done should regulate this. You are going to do any amount of business next May if you have the proper stock, so have sufficient help to prepare it now.

LINCOLN, NEE.—Yule Bros. of this city have acquired a third interest in the C. F. Harrison Nursery at York.

PITTSFIELD, MASS.—R. Engleman on Feb. 18 lost about 500 sq. ft. of glass in his greenhouse, through the weight of snow.

MARION, IND.—The Maple Heights greenhouses recently owned by Mrs. Alfred Butterworth have been sold to David Rudical.

OUR READERS' VIEWS

Gladiolus Society Wanted

Editor Florists' Exchange:

I notice in your issue of February 26 a communication from Mr. Vaughan regarding a Gladiolus society. I agree with him that the time has come when we ought to do something along this line. We have so many societies connected with the trade now that it is a question in my mind whether it would be wise to add another. But it seems to me that if the Society of American Florists would interest itself in this matter and provide for a Gladiolus committee or section, with the idea of having all new varieties passed upon by this committee before they are accepted by the general trade as being varieties of merit, it would be an excellent thing for all concerned. The Society of American Florists can easily do this, as at the present time their convention comes in August when Gladioli are at their best.

It was my privilege last Summer to watch and study some 2000 varieties blooming on one piece of ground, a collection brought together from all parts of the country, which offered an unusual opportunity of judging of the merits and demerits of many kinds. It goes without saying that the vast majority of the varieties were kinds that never ought to have had a name. There were kinds that have been introduced and exploited as being the very best in whites, pinks and other colors, for which high prices were asked, but when they came in bloom very often they did not compare favorably with kinds that have been introduced in years gone by and are now selling for very much less money. Then again, there were several different kinds under the same name, and in other cases a variety would be under anywhere from two to four names.

I, for one, would be very glad, indeed, to see something done to straighten this matter out and put the Gladiolus on a footing with such flowers as the Rose and Carnation.

I. S. HENDRICKSON.

Estab. John Lewis Childs, Floral Park, N. Y.

Parthenocissus Tricuspidata

Editor The Florists' Exchange:

In Jan. 8 issue of The Florists' Exchange (page 49) there is, to say the least, an unjust, criticism of one of the staff of Kew Gardens, London, Eng., who has been held responsible for the above name in place of Veitch's Ampelopsis, as published in The Gardeners' Chronicle, page 814, 1868; that is to say, the name by which the plant Ampelopsis Veitchii has been so well known to the gardening world; but it must be borne in mind that this name has not received the sanction of any botanist who has carefully studied the Ampelidaceae. It may interest plantmen and other readers of The Florists' Exchange to know that according to the December number of Curtis's Botanical Magazine (which, by the way, is evidently considered worth quoting by such magnificent libraries as the Congressional at Washington, the Peabody in Baltimore, the Carnegie in Pittsburgh; in fact, wherever librarians have to cater to students of botany who want to know the facts about plants) the plant in question has already received the following names in addition to that mentioned above: Parthenocissus Veitchii, Ampelopsis tricuspidata, Ampelopsis Roylei, Ampelopsis Japonica, Cissus Thunbergii, Cissus Veitchii, Vitis inconstans, Vitis capreolata, Vitis Veitchii, Vitis Japonica, Quinaria tricuspidata, Psedera tricuspidata. These names have been given the plant by different botanists in Germany, France and England, and probably elsewhere (we believe one named Psedera tricuspidata emanated from a gentleman connected with a well-known institution in America).

It is not so long ago that a writer in The Florists' Exchange was protesting against adopting any name or names that emanated from Kew on the ground that the Kew authorities were lumpers; that is to say, lumped the species that the florists had a bread and butter interest in. Now that the Kew authorities are attempting to place a plant where it properly belongs, without disturbing existing nomenclature any more than is absolutely necessary, it seems to the writer that their hands should be upheld in the great work they are doing, especially when it is realized that the wealth of material which can be investigated by them, both of living and dried plants, is undoubtedly superior to that of any similar establishment in the world, in addition to which they seem to have adopted the sound policy of only changing existing nomenclature when it has been conclu-

sively shown by a botanist who has carefully monographed a genus or family of plants that the existing nomenclature was wrong or partly wrong.

But here is what the botanical magazine referred to has to say about the plant:

"Nearly allied to the familiar Virginian Creeper, Parthenocissus quinquefolia, which also has viscous tendrils tips. The plant here figured, when brought in general cultivation, in 1868, by Messrs. J. Veitch & Sons, was distributed as Ampelopsis Veitchii and A. Japonica. Quite recently, authorities, so careful as Koehne and Graebner, have once more endeavored to discriminate between these two plants, but it is generally conceded that they represent no more than two states of a single species, for which the most familiar garden name is Ampelopsis Veitchii."

In works which accept the view enunciated in the Genera Plantarum, where the genus Vitis is made to include all the Ampelidaceae except the species of Pterisanthes and of Leea, the plant is known as Vitis inconstans, a name which is, however, somewhat less familiar than that under which it was issued by Messrs. Veitch. But this view is almost universally considered too comprehensive, and writers who, like Mr. Sprague, follow the careful monograph by Planchon, where the Vitis of the Genera Plantarum is subdivided into nine distinct genera, are precluded from using either of these familiar names. Our plant is neither a Vitis in the narrower sense in which that name was originally and is now again more satisfactorily employed nor a genuine Ampelopsis.

It is a member of the genus which Planchon has termed Parthenocissus, readily distinguished from the other genera of Ampelidaceae grown out of doors in this coun-

A St. Patrick's Day Window

try, by having viscous tendril tips, by the absence of tendrils from the inflorescence and by the glandular hypogynous disk being entirely adnate to the ovary.

Incidentally, gardeners, nurserymen and others who are so apt to criticize botanists for changing of plant names, should remember that scientific names and descriptions are the means of making these known to the world much more largely and correctly than any popular English names could do. As an instance, some years ago the writer of this was inquiring of persons whom the writer had every reason to believe had a good knowledge of the popular names of the local flora in that State, and was told that the Virginia Creeper was plentiful around there and that it bore red or nearly that color flowers. This was news to the writer, as he had always supposed it was known in nurseries as Ampelopsis quinquefolia or Ampelopsis Virginia. It turned out that this "red-flowered" Virginia creeper was none other than Tecoma radicans, and the writer has found, after inquiry in some seven or eight different States that English or popular plant names are altogether unreliable as a means of identifying wild plants or even cultivated plants.

I trust, Mr. Editor, you will see your way clear to publish this fuller information about such a widely known plant as this elegant creeper, which has literally been sold by the millions since Messrs. Veitch first introduced it.

Md.

WEST BRITON.

Some day, not far off, either, all Retail florist will appreciate the advantages of this Department. But why wait? Break the ice now, on what may interest you, and write us freely. Correspondents solicited. Good photos wanted.

A St. Patrick's Day Window

What would be an appropriate and attractive window effect for St. Patrick's Day? It is a thought often expressed by the up-to-date florist. I would suggest the setting shown in the accompanying sketch, which is both novel and effective. It is carried out as follows: First hire four 8 ft. flags, two American and two Irish. Hang the Irish flags perpendicularly from the rear of the window ceiling, at an equal distance from either side, then catch them about six feet down and fasten with a green ribbon to either side of the window casing. Hang the American flags over these in the following manner; catch the two unions together, tie them at the top with a cord, and fasten in the center of the ceiling, but well in the background, allowing the ends to fall gracefully over. Now catch the ends and bring them up to the sides, leaving a flap at each end, which will produce graceful folds in the center. Next cover the wall side of the window with a light green sateen, from top to bottom, and over this hang garlands of Asparagus plumosus, caught up at the outer edge four feet down from the ceiling, and tied with a broad green ribbon, leaving a streamer four yards long—which will be utilized later on—and a shorter one about a yard and a half long. Also hang garlands of Asparagus along the ceiling, as shown in the illustration. You now have the ceiling and upper side wall effect. The next step is to cover the floor with a rather dark green cloth. Now make a mantelpiece in the following manner: Take two boards 4 ft. long, 9 in. wide and 1 in. thick, also two boards of the same width and thickness in 2½ ft. lengths; stand them on edge and nail one short board to the longer one, parallel, at a distance of seven inches outside measurement with one end even. Use two strips on each side, 2 in. wide and 1 in. thick, countersunk and flush with the edge, one at the base and one two feet up. Now stand them upright and nail a 3 ft. board on top, from one 4 ft. upright to the other, thus forming a sort of square, with two smaller uprights inside. Now cut a part circle from a board 9 in. wide, 24 in. long, using the width of the board as the depth of the curve. Nail this from the top of one inside upright to the other, flush with the edge, forming an arch. You now have the mantel frame. Cover this neatly with dark green velvet and place it parallel with the wall. Next make a mantel board just an inch or so longer and wider than the mantel; nail it on top of same, and bank with pots of Adiantum Farleyense, placing a 3 ft. Kentia at the rear end. Now put two vases filled with water, in which green dye has been placed, back of the Ferns, and put a dozen white Roses in each, where they will suck up the dye and assume a pretty greenish hue. Place a good-sized Scottii Fern in the center of the arch or fire place. Now bring the four-yard streamer of ribbon, previously mentioned, over from the front to the small Palm or top of the mantel, making a three-loop bow. You now have a good representation of a dining room mantel banked with Farleyense Ferns and green Roses. Next place a 4-ft. circular table, with covers for four people, using plates, glasses and knives and forks. Take an 8-in. center piece, plant it with Shamrocks and insert twelve Orchid tubes among the same. Fill with water and green dye. Put one white Carnation, which has been previously placed in dye over night, in each tube; now lay long sprays of Asparagus Sprengeri on the table cloth, spreading from the center piece outward. Take some 2 in. green ribbon and make a bow, tied with wire on a Rose stick, and insert in the centerpiece. Bring a streamer over to the edge of the table, making a three-loop bow with one end. Fasten this a little to the right of each cover, making four streamers in all. Next take four good-sized raw Potatoes and slice off the top and bottom of each. Carve out a hole in the center just large enough to place a plant of Shamrock in. Gild them, plant the Shamrocks, and place one on top of each ribbon bow, as favors. Now place two 7 ft. Kentia Palms, one on the right side of the window just in front of the flag curtain, the other on the left side partly behind the curtain. Take a tall vase filled with a dozen long-stemmed American Beauty Roses, and place it in front of the left curtain, putting a small 3 ft. Kentia in front, with a border of Scottii Ferns placed on a slant. Follow the same scheme on the other side of the window, having the large Kentia in front of curtain instead of behind. Now place a row of small pots of Shamrock along the entire outer edge, and put a vase of Carnations, dyed green, in each outer corner, and

March 5, 1910

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres ALBANY, N. Y.
11 North Pearl Street

Wreath Composed of Lilies and Maidenhair Fern
James E. Beach, Bridgeport, Conn.

fill in the background with good-sized Scottii Ferns placed on a slant. Quite an additional effect can be added by pinning gold fringe to the outer edges of the flags; also pin some gold braid, about an eighth of an inch broad, on the velvet of the mantelpiece, following the design as indicated by the dark thin line in the illustration; while suitable little novelties can be introduced in the foreground, being careful not to have too many of them or to have them too high, as this would mar the general dining room effect of the window. The writer in giving the sizes, measurements, etc., in the foregoing description has in mind a window 10 ft. high by 8 ft. wide, which he believes to be the average sized florist's window.

JAS. MEIKLEJOHN.

Holm & Olson ST. PAUL, MINN.
20-22-24 West Fifth Street

Catalogs Received

JOHN LEWIS CHILDS, Floral Park, N. Y.—An 8-page booklet entitled "Gladioli: Suggestions on Forcing Best Varieties, Notes and Remarks."

WILLIAM TRICKER, Arlington, N. J.—A 16-page catalog of Water Lilies and Hardy Old-fashioned Garden Flowers. This is a very comprehensive list of the best things in the lines catalogued. The list of Water Lilies is quite extensive and embraces Nymphaeas, Nelumbiums and Victorias (Royal Water Lilies). The plant section covers many new and rare hardy perennials, Roses and Rhododendrons, as well as many greenhouse and decorative plants.

BOBBINK & ATKINS, Rutherford, N. J.—A 124-page catalog of Roses, Ornamental Evergreens, Conifers, Hardy Evergreen Flowering Shrubs, Weeping and Standard Deciduous Trees, Deciduous and Flowering Hardy Plants, Hardy Vines and Climbers, Spring and Summer-flowering Bulbs, Roots and Plants, Decorative Flowering and Bedding Plants, Pot Grown Forcing Plants, Fruits, and Hardy Herbaceous Plants. The catalog is well printed, on good paper, is profusely illustrated by half-tones, and appears in handsome covers with designs in half-tones of Roses and a Rhododendron planting.

H. H. BERGER & CO., 70 Warren St., New York City.—Spring Catalog for 1910, of Flower and Vegetable Seeds, Roots and Bulbs, Rare Japanese Shrubs and Trees, Roses, Rhododendrons, Hardy Vines and Climbers, Small Fruits, etc. There are several novelties shown, among them a new dwarf Delphinium Chinese, a new strain of Salpiglossis, a new Poppy, a new sweet-scented Dahlia called Coronata, some Sweet Pea novelties, Siberian Edelweiss, Tufted Pansies and Shirley Poppies. The publication embraces 80 pages and is profusely illustrated with half-tones. The catalog appears in covers bearing on the front page a garden view, and on the rear page some Poppies, both in natural colors.

BERTRAND H. FARR, Wyomissing, Pa.—"Farr's Hardy Plants." This is a 64-page catalog of perennials. In it some 16 pages are taken up with a list of Irises—in the cultivation of which Mr. Farr is a specialist—which contains many new and rare varieties. There are ten new seedling Irises listed for the first time, four of them in the Pallida section, including

Cash with order please.

C. EISELE

11th & Westmoreland Sts., PHILADELPHIA, PA.

Juniata, a beautiful clear blue, deeper than Delmatica, with very large sweet-scented flowers. The Peony list, too, is very extensive and occupies several pages. Phloxes, Dahlias, Poppies, and Roses also form prominent sections of the book. There are two color plates, one a view of a Peony field at Wyomissing, the other showing six varieties of Oriental Poppies. There are several half-tone illustrations of good size throughout the book. The catalog appears within handsome covers, showing on the front page reproductions in natural colors of four of the Irises introduced this year, and on the rear page a representation, also in colors, of Peony Cameron.

BLUNDER RIBBONS

are usually cheap Ribbons that look all right until you use them with your decorations, and then you wish you had something different. Something different in Ribbons, are the qualities that bear **THE PINE TREE LABEL**. These are the Ribbons for Novelty decorations, funeral decorations, banquets, weddings, etc.; they are rich toned Ribbons, have a high lustre, are soundly constructed and yet they often cost little more than these Blunder Ribbons.

You will find it pays to use the best Ribbons especially when you can get them at our close quotations direct from the Mill.

Sample swatches will prove values. A postal brings them

OCEAN HEIGHTS, N. J.—M. S. Fleming, proprietor of the Ocean Heights Flower Shop, 1345 Pacific ave., will establish a conservatory at 104 So. Carolina ave.

Japanese Miniature Gardens

Before a transformation scene, the like of which has not before been witnessed in England, a Japanese garden artist of fame explained to me on Wednesday the crowning wonder of the Japan-British exhibition at Shepherd's Bush, and disclosed some of the secrets of culture.

Two separate acres in different parts of the exhibition will be converted, under 100 and more British workmen, into Japanese landscape gardens, representing two of the seven styles or schools prevailing in Japan. On one site the S-shaped lake is already excavated and the 16-ft. hill is rising. Quaint stringed and pecked patterns are dotted over the grass and the structure of the bridges, one over a railway, the others over the lake—are mapped out.

On this acre a whole countryside will be represented; a high waterfall, lakes, hills, trees, grass, flowers, with many other features. The Iris and the Lotus lake are side by side; and the supreme glory will be the Wistarias, some dwarf trees covered with bloom, some wide and spreading. All the plants will come direct from Japan; the Lotus plants and Irises and 16-ft. Maples, as well as the 200-year-old dwarf trees, the stones, and the 300-year-old stone lantern towers, with every bit of lichenous and mossy growth carefully protected. The flowers are coming by way of America, for fear that the heat of the other route should make the Lotus and Irises flower prematurely.

How to grow the dwarf trees has been kept a secret, but Mr. Eida (the Japanese artist) assured me that the secret was continual labor along the following lines: After some years' growth the tap root is cut, then every year the tree is reotted with necessary root trimmings; and, for the rest, growth is arrested by continually changing the tree from dark rooms to light rooms and from cold to hot, with immense care in supplying the exact amount of water. One of the favorite manures is powdered oil-cake, accurately measured out in teaspoons.—W. B. T. in *Daily Mail* (Eng.)

CULTURAL DIRECTIONS

For the benefit of Seedsmen and all who retail Seeds, Bulbs, Trees, Shrubs, Fruits, etc., we have had written by experts over fifty single page leaflets covering the raising and care of these various subjects. Their free use will save your clerks much valuable time. A sample set will be forwarded on application.

Florists' Refrigerators

Write us for catalog and prices, stating size you require, and for what kind of cut flowers you wish to use the refrigerator; also state whether you wish it for display or only for storage.

MRS. C. W. WARD

MRS. C. W. WARD is a perfectly formed flower with full center; color deep pink, several shades lighter than Lawson, deeper than Winsor; having strong, erect stems, 24" to 36" in length. A vigorous, healthy grower, and has never shown disease of any kind.

A very early and free bloomer, producing fine flowers as early as September 1, which bring from twenty-five to fifty per cent. more than any other variety on the market.

Rooted Cuttings, \$2.00 per 12, \$12.00 per 100, \$100.00 per 1000.

25 at the 100 rate. 250 at the 1000 rate.

DELIVERY FEBRUARY 21st

ALMA WARD

This beautiful Carnation is pure white, except during dark weather, when it shows delicate splashes of pink similar to the Cattleya, increasing its popularity.

ALMA WARD is the largest, most fragrant Carnation ever grown, producing perfect flowers 3½" to 4½" in diameter, on strong, erect stems, 36" to 42" in length.

Rooted Cuttings, \$3.00 per 12, \$5.00 per 25, \$9.00 per 50, \$15.00 per 100, \$35.00 per 250, \$65.00 per 500, \$120.00 per 1000.

DELIVERY MARCH 1st.

For Those Who Want to Study Landscape Gardening

In answer to question 45, in issue of Feb. 26, regarding correspondence course in Landscape Gardening, would suggest that J. T. D. communicate with "Home Correspondence School," Dept. H. A., Springfield, Mass. A 250-page catalog will be sent upon application.

L. M. STOWELL.

Cromwell, Ct.

Baltimore

Williamson & Watts, one of our leading drug houses last Saturday offered to the public 1000 bunches of single Violets, 25 in a bunch at 19c. They have once a year Violet day, that combines with their sale of Violet preparations.

Fred Reitz, Woodlawn, Md., who is the heaviest bulb importer, is guessing. He has taken his Dutch bulbs inside to force and is a little afraid he will miss getting them in for Easter.

D. T. Connor, of the Lord & Burnham Co. was a visitor last week, looking for business.
